List of contributors	ix
Preface	xiii
Part I Structures and nature of solids used as supports/catalysts	
1 Inorganic supports and catalysts — an overview	
P. Diddams	
1.1 General considerations	3
1.2 Silica	5
1.3 Alumina	8
1.4 Carbon	14
1.5 Clay minerals	18
1.6 Zeolites	26
1.7 Conclusion	36
Bibliography	37
References	39
2 Organic supports — an overview	
J. M. Maud	
2.1 Introduction	40
2.2 The preparation of organic polymeric supports	40
2.3 The 'nature' of the polymeric support	50
2.4 Conclusions	58
References	59
Part II Traditional organic reactions aided by solid supports or catalysts	
3 Reactions assisted by amorphous inorganic solids — a survey	
M. Butters	
3.1 Introduction	65
✓ 3.2 Selective methods for the preparation of esters	68
3.3 Base catalysis for the activation of 'C-H acids'	69
3.4 Silica gel as a medium for the formation and selective cleavage of acetals and ketals	74
3.5 Reagents and catalysts for electrophilic substitution of aromatic and heterocyclic compounds	76

3.6	Electrocyclic reactions..	78
3.7	Nucleophilic substitutions by oxygen and nitrogen nucleophiles'.	81
3.8	Elimination reactions over solid supports..	85
3.9	Selective reductions over solids..	88
3.10	Oxidation over solids..	91
3.11	Allylic chlorination over silica.	96
	References..	97
4	Reactions assisted by clays and other lamellar solids — a survey	
	J. A. Ballantine	
4.1	Introduction..	100
4.2	Acidity of clays and types of clay catalysts..	101
4.3	Preparation of clay catalysts..	102
4.4	Clay-catalysed organic reactions where the catalyst is acting essentially as a solid acid	103
4.5	Clay-supported inorganic reagents..	116
4.6	Graphite intercalation compounds..	119
4.7	Conclusion	122
	References..	122
5	Zeolite-assisted organic synthesis — a survey	
	M. Butters	
5.1	Introduction	130
5.2	Chemical dehydration; formation of alkenes, enamines, acetals and condensed heterocycles	132
✓ 5.3	Preparation of esters, ethers, and amides assisted by removal of small reactants from reaction equilibria using zeolite molecular sieves..	137
5.4	Separation of isomers and closely related compounds from a mixture..	140
5.5	Selective photorearrangements within zeolite cavities	141
5.6	Electrocyclic reactions..	143
5.7	Shape selective electrophilic aromatic substitution..	147
5.8	Control of alkene addition reactions..	153
5.9	Isomerization and oligomerization of alkenes..	156
5.10	Nucleophilic substitutions of epoxides and alkyl halides	156
5.11	Reduction reactions	159
5.12	Oxidation reactions	161
5.13	Photochlorination of alkanes..	165
	References..	165
6	Reactions involving polymeric resins — a survey	
	J. M. Maud	
6.1	Introduction..	171
6.2	Polymer-supported organic substrates	172
6.3	Polymer-supported reagents and catalysts	174
6.4	Conclusions	188
	References..	188

Part III Solids in biological chemistry and molecular biology**7 Solid phase peptide synthesis****J. S. Davies**

7.1	Introduction.....	195
7.2	Synthetic strategy for peptide synthesis	196
7.3	The automated solid phase protocol.....	207
7.4	Alternative approaches to solid phase synthesis — simultaneous (or parallel) multiple peptide synthesis (SMPS).....	213
7.5	Selected examples of oligopeptide synthesis	216
	References.....	218

8 Solid phase oligonucleotide synthesis**H. A. White**

8.1	Introduction	225
8.2	Applications of oligonucleotides.....	226
8.3	General strategy for oligonucleotide synthesis	226
8.4	Phosphotriester synthesis.....	232
8.5	Phosphoramidite synthesis	236
8.6	Hydrogen phosphonate and 'phosphorothioite' syntheses	238
8.7	The solid phase	240
8.8	Oligonucleotide purification.....	243
8.9	Synthesis of oligoribonucleotides	244
8.10	Problems in oligonucleotide synthesis	246
8.11	Preparation of oligonucleotide mixtures	246
8.12	Preparation of modified oligonucleotides and variant oligonucleotides.....	247
8.13	Future developments	249
	References.....	249

9 Immobilized biocatalysts**J. M. Woodley**

9.1	Introduction.....	254
9.2	Biological catalysis	255
9.3	Biocatalyst immobilization	257
9.4	Techniques for immobilization.....	258
9.5	Implication of introducing a solid support.....	262
9.6	Uses of immobilized biocatalysts	266
9.7	Concluding remarks.....	268
	References.....	269

Part IV Individual applications**10 Hydrogenation and hydrogenation catalysts****M. E. Fakley and F. King**

10.1	Background	275
10.2	Practical considerations	276
10.3	New heterogeneous hydrogenation catalysts.....	277
10.4	Functional group reductions	278
10.5	Future trends	284

10.6	Appendices.....	284
	References.....	286
11	Designing micro-reactors — a personal account	
	P. Laszlo	
11.1	Introduction	288
11.2	From prebiotic chemistry to present-day frontiers of chemistry	289
11.3	The relevance of rocketry and drunkenness to the design of a new oxidizing reagent.....	292
11.4	Concentration effects by clays	293
11.5	Catalysis by clays	295
11.6	The catalytic sites	296
11.7	Conclusions. The significance of clays in a wider context	298
	Acknowledgements.....	298
	References.....	301
12	Microwave activation of reactions on organic solid supports	
	G. Bram, A. Loupy and D. Villemin	
12.1	Microwaves	302
12.2	Application of commercial microwave ovens to organic synthesis in solution.....	302
12.3	Solid materials under microwaves	309
12.4	Microwave-activated organic synthesis on solid supports.....	312
	References.....	324
	Index.....	327
