Preface	xi
<b>1 Introduction</b>	<b>1</b>
1.1 Flask Chemistry	2
1.2 Flash Chemistry	3
1.3 Flask Chemistry or Flash Chemistry	4
References	5
<b>2 The Background to Flash Chemistry</b>	<b>7</b>
2.1 How do Chemical Reactions Take Place?	7
2.1.1 Macroscopic View of Chemical Reactions	8
2.1.2 Thermodynamic Equilibrium and Kinetics	8
2.1.3 Kinetics	10
2.1.4 Transition State Theory	12
2.1.5 Femtosecond Chemistry and Reaction Dynamics	12
2.1.6 Reactions for Dynamics and Reactions for Synthesis	13
2.1.7 Bimolecular Reactions in the Gas Phase	15
2.1.8 Bimolecular Reactions in the Solution Phase	16
2.1.9 Fast Chemical Synthesis Inspired by Reaction Dynamics	17
References	18
<b>3 What is Flash Chemistry?</b>	<b>19</b>
<b>4 Why is Flash Chemistry Needed?</b>	<b>23</b>
4.1 Chemical Reaction, an Extremely Fast Process at Molecular Level	23
4.2 Rapid Construction of Chemical Libraries	24
4.3 Rapid Synthesis of Radioactive Positron Emission Tomography Probes	27
4.4 On-demand Rapid Synthesis in Industry	30

4.5	Conclusions	31
	References	31
<b>5</b>	<b>Methods of Activating Molecules</b>	<b>33</b>
5.1	Thermal Activation of Organic Molecules	33
5.1.1	High Temperature Reactions	33
5.1.2	Flash Vacuum Pyrolysis	35
5.1.3	Microwave Reactions	36
5.2	Photochemical Activation	38
5.3	Electrochemical Activation	39
5.4	Chemical Activation	41
5.5	Accumulation of Reactive Species	43
5.5.1	The Cation-pool Method	44
5.6	Continuous Generation of Reactive Species in a Flow System	57
5.7	Interconversion Between Reactive Species	59
5.8	Conclusions	62
	References	63
<b>6</b>	<b>Control of Extremely Fast Reactions</b>	<b>69</b>
6.1	Mixing	69
6.1.1	How Does Mixing Take Place?	70
6.1.2	Molecular Diffusion and Brownian Motion	72
6.1.3	Disguised Chemical Selectivity	73
6.1.4	Lowering the Reaction Temperature	76
6.1.5	The High Dilution Method	77
6.1.6	Micromixing	78
6.1.7	Friedel-Crafts Alkylation Using an <i>N</i> -acyliminium Ion Pool	78
6.1.8	Micromixing as a Powerful Tool for Flash Chemistry	85
6.1.9	Disguised Chemical Selectivity in Competitive Parallel Reactions	85
6.2	Temperature Control	87
6.2.1	Exothermicity of Fast Reactions	87
6.2.2	Hammond's Postulate	89
6.2.3	The Friedel-Crafts Reaction	90
6.2.4	Solvent	92
6.2.5	Heat Transfer	93
6.2.6	Precise Temperature Control in Microflow Systems	95

6.3	Residence Time Control	97
6.3.1	The Discovery of Benzyne. The Concept of Reactive Intermediates	98
6.3.2	<i>o</i> -Bromophenyllithium	99
6.4	Conclusions	102
	References	102
7	<b>Microfluidic Devices and Microflow Systems</b>	<b>105</b>
7.1	Brief History	105
7.1.1	Microflow Systems for Chemical Analysis	106
7.1.2	Microflow Systems for Chemical Synthesis	107
7.2	Characteristic Features of Microflow Systems	108
7.3	Microstructured Fluidic Devices	110
7.3.1	Microchip Reactors	110
7.3.2	Microtube Reactors	112
7.3.3	Micromixer	113
7.3.4	Passive Micromixers	114
7.3.5	Microheat Exchanger	125
7.3.6	Photochemical Microflow Reactor	126
7.3.7	Electrochemical Microflow Reactor	128
7.3.8	Catalyst-containing Microflow Reactor	129
7.3.9	Microflow Reactors for High-pressure and High-temperature Conditions	131
7.4	Conclusions	133
	References	133
8	<b>Applications of Flash Chemistry in Organic Synthesis</b>	<b>137</b>
8.1	Highly Exothermic Reactions that are Difficult to Control in Macrobatches Reactors	138
8.1.1	Fluorination	138
8.1.2	Chlorination and Bromination	139
8.1.3	Nitration	142
8.1.4	1,4-Addition Reactions of Amines	143
8.1.5	Halogen–magnesium Exchange Reactions	143
8.1.6	Oxidation of an Alkene with H <sub>2</sub> O <sub>2</sub> /HCO <sub>2</sub> H	145
8.2	Reactions in which a Reactive Intermediate Easily Decomposes in Macrobatches Reactors	147
8.2.1	Swern–Moffatt Oxidation	147
8.2.2	Organolithium Reactions	150
8.3	Reactions with Products which Easily Decompose in Macrobatches Reactors	153

8.3.1	Dehydration of an Allylic Alcohol to Give a Diene as an Unstable Product	153
8.4	Reactions in which Undesired By-products are Produced in the Subsequent Reactions in Macrobath Reactors	154
8.4.1	Friedel-Crafts Reactions	154
8.4.2	Iodination of Aromatic Compounds	157
8.4.3	Reaction of Phenylmagnesium Bromide with Boronic Acid Trimethyl Ester	158
8.4.4	[4 + 2] Cycloaddition Reaction of <i>N</i> -acyliminium Ion with Olefin	160
8.4.5	Biphasic Azo-coupling Reactions	162
8.5	Reactions that can be Accelerated Using Microflow Systems	163
8.5.1	Acceleration of Reactions at High Temperatures	163
8.5.2	Acceleration of Radical Reactions Using Quickly Decomposing Radical Initiators	165
8.5.3	Acceleration by Controlled Mass Transfer	166
8.5.4	Acceleration by Microwaves	167
8.5.5	Acceleration by High-pressure and High-temperature Conditions	167
8.6	Conclusions	169
	References	169
9	<b>Polymer Synthesis Based on Flash Chemistry</b>	<b>173</b>
9.1	Polymerization	173
9.2	Chain-growth Polymerization and Step-growth Polymerization	174
9.3	Molecular Weight and Molecular-weight Distribution	176
9.4	Cationic Polymerization	176
9.4.1	Conventional Cationic Polymerization	176
9.4.2	Living Cationic Polymerization	178
9.4.3	Ideal Living Cationic Polymerization	180
9.4.4	Fast Initiation and Mixing	181
9.4.5	Cation-pool Initiated Polymerization of Vinyl Ethers Using a Microflow System	182
9.4.6	Livingness of the Microflow System-controlled Cationic Polymerization	184
9.4.7	Comparison Between Conventional Living Cationic Polymerization and Microflow System-controlled Cationic Polymerization	185

9.4.8	Microflow System-controlled Cationic Polymerization Initiated by $\text{CF}_3\text{SO}_3\text{H}$	187
9.5	Free-radical Polymerization	189
9.5.1	Conventional Free-radical Polymerization	189
9.5.2	Living-radical Polymerization	190
9.5.3	Emulsion and Suspension Polymerization	191
9.5.4	Radical Polymerization in Microflow Systems	192
9.5.5	Simulation of Free-radical Polymerization in Microflow Systems	196
9.6	Conclusions	197
	References	197
<b>10</b>	<b>Industrial Applications of Flash Chemistry</b>	<b>199</b>
10.1	Synthesis of Diarylethene as a Photochromic Compound (Micrometer-size Single-channel Reactor)	201
10.2	Synthesis of a Pharmaceutically Interesting Spiro Lactone Fragment of Neuropeptide Y (Millimeter-size Single-channel Reactor)	206
10.3	Grignard Exchange Process (Internal Numbering-up)	208
10.4	Radical Polymerization Process (Numbering-up)	212
10.5	Other Examples of Industrial Applications of Flash Chemistry	218
10.6	Flash Chemistry as a Powerful Means of Sustainable Chemical Synthesis	219
10.7	Conclusions	220
	References	221
<b>11</b>	<b>Outlook for Flash Chemistry</b>	<b>223</b>
	<b>Index</b>	<b>225</b>
