

CONTENTS

<i>Chapter</i>	<i>Page</i>
Foreword	v
Preface	vii
Preface to Second Edition	ix
1. Introduction	1
2. The Determination of Absorption Spectra	16
3. The Origin of Spectra	35
4. Colour and Constitution	44
5. The Selective Absorption of Compounds Containing a Single Chromophoric Group	52
6. Compounds Containing More Than One Chromophore—General Discussion. Conjugation and Resonance	73
7. The Selective Absorption of Simple Conjugated Systems	93
8. <i>K</i> -Chromophores and <i>R</i> -Chromophores	126
9. Benzenoid Absorption	131
10. The Selective Absorption of Some Heterocyclic Compounds	150
11. Application of Absorption Spectra in the Detection and Identification of Some Organic Compounds	178
12. The Spectrophotometric Determination of Organic Compounds	195
13. Determination of the Composition of Mixtures by Absorption Spectrophotometry	213
14. Application of Absorption Spectra to Problems of Molecular Structure	224
15. Isomerism and Absorption Spectra	252
16. Some Miscellaneous Applications of Absorption Spectrophotometric Methods	283
Appendix 1. The Bibliography of Absorption Spectroscopy	293
Appendix 2. Solvents and Solvent Effects	298
Appendix 3. Temperature Effects	305
Author Index	307
Subject Index	313
Index of Compounds	319
