

CONTENTS

Chapter I. General Introduction	1
Chapter II. Raw Materials for Isocyanates	5
I. Introduction	5
II. Phosgene	5
A. Preparation	5
B. Analytical Techniques	7
1. Wet Methods	7
a. Liquid Phosgene	8
b. Gaseous Phosgene	15
2. Gas Chromatographic Methods	19
3. Spectroscopic Studies	21
4. Additional Methods and Techniques	26
a. Methods	26
b. Phosgene Detection and Measurement	28
III. Nitrotoluenes	37
A. Preparation	37
B. Analytical Techniques	40
1. Mononitrotoluenes	40
2. Dinitrotoluene	41
a. Wet Methods	41
b. Gas Chromatographic Methods	46
c. Spectroscopic Methods and Studies	49
d. Additional Methods and Techniques	59
IV. Tolylenediamine	61
A. Preparation	61
B. Analytical Techniques	64
1. Wet Method	64
2. Gas Chromatographic Methods	71
3. Spectroscopic Methods	71
4. Additional Methods and Techniques	72
References	74
Chapter III. Isocyanates	79
I. Introduction	79
II. Isocyanate Preparation	79

A. General	79
B. Preparation	79
1. Curtius, Hofmann, and Lossen Rearrangements	80
2. Double Decomposition Reactions	81
3. Preparation from Isocyanate Derivatives	81
4. Additional Preparations	82
5. Phosgenation Methods.	83
III. Analytical Methods	85
/A. General	85
/B. Wet Methods	86
C. Gas Chromatographic Methods	97
D. Spectroscopic Methods	99
1. Ultraviolet Region	99
2. Near-Infrared Region	99
3. Infrared Region.	99
/E. Miscellaneous Methods	111
/IV. Reactions of Isocyanates with Themselves	112
A. Dimers (Urethanediones).	112
B. Trimers (Isocyanurates)	131
C. Carbodiimides	146
References	157
Chapter IV. Isocyanate Derivatives	161
I. Introduction	161
II. Urethanes	161
A. Structural Relationships	161
B. Preparation	162
C. Catalysis and Kinetics	164
D. Reactions	167
/1. Dissociation to Isocyanate and Alcohol	168
2. Formation of Primary Amine and Olefin	169
3. Additional Reactions	169
E. Analytical Techniques and Characterization	170
1. Spectroscopic	170
2. Gas Chromatography	174
III. Allophanates	178
A. Preparation	178

B. Catalysis and Reactions	194
C. Analytical Techniques and Characterization	196
IV. Ureas	208
A. Structural Relationships	208
B. Preparation of Substituted Ureas	209
1. By the Reaction of Isocyanates	209
2. Preparation from Urea or Substituted Ureas	212
3. Miscellaneous Methods of Preparation	213
C. Reactions of Substituted Ureas	213
D. Catalysis and Kinetics	215
1. Amines	215
2. Water Reaction	217
E. Analytical Techniques and Characterization	218
V. Biurets	242
A. Structural Relationships	242
B. Preparation	242
C. Reactions and Catalysis	244
D. Analytical Techniques and Characterization	245
E. Summary	249
VI. Miscellaneous Reactions	259
A. Amides	259
B. Phenols	259
C. Carboxylic Acids	260
D. Miscellaneous Hydroxy Compounds.	260
E. Reactions with Compounds Containing C-H Group	261
F. Reactions of Carbodiimides	261
G. Summary	262
References	263
Chapter V. Polyols	269
I. Introduction	269
II. Polyethers	269
A. General Reactions	269
1. Acid-Catalyzed Hydration	269
2. Based-Catalyzed Hydration	270
B. Polymerization of Ethylene and Propylene Oxides	271

1. Mechanisms	272
C. Other Polymers	274
D. Reactions	275
III. Polyesters	276
A. Preparation	276
B. Reactions	277
IV. Analytical Techniques and Characterization	278
A. General (Polyethers and Polyesters)	278
B. Wet Methods	278
1. Hydroxyl Number	278
2. Determination of Primary and Secondary Hydroxyl Groups	285
3. General Analytical Methods (Wet)	288
V. Spectroscopic Techniques	303
A. General	303
B. Hydroxyl Number Determination	303
C. Miscellaneous Techniques	308
References	309
Chapter VI. Polyurethanes	313
I. Introduction	313
II. Cellular Polyurethanes	313
A. Preparation	313
1. Effect and Use of Polyol Analytical Data	315
2. Effect and Use of Isocyanate Analytical Data	315
a. Isocyanate Isomer Ratio	315
b. Effects of Isocyanate and Isocyanate Impurities	315
B. Catalyses	317
C. Formulation and Useful Terms	318
1. Number Average Molecular Weight	318
2. Weight Average Molecular Weight	320
III. Analytical Techniques and Characterization	323
A. General	323
B. Identification	325
C. Analysis and Characterization	335
1. Infrared	335

2. Wet Methods	343
3. Thermal Analysis	344
IV. Noncellular Polyurethanes	350
A. Preparation (General)	350
1. Prepolymer Formation	351
2. Chain Extension	351
3. Curing or Crosslinking	352
B. Cast Elastomers	353
1. Prepolymer Formation	353
2. Curing or Prepolymers	353
3. One-Shot Preparation	353
4. Thermoplastic Polymers	353
C. Coatings	354
1. One-Component Coatings	354
a. Isocyanate-Terminated Prepolymers	355
2. Two-Component Systems	356
D. Adhesives	357
E. Fibers	357
F. Analysis and Characterization	357
1. Wet Methods	357
2. Gas Chromatographic Methods	360
3. Infrared Techniques	364
4. Thermal Methods	365
5. Nuclear Magnetic Resonance	368
6. X-Ray Diffraction	368
References	369
 Chapter VII. Physical Properties of Isocyanates.	 375
Table of Properties	378
Extended Property Tables	549
References	582
 Chapter VIII. Isocyanate Toxicity and Analytical Methods for Measurement of Hazardous Concentrations of Isocyanates in Air	 597
I. Introduction	597
II. Toxicity of Isocyanates	597
A. Tolylenediisocyanate (TDI)	597

B. Methylene Diphenyl Diisocyanate (MDI)	600
III. Analytical Methods	601
A. General Discussion	601
B. Detailed Procedures	604
References	613
Author Index	617
Subject Index	625
