Preface to the first German edition	vii
Introduction	1

## CHAPTER 1

### The production and manufacture of the paraffinic hydrocarbons

I. Introduction	7
II. The production of the lower paraffins	12
A. The production of the lower paraffinic hydrocarbons from natural gases	13
(a) The separation of natural gasoline and LPG from wet natural gases by absorption in washing oils	23
(b) The compression process	31
(c) Separation of natural gasoline by deep refrigeration	31
(d) The adsorption process	32
B. The gaseous paraffins from the hydrogenation of lignite (brown coal)	33
(a) The occurrence of the gaseous paraffin hydrocarbons in the various phases of lignite hydrogenation	34
(b) The slurry-phase process	36
1. The sludge and the processing of the residue	39
2. The coal stripper distillation	40
(c) The gas-phase hydrogenation process	41
1. The pre-hydrogenation	41
2. The benzinization stage	43
(d) The working up of the total gas mixture	44
III. Paraffin wax	47
A. Petroleum paraffin wax	47
(a) The use of propane as a dewaxing solvent	48
(b) The Bari-Sol process	49
(c) Dewaxing by means of mixtures of ketones	49
(d) The EDELEANU process	50
(e) The purification of the paraffin wax	50
B. Paraffin wax from lignite low-temperature carbonization tar and L. T. H. [low temperature hydrogenation] paraffin wax	53
C. The composition and properties of the various paraffin waxes	55
IV. Recovery of normal paraffinic hydrocarbons by extractive crystallization from petroleum fractions by means of urea	59

V. Separation of normal paraffins from technical mixtures of hydrocarbons by means of molecular sieves	67
VI. Preparation of pure individual paraffins	69
A. Straight-chain paraffins	70
(a) Preparation of paraffins from aliphatic compounds with retention of the number of carbon atoms in the carbon chain	70
1. From alcohols by replacing the hydroxyl group with hydrogen	70
2. From aliphatic ketones by the reduction of the keto group to the methylene group	72
(b) Preparation of paraffinic hydrocarbons from aliphatic compounds with an increase in the number of carbon atoms	72
1. From fatty acids	72
2. From primary alcohols	72
3. The WURTZ synthesis	73
4. By the electrolysis of fatty acids	73
B. Branched paraffins	74
References	74

## CHAPTER 2

The catalytic hydrogenation of carbon monoxide over cobalt and iron catalysts  
(FISCHER-TROPSCH synthesis)

I. Introduction	89
II. The hydrocarbon synthesis of FRANZ FISCHER and HANS TROPSCH using cobalt catalysts	93
A. General	93
(a) Difference between the FISCHER-TROPSCH hydrocarbon synthesis and the BERGIUS-I. G. FARBENINDUSTRIE A.G. coal hydrogenation process	94
(b) The potential use of the products of the FISCHER-TROPSCH hydrocarbon synthesis as raw material for an aliphatic chemical industry	94
(c) History of the catalytic hydrogenation of carbon monoxide	95
B. The operation of the "Kogasin synthesis" on a technical scale	99
(a) The production of water-gas	100
1. From coke	100
2. From lignite	101
3. The LURGI pressure gas process	102
4. From hydrocarbons	102
(i) The thermal or catalytic reforming of methane into carbon monoxide-hydrogen mixtures	103
(ii) The preparation of carbon monoxide-hydrogen mixtures by the partial combustion of natural gas	103
(iii) The combination of the water-gas process with methane splitting	104
(b) The preparation of the additional hydrogen	104
1. Water-gas conversion	104
2. The separation of coke-oven gas by LINDE distillation	105
3. The quantities of gas (carbon monoxide: hydrogen = 1:2) required for the synthesis	105
4. Comparison of the requirements of carbon monoxide: hydrogen mixtures for the preparation of equal amounts of end-product by the FISCHER-TROPSCH synthesis, the methanol synthesis, and the high-pressure gasoline synthesis	105

(c) Purification of the gases	106
1. Coarse purification	106
2. Fine purification	107
(d) The synthesis	108
1. The influence of the composition of the gas on the olefin content of the synthesis product	108
2. The influence of the temperature on the composition of the synthesis product	109
3. The catalyst	109
(i) The preparation of the catalyst	110
(ii) The working up of exhausted catalysts	111
4. The chemistry of the FISCHER-TROPSCH hydrocarbon synthesis	112
C. The normal-pressure synthesis process	117
(a) The removal of heat during the synthesis	118
(b) Starting up the reactors	120
(c) The multi-stage process	120
(d) Catalyst loading and productivity	121
(e) Catalyst regeneration	123
(f) Separation of the reaction products	123
1. The condensation of the higher-boiling components	123
2. The importance of the components boiling below 150 °C for the economy of the process and their composition	124
3. The advantages of activated carbon adsorption over oil scrubbing in the normal-pressure synthesis	125
4. The adsorption process	126
5. The recovery of the LPG by selective desorption from the Super-sorbon carbon	127
6. The switching scheme of a large-scale industrial activated carbon plant	128
(g) The products of the FISCHER-TROPSCH synthesis	131
1. The percentage composition of the products of the normal-pressure synthesis	131
2. The factors influencing the composition of the product	135
3. The olefin content of the synthesis products	136
4. Working up of the synthesis products	138
D. The medium-pressure synthesis	138
E. The olefin synthesis	144
III. Hydrocarbon synthesis using iron catalysts	146
A. General	146
B. The MICHAEL process	190
C. The DUFTSCHMID process	151
D. The KÖLBEL-RHEINPREUSSEN process	153
E. The fluidized-bed process	161
(a) The oxygen-containing compounds from the Hydrocol process	164
F. The isosynthesis	166
G. The FISCHER-TROPSCH synthesis with fixed iron catalyst (the process of the RUHRCHEMIE-LURGI consortium)	168
H. The high- and very-high-molecular-weight paraffinic hydrocarbons from the FISCHER-TROPSCH synthesis	173
(a) The yield of paraffin wax in the normal- and medium-pressure synthesis with cobalt catalysts	173
(b) The catalyst paraffin wax	175
(c) The KRUPP-Kohlechemie hard paraffin wax synthesis	175
(d) The use of ruthenium catalysts (synthesis of FISCHER and PICHLER)	177

## CONTENTS

1. General	
2. Influence of pressure and temperature	
3. The preparation of the catalyst	
4. The interpretation of the reaction mechanism	
5. The production of extremely high-molecular-weight paraffin wax by step-wise extraction with various solvents	181
References	181

## CHAPTER 3

### The chlorination and chlorination products of the paraffins

I. Introduction	190
II. Photochemical chlorination	192
A. Theoretical considerations on photochemical reactions	192
B. The practice of photochemical chlorination	196
III. Catalytic chlorination	204
A. Homogeneous catalysis	204
(a) Chlorination of ethane with tetraethyl-lead as catalyst	209
(b) Chlorination of n-pentane in the liquid phase with tetraethyl-lead as catalyst	209
(c) Chlorination of n-pentane with hexaphenylethane as catalyst	209
B. Heterogeneous catalysis	210
(a) Chlorination in the presence of oxygen	211
(b) Chlorination in a salt bath	212
IV. Thermal chlorination	213
A. General. The course of the reaction in the thermal chlorination of ethane	213
B. Laboratory experiments on thermal chlorination	217
C. The HASS-McBEE thermal chlorination process	219
D. The thermal chlorination of methane by the HASS-McBEE process	224
E. The thermal chlorination of the gaseous paraffins in the presence of suspended materials. Basic features of the process	231
(a) Chlorination of butane	232
(b) Preparation of methyl chloride	233
(c) Technical manufacture of ethyl chloride by chlorination of ethane using the "suspended catalyst"	233
1. Chlorination	234
2. Purification and drying of the reaction products	235
3. The separation of the products by distillation under pressure	236
F. The thermal chlorination of propane	237
G. The thermal chlorination of pentane	240
(a) The starting material	240
(b) The chlorination of technical pentane	241
1. The monochloropentanes	241
2. The dichloropentanes	242
3. The technical process of pentane chlorination	243
H. The thermal chlorination of the higher paraffinic hydrocarbons	245
(a) The chlorination of paraffin wax	246

V. Special chlorination processes	246
A. Chlorination with chlorine donors	246
(a) Antimony pentachloride, phosphorus pentachloride, ferric chloride	246
(b) Sulphuryl chloride	247
(c) Chlorination with t-butyl hypochlorite	248
(d) Chlorination with trichloromethanesulphonyl chloride	249
(e) Chlorination with trichloromethanesulphenyl chloride	250
(f) Chlorination with chlorine water	250
VI. Perchlorination, high-pressure chlorination, and chlorolysis	250
A. The working-up of the reaction products	255
VII. Preparation of alkyl chlorides other than by the direct chlorination of paraffinic hydrocarbons	258
A. Replacement of the hydroxyl group in alcohols by chlorine	258
B. The addition of hydrogen chloride or alkyl chlorides to olefins	262
VIII. Reactions for building up highly chlorinated paraffinic hydrocarbons	264
IX. The prevention of the formation of di- and polychlorides	265
X. The formation of isomers in the monochlorination of paraffinic hydrocarbons	265
XI. The bromoparaffins	268
XII. The iodoparaffins	269
XIII. The fluoroparaffins	270
XIV. The chemical utilization of the chlorination products of the paraffinic hydrocarbons	276
A. General	276
B. The utilization of the chlorination products of the lower hydrocarbons	278
(a) Chlorination products of methane	278
(b) Chlorination products of ethane — tetraethyl-lead	289
(c) Chlorination products of propane — cyclopropane	294
(d) Chlorination products of butane	296
(e) The saponification of amyl chlorides to amyl alcohols	298
1. Hydrolysis	298
2. Double decomposition	299
3. The formation of amylenes	300
4. The technical saponification of the amyl chlorides and the working up of the amyl alcohols	301
5. The esterification of the amyl alcohols	304
6. The utilization of the by-products from the chlorination of pentane and the manufacture of Pentasols	305
(f) Other technical reactions with amyl chlorides	306
1. p-t-Amylphenol	306
2. Preparation of the amylnaphthalenes	308
3. The amyamines	309
4. Amyl mercaptan	310
(g) Various reactions of the alkyl chlorides	311
XV. The utilization of the chlorination products of the higher paraffinic hydrocarbons	313
A. General	313
B. Preparation of synthetic lubricating oils from chloroparaffins	317
(a) General methods	317

## CONTENTS

(b) Preparation of synthetic lubricating oils by condensing alkyl chlorides with aromatic hydrocarbons	317
(c) Preparation of synthetic lubricating oils by the self-condensation of higher alkyl chlorides with anhydrous aluminium chloride	323
C. The condensation of alkyl chlorides with naphthalene to give pour-point depressants (Paraflow)	325
D. The further processing of higher alkyl chlorides to give detergents and textile auxiliaries	328
(a) General	328
(b) The condensation of higher alkyl chlorides with phenol	329
(c) The condensation of higher alkyl chlorides with benzene by the FRIEDEL-CRAFTS process	329
(d) Further possible conversions of chlorination products of the higher paraffinic hydrocarbons	332
(e) The direct use of the chlorination products of higher paraffinic hydrocarbons (Kogasin II and paraffin wax)	333
(f) Chlorinated paraffin wax	335
References	341

## CHAPTER 4

### The nitration and nitration products of the paraffins

I. Introduction	365
II. The reactions of the nitroparaffins	367
A. Action of alkali on the nitroparaffins	367
B. The reaction of the nitroparaffins with nitrous acid	370
(a) Scheme for the separation of primary, secondary, and tertiary nitroparaffins	371
C. The halogenation of the nitroparaffins	371
(a) In the presence of bases	371
(b) In the absence of bases	372
D. The sulphochlorination of the nitroparaffins	373
E. Condensation of the nitroparaffins with compounds containing carbonyl groups (aldehydes and ketones)	373
F. The oxidation of the nitroparaffins	376
G. The reduction of the nitroparaffins	376
(a) Reduction to amines	376
(b) Reduction to alkyhydroxylamines	377
H. The action of mineral acids on the nitroparaffins	377
(a) Action of acids on the neutral form of the primary nitroparaffins	377
(b) Action of dilute mineral acids on the nitronic acids (NEF's reaction)	379
I. Action of diazonium salts on the aci-form of the nitroparaffins	379
K. Addition of nitroparaffins to activated double bonds	380
III. The direct nitration of normally gaseous paraffinic hydrocarbons	380
A. General; starting material	380
B. HASS's gas-phase nitration process	381
(a) The influence of the temperature in gas-phase nitration	383
(b) The influence of an excess of hydrocarbons on the yield of nitroparaffin	385
(c) The causes of the degradation of the carbon chain in gas-phase nitration	386

C.	Special data on the nitration of the lower members of the paraffinic hydrocarbons	390
(a)	The nitration of propane, n-butane, and isobutane	390
(b)	The nitration of methane	391
(c)	The nitration of ethane	392
(d)	The nitration of n-pentane	395
(e)	The nitration of isopentane	396
(f)	Comparative review of the composition of the reaction products formed in the nitration of the gaseous paraffins	397
(g)	The nitration of di-isopropyl (2,3-dimethylbutane)	398
(h)	The nitration of neopentane and neohexane	399
D.	Gas-phase nitration with nitrogen dioxide	400
E.	The gas-phase nitration of higher paraffinic hydrocarbons with nitric acid vapour	402
F.	Industrial gas-phase nitration	403
G.	Nitration in the presence of oxygen and halogens	405
H.	HASS'S nitration rules	407
IV.	The nitration of the higher paraffinic hydrocarbons in the liquid phase	409
A.	Nitration in a heterogeneous system	409
(a)	At atmospheric pressure by boiling with concentrated nitric acid in an open vessel (BEILSTEIN and KURBATOW, WORSTALL)	409
(b)	Under pressure with nitric acid (KONOVALOV, MARKOVNIKOV)	411
B.	Nitration in a homogeneous system	413
(a)	At atmospheric pressure (GRUNDMANN)	413
(b)	Under pressure with dinitrogen tetroxide	418
C.	The starting material for the nitration of higher paraffinic hydrocarbons	421
D.	The working up of the nitration products of the higher paraffinic hydrocarbons	421
E.	Properties and composition of the nitration products of the higher paraffins	423
V.	Preparation of the mononitroparaffins by methods other than the direct nitration of hydrocarbons	424
A.	VICTOR MEYER'S reaction	424
B.	The synthesis due to KORNBLUM <i>et al.</i>	426
C.	KOLBE'S synthesis	427
D.	BEWAD'S synthesis	428
E.	Further preparative possibilities	428
F.	Preparation of nitroparaffins with the nitro group in a definite position from oximes	429
G.	The physical and pharmacological properties of the lower-molecular-weight nitroparaffins	430
VI.	The utilization of the nitration products of the lower gaseous paraffinic hydrocarbons	434
A.	General	434
B.	The use of the lower nitroparaffins as solvents	435
C.	The reaction with aldehydes in an alkaline medium to give nitroalcohols	440
(a)	Purification of the nitroalcohols	443
(b)	The esterification of the nitroalcohols with organic acids	444
(c)	The esterification of the nitroalcohols with inorganic acids	446
D.	Further reactions of the aliphatic nitroalcohols of various types	450
(a)	Combined action of formaldehyde and amines on nitroparaffins still possessing a mobile hydrogen atom (MANNICH reaction)	450

(b) Esterification of nitroalcohols with aromatic and aliphatic sulphonic acids	451
(c) Reactions of nitroglycols with aldehydes	452
(d) Conversion of the nitroalcohols into nitroalkyl chlorides	452
(e) The reduction of the nitroalcohols to aminoalcohols	452
E. The production of carboxylic acids by the action of mineral acids on the primary nitroparaffins	454
F. Production of aldehydes and ketones by the action of mineral acids on the aci-form of the nitroparaffins (NEF reaction)	455
G. Various reactions of the lower nitroparaffins	455
VII. The further processing of the nitration products of the higher paraffinic hydrocarbons	460
A. General	460
B. Transformations of the nitro group	464
(a) Catalytic reduction	464
(b) Reduction in an acid medium	465
(c) Reduction in an alkaline medium	465
(d) Preparation of ketones from higher nitro compounds	466
C. Reactions of the hydrogen atom in the $\alpha$ -position to the nitro group	466
(a) Chlorination of the higher nitroparaffins	466
(b) The higher aliphatic nitroalcohols	467
VIII. The dinitroparaffins	467
A. Preparation by direct nitration	467
B. Preparation of the dinitroparaffins other than by the direct nitration of paraffins	468
(a) Preparation of geminal dinitroparaffins	468
(b) Preparation of vicinal dinitroparaffins	469
(c) Preparation of $\alpha, \omega$ -dinitroparaffins	470
References	470

## CHAPTER 5

## The sulphochlorination and the sulphochlorination products of the paraffins

I. Introduction	483
A. The history of the sulphochlorination reaction	484
B. The actual constitution of the sulphochlorination products	486
II. The side-reactions in sulphochlorination	488
A. Chain chlorination	488
B. The formation of di- and polysulphonyl chlorides	488
III. The suppression of the side-reactions in sulphochlorination	488
A. The substantial avoidance of chain chlorination by the use of ultraviolet light in the sulphochlorination reaction	488
B. The influence of the temperature on the sulphochlorination reaction	490
C. The effect of the ratio of sulphur dioxide to chlorine in the gas on the chain chlorination	490

CONTENTS

D. The probable causes of the residual chain chlorination	492
E. The substantial avoidance of the formation of di- and polysulphonyl chlorides	492
IV. The reaction mechanism of sulphochlorination	493
V. Catalysts for sulphochlorination	495
A. Radical-forming substances	496
B. Organic peroxides	497
C. Olefins as catalysts for the sulphochlorination reaction	499
D. Inhibitors of the sulphochlorination reaction	499
VI. The sulphochlorination of paraffinic hydrocarbons with sulphuryl chloride	499
VII. The behaviour of the individual types of hydrocarbons in sulphochlorination	501
A. The normal paraffins	501
B. The cycloparaffins	501
C. Aromatic compounds	501
D. Other organic compounds	502
E. Petroleum	502
F. Kogasin from the FISCHER-TROPSCH synthesis	503
VIII. The analytical determination of the products which arise in sulphochlorination	503
A. Determination of the chain chlorine	503
B. The hydrolysable chlorine	504
C. Determination of the neutral oil	505
D. Determination of the amounts of mono-, di-, and polysulphonyl chlorides	505
(a) The precipitation of the polysulphonyl chlorides by means of pentane	506
(b) The separation of the monosulphonyl chlorides from the polysulphonyl chlorides by fractional distillation of the sulphonyl fluorides	507
E. The chlorinated mono- and polysulphonyl chlorides	509
IX. The formation of isomers in the sulphochlorination of the paraffinic hydrocarbons	509
X. Preparation of the aliphatic sulphonyl chlorides by methods other than sulphochlorination	510
A. The thiourea process of SPRAGUE and JOHNSON	511
B. The thiocyanate process of JOHNSON and DOUGLASS	511
C. The reaction of mercaptans, sulphides, and di- and polysulphides with chlorine water	512
D. The reaction of paraffin sulphonates with phosphorus pentachloride	513
E. The preparation of definide paraffin sulphonyl chlorides by means of the GRIGNARD reaction	513
XI. Sulphonyl bromides and sulphonyl fluorides	513
XII. The reactions of the aliphatic sulphonyl chlorides	514
A. The saponification of the sulphonyl chlorides with alkali hydroxides	514
B. The reaction of the sulphonyl chlorides with ammonia, amines, and their derivatives	514
C. The reaction of the aliphatic sulphonyl chlorides with phenols and their derivatives	515
D. The reaction of paraffin sulphonyl chlorides with alcohols and thioalcohols	515
E. The desulphurization of the aliphatic sulphonyl chlorides	516
F. The reduction of the sulphonyl chlorides to sulphinic acids	519

## CONTENTS

<b>XIII. The technical process of sulphochlorination</b>	<b>520</b>
A. The sulphochlorination of normally gaseous paraffinic hydrocarbons	520
(a) The apparatus for the sulphochlorination of gaseous paraffins in an inert solvent	521
(b) Working up the reaction products	523
(c) The reaction temperature	524
(d) The influence of the relative amounts of the reactants on the composition of the end-product	525
(e) The reactivity of the individual gaseous paraffinic hydrocarbons	526
(f) The technical sulphochlorination process for gaseous paraffins	526
B. The sulphochlorination of the liquid paraffinic hydrocarbons	528
(a) The starting material	528
(b) The sulphochlorination reaction of liquid hydrocarbons on a laboratory scale	530
(c) The technical sulphochlorination of liquid paraffins	532
1. Saturation of the Kogasin by hydrogenation	532
2. The sulphochlorination of hydrogenated Kogasin	533
<b>XIV. The further processing of the sulphonyl chlorides of the higher paraffins</b>	<b>537</b>
A. General	537
B. The separation of the sulphonyl chlorides from neutral oil by extraction with selective solvents	538
(a) Extraction using liquid sulphur dioxide	538
(b) Extraction with acetonitrile	541
C. The further processing of the sulphonyl chlorides of the higher paraffins in the presence of neutral oil	541
(a) The conversion of the higher paraffin sulphonyl chlorides into sulphonates for detergents and textile auxiliaries by means of alkali hydroxides	541
1. General remarks on detergents and wetting and foaming agents	541
2. Dependence of the surface activity of the alkanesulphonates obtainable by sulphochlorination on the carbon number of the Hydrocarbon upon which they are based	543
3. Dependence of the surface activity of a sulphonate on the position of the sulpho group in the molecule	545
4. The influence of the degree of sulphochlorination on the surface-active properties of the sulphonates obtained from the sulphonyl chlorides by alkaline saponification	547
5. The solubility and hygroscopic properties of the alkanesulphonates	548
(b) The technical manufacture of the sulphonates	549
(c) The reaction of the paraffin sulphonyl chlorides with phenols and alcohols	552
(d) Reaction of the higher sulphonyl chlorides with ammonia and its derivatives	553
(e) The further treatment of the higher alkanesulphonamides	557
1. Reaction with ethylene oxide	557
2. Reaction with chlorinated aliphatic acids	558
3. Reaction with ethylene chlorohydrin and glycerol chlorohydrin	558
4. Reaction with formaldehyde and hydrogen chloride	559

5. Reaction with formaldehyde and compounds containing amino groups	563
6. Reaction with formaldehyde and bisulphite	
(f) Reaction of the sulphonyl chlorides with compounds containing amino or hydroxy groups and other hydrophilic substituents	
D. Hypalon S <sub>2</sub>	
3. Prospects for the further treatment of the higher paraffin sulphonyl chlorides	563
References	564

## CHAPTER 6

### The oxidation and oxidation products of the paraffins

I. Introduction	572
II. The oxidation of the normally gaseous paraffinic hydrocarbons	572
III. The incomplete oxidation of methane with oxygen for the preparation of synthesis gas (carbon monoxide-hydrogen mixtures)	583
IV. The catalytic oxidation of gaseous paraffinic hydrocarbons in a homogeneous system	583
V. The oxidation of propane and ethane for the preparation of hydrogen peroxide	587
VI. Oxidation processes for producing heat	587
VII. The oxidation of the higher paraffinic hydrocarbons	588
A. History of the oxidation of paraffin wax	589
B. The starting material for the oxidation of paraffin wax	590
C. True paraffin wax oxidation	595
(a) The oxidation	595
1. General	595
2. The influence of the reaction conditions	596
(i) The temperature	596
(ii) The catalyst	597
(iii) The influence of pressure	598
(iv) The influence of the dispersion of air on the rate of oxidation when working at low temperatures	599
3. The technical paraffin wax oxidation process	600
(b) The working up of the oxidation products	604
1. The preliminary purification of the crude oxidate	604
2. The saponification of the oxidation product	605
3. The separation of the unsaponifiable matter	606
Method 1	
(i) The unsaponifiable matter I	606
(ii) The unsaponifiable matter II	606
Method 2	
(i) The unsaponifiable matter I	608
(ii) The unsaponifiable matter II	608
4. The splitting of the crude soap	609
5. The distillation of the fatty acids	615

VIII. The chemistry of the oxidation reaction	614
IX. The utilization of the by-products of the oxidation of paraffin wax	619
A. The aqueous condensate ("condensate liquor")	619
B. The oily condensate ("condensate oil")	620
C. The fore-run fatty acids	621
D. Synthetic fat	624
X. The oxidation of higher paraffinic hydrocarbons for other purposes than the manufacture of soap fatty acids	626
A. The oxidation of hard paraffin wax with nitrous gases in the presence of nitrosylsulphuric acid	626
B. The preparation of alcohols by the oxidation of higher paraffinic hydrocarbons	627
C. The oxidation of higher paraffinic hydrocarbons in the gas phase	632
D. Dicarboxylic acids by the oxidation of paraffinic hydrocarbons	632
References	633

## CHAPTER 7

The sulphoxidation and other substitution reactions  
of the paraffinic hydrocarbons

I. Introduction	645
II. The starting material	646
A. The mechanism of the sulphoxidation reaction	647
III. Sulphoxidation in the presence of ultraviolet light	650
A. Work on the laboratory scale	650
(a) The sulphoxidation of cyclohexane	650
(b) The sulphoxidation of n-heptane	651
(c) Sulphoxidation of the normally gaseous paraffinic hydrocarbons under the influence of ultraviolet light	651
(d) The sulphoxidation of the higher liquid paraffinic hydrocarbons in the presence of ultraviolet light	653
B. Discontinuous process	653
C. Continuous process	654
D. The recovery of the free alkanesulphonic acids	656
IV. Technical sulphoxidation by the light-water process	656
A. Reaction vessel	657
B. The immersion tubes	658
C. The sources of energy	658
D. The introduction of the gases into the hydrocarbon mixture	659
V. Sulphoxidation in the presence of peroxide compounds	660
A. The sulphoxidation of paraffinic hydrocarbons in the presence of organic per-acids	660
B. The sulphoxidation of paraffinic hydrocarbons in the presence of acyl alkanesulphonyl peroxides	661
(a) Preparation of acetyl cyclohexanesulphonyl peroxide	661
VI. Sulphoxidation in the presence of substances with an acylating action	662
A. Laboratory experiments	664
B. The technical process of sulphoxidation in the presence of acetic anhydride (the acetic anhydride process)	664

VII. Sulphoxidation in the presence of ozone	667
VIII. The formation of isomers during sulphoxidation	668
IX. Sulphoxidation in the presence of chlorine	668
X. Further methods for the preparation of alkanesulphonates	669
XI. Other substitution reactions of the paraffinic hydrocarbons	671
A. Chlorophosphonation	671
B. Carbochlorination	674
C. Cyanation	676
D. The nitroschlorination and nitrosation of the paraffinic hydrocarbons	676
E. The reaction of paraffinic hydrocarbons with carbon monoxide in the presence of anhydrous aluminium chloride	678
F. Reaction of the paraffinic hydrocarbons with acid chlorides in the presence of anhydrous aluminium chloride	678
G. The photochemical formation of sulphinic acids from sulphur dioxide and paraffinic hydrocarbons	678
XII. Various chemical reactions of the paraffinic hydrocarbons other than substitution processes	679
A. The action of sulphur on paraffinic hydrocarbons	679
B. The preparation of thiophen from paraffinic hydrocarbons and sulphur	679
C. The preparation of carbon disulphide from paraffinic hydrocarbons and sulphur	681
D. The catalytic reaction of methane with ammonia and air at high temperatures to form hydrocyanic acid (ANDRUSOFF process)	682
E. Preparation of nitriles from gaseous paraffinic hydrocarbons and ammonia in the presence of catalysts	685
F. The preparation of carbon black from gaseous paraffinic hydrocarbons	685
(a) Channel process	685
(b) The furnace process (incomplete combustion)	685
(c) The furnace process (thermal decomposition into the elements)	686
G. The action of various radiations on paraffinic hydrocarbons	687
References	687

## CHAPTER 8

## The isomerization of the paraffinic hydrocarbons

I. Introduction	693
II. General remarks on the isomerization of paraffinic hydrocarbons using anhydrous aluminium chloride as catalyst	695
III. The isomerization of n-butane to isobutane	700
A. The catalyst	700
B. Hydrogen chloride as promoter of the isomerization reaction	700
C. The influence of olefins on the isomerization reaction	701
D. The influence of temperature on the isomerization reaction	702
IV. The isomerization of the higher paraffinic hydrocarbons using anhydrous aluminium chloride as catalyst	702

V. The industrial isomerization of paraffinic hydrocarbons using anhydrous aluminium chloride as catalyst	707
A. The isomerization of butane	707
B. The isomerization of pentane and hexane	711
C. The catalytic isomerization of paraffinic hydrocarbons without using aluminium chloride	715
D. The processes for the catalytic isomerization of paraffinic hydrocarbons without aluminium chloride	719
E. The isomerization of higher paraffinic hydrocarbons	727
F. The separation of the normal paraffins from a mixture with isoparaffins by means of molecular sieves	728
References	729

## CHAPTER 9

## The substitution behaviour of paraffinic hydrocarbons

I. Introduction	733
A. The importance of the various substitution reactions of paraffinic hydrocarbons	733
B. The oldest substitution reaction, chlorination	733
C. DUMAS' substitution theory	734
D. Why were the substitution reactions of paraffinic hydrocarbons not developed until so recently?	734
E. Conceivable possibilities for the practical application of chlorination	735
F. Why can chlorination not assume the prominent position in aliphatic chemical technology which was previously considered possible?	735
G. The causes of the unsatisfactory reaction behaviour of the chlorination products and their connection with their composition	737
II. The composition of the chlorination products of the paraffinic hydrocarbons	737
A. The older investigations (review)	737
B. The work of SCHORLEMMER and his co-workers	738
C. The work of MICHAEL and his co-workers	742
D. Literature data on the quantitative ratios in substitution by chlorination	745
III. New accurate investigations on the substitution behaviour in chlorination	747
A. The formation of isomers in the monochlorination of normally gaseous paraffins, including the pentanes	748
B. The rules governing the formation of isomeric halogenohydrocarbons by the direct chlorination of gaseous hydrocarbons	752
C. Example of the calculation of the yield of the isomeric monochlorides from the relative reaction velocities of primary, secondary, and tertiary hydrogen atoms	765
D. The formation of isomers in the chlorination of normally liquid paraffinic hydrocarbons	766
(a) Method of investigation	766
(b) Quantitative elimination of hydrogen halide from alkyl chlorides without displacement of the double bond	767
(c) The characteristic laws in the elimination of hydrogen halide from higher alkyl halides	767
(d) Procedure for the quantitative determination of the composition of mixtures of higher isomeric olefins	769
(e) The experimental determination of the substitution ratios in the chlorination of the higher paraffins	770
(f) Result of the investigation	771

IV. The substitution behaviour in the nitration of paraffinic hydrocarbons	783
A. Literature data	783
B. Recent investigations	786
(a) The composition of the nitration products of the higher paraffinic hydrocarbons	786
(b) The formation of isomers in the direct nitration of the gaseous paraffins, including the pentanes	795
(c) Varying the composition of the product in the gas-phase nitration of the paraffinic hydrocarbons	798
C. Summary	801
V. Action of nitrosyl chloride on heptane and hexane	802
VI. Action of sulphur dioxide on paraffinic hydrocarbons in ultraviolet light	802
VII. Action of cyanogen chloride on paraffinic hydrocarbons in the presence of peroxides	803
VIII. Action of phosphorus trichloride and oxygen on paraffinic hydrocarbons	803
IX. Combined action of nitrogen monoxide and chlorine on paraffinic hydrocarbons in ultraviolet light	
X. The substitution behaviour in the sulphochlorination of paraffinic hydrocarbons	803
A. The composition of the sulphochlorination products of normally gaseous paraffinic hydrocarbons	803
(a) The monosulphonyl chlorides	803
B. The composition of the sulphochlorination products of the higher paraffinic hydrocarbons	805
C. Summary	808
XI. The substitution behaviour in the sulphoxidation of the paraffinic hydrocarbons	808
A. The composition of the sulphoxidation products of the higher paraffinic hydrocarbons	808
B. The formation of isomers from the normally gaseous paraffinic hydrocarbons	813
XII. The substitution behaviour in the chlorophosponation of the paraffinic hydrocarbons	813
XIII. The formation of the individual fatty acids in the oxidation of paraffins	814
XIV. The conditions for the disubstitution of paraffinic hydrocarbons	828
A. The disubstitution behaviour in the chlorination of the paraffinic hydrocarbons	829
B. The situation in the disulphochlorination of paraffinic hydrocarbons	844
C. The situation in the sulphochlorination of chlorinated hydrocarbons and sulphonyl chlorides	847
D. The situation in the dinitration of paraffinic hydrocarbons	850
