

# METABOLISM OF PLANT TERPENOIDS † ‡

GEORGE R. WALLER

*Department of Biochemistry, Agricultural Experimental Station,  
Oklahoma State University, Stillwater. Oklahoma 74074, U.S.A.*

## CONTENTS

INTRODUCTION	153
II. BIOSYNTHESIS	155
A. Generation of the biological isoprene unit	155
1. Formation of mevalonic acid (XI)	156
2. Synthesis of isopentenylpyrophosphate	157
B. Isomerization and polymerization of the biological isoprene unit	158
C. Monoterpenoids	161
1. Open-chain compounds	161
2. Monocyclic monoterpenes	166
3. Bicyclic monoterpenes	169
4. Tricyclic monoterpenes	178
D. Sesquiterpenoids	179
E. Diterpenoids	181
F. Triterpenoids and steroids	186
G. Tetraterpenes: carotenoids	194
H. Polyterpenoid alcohols	199
I. Polyisoprenoid quinones	201
J. Rubber	203
III. METABOLIC RELATIONSHIP BETWEEN TERPENES AND ALKALOIDS	206
IV. REGULATION OF TERPENOID METABOLISM	210

† This review pertains only to the metabolism of *plant-produced terpenoids*, since the rapid advances in the whole field of terpenoid metabolism are too extensive for detailed treatment in a single chapter.

‡ (a) The partial support of research grants from the National Institutes of Health, Bethesda, Maryland, and the National Science Foundation, Washington, D.C., is appreciated.

(b) I wish to acknowledge the assistance of Drs. Fred E. Regnier and George V. Odell in the preparation of certain portions of this chapter and to Dr. James A. Webster for reviewing the manuscript.

## CONTENTS

V. CATABOLISM	215
A. Catabolism by animals	215
1. Open-chain terpenoids	215
2. Cyclic terpenoids	218
B. Catabolism by micro-organisms	222
C. Catabolism by the organisms which produce them	224
VI. CONCLUSIONS	228
VII. REFERENCES†	228

† Literature survey does not go beyond June, 1967.
