

PHOSPHOLIPIDS, LIQUID CRYSTALS AND CELL MEMBRANES

R. M. WILLIAMS and D. CHAPMAN

Unilever Research Laboratory, The Frythe,
Welwyn, Herts., England

CONTENTS

	<i>Page</i>
INTRODUCTION	3
A. Distribution of phospholipids	3
B. Phosphoglycerides	4
II. PHYSICAL STUDIES ON DRY PHOSPHOLIPIDS	8
A. Introduction to polymorphism and thermotropic mesomorphism	8
1. Polymorphism	8
2. Nomenclature of the polymorphic forms	10
3. Thermotropic mesomorphism	11
4. State of the hydrocarbon chains in mesomorphic phases	13
B. Thermal analysis	15
C. Infrared spectroscopy	18
D. X-ray studies	21
1. Single crystal	21
2. Powder studies on synthetic phospholipids	23
(a) Phosphatidic acids	23
(b) 1,2-diacylphosphatidylethanolamines (cephalins)	23
(c) 1,3-diacylphosphatidylethanolamines (cephalins)	27
(d) 1,2-diacylphosphatidylcholines (lecithins)	27
(e) 1,2-diacylphosphatidylserines	30
3. Powder studies on natural phospholipids	31
III. PHOSPHOLIPID-WATER SYSTEMS	33
A. Introduction to lyotropic mesomorphism	33
1. The structure of the lyotropic phases	34
B. The lecithin-water system	36
1. 1,2-diacyl-L-phosphatidylcholine	36
2. Egg-yolk lecithin	39
3. The conformation of the choline head group	40

C.	Other phospholipid–water systems	41
1.	Nerve lipid extracts	41
2.	Egg-yolk phosphatidylethanolamine	41
3.	Sphingomyelin	41
4.	Egg-yolk lysolecithin	42
5.	Brain lipid extract	42
6.	Mitochondrial lipid extract	44
D.	Monolayer studies	46
E.	Phospholipid–cholesterol interactions	50
1.	Lecithin–cholesterol interaction	50
2.	Other phospholipid–cholesterol systems	54
F.	“Solutions” of phospholipids in water	55
G.	Nuclear resonance studies	58
H.	Electron spin resonance studies	62
	Experimental model membrane systems	63
I.	Summary of lyotropic mesomorphism	66
IV	PHOSPHOLIPID–NON-AQUEOUS SOLVENT SYSTEMS	69
V	BIOLOGICAL FUNCTIONS OF PHOSPHOLIPIDS	70
VI	CONCLUSIONS AND FUTURE STUDIES	74
	ACKNOWLEDGEMENTS	74
	REFERENCES	74
