547.438 LIT

CONTENTS

Preface xv
Acknowledgments xvii

1. Introduction

I. Triglyceride Molecules 2
A. Nomenclature 2
B. Complexity of Triglyceride Mixtures 8
II. History of Triglyceride Analysis 9
A. 1815–1955: Crystallization and Oxidation Techniques 9
B. 1956–1972: Chromatographic and Enzymatic Techniques 14
III. Applications of Triglyceride Analysis 15

2. Extraction. Isolation. Measurement. and Fatty Acid Analysis

I. Extraction of Lipids 17
II. Isolation of Triglycerides 19
A. Column Chromatography on Florisil 19
B. Column Chromatography on Silicic Acid 20
C. Thin-Layer Chromatography on Silicic Acid 22
D. Other Methods 23
III. Measurement of Total Triglyceride 25
IV. Fatty Acid Analysis 31
A. Methyl Ester Preparation 31

B. Column 32
C. Identification of Peaks 33
D. Quantitation 35

3. Preparation of Chemical Derivatives before Separation

I. Reactions at Double Bonds 38
A. Hydrogenation 38
B. Permanganate Oxidation 39
C. Ozonization 42
D. Epoxidation 43
E. Bromination 44
F. Mercuration 45
G. Other Reactions at Double Bonds 46
II. Reactions at Ester Linkages 46
A. Estolide Ester Cleavage 47
B. Interesterification 47
III. Reactions of Hydroxy, Epoxy, and Keto Groups 47
A. Acetylation 47
B. Trimethylsilyl Ethers 48
C. Hydrazone Formation 48

4. Silver Ion Adsorption Chromatography

I. Methods 50
A. Choice of Method 50
B. Thin-Layer Chromatography 50
1. Adsorbent 50
2. Solvent 51
3. Separation Procedure 52
4. Quantitation 53
C. Column Chromatography 55
1. Adsorbent 55
2. Solvent 55
3. Separation Procedure 55
4. Quantitation 56
II. Applications 57
A. Separation by Number of *cis* Double Bonds 57
1. Elution Order 57
2. Thin-Layer Chromatography 58
3. Column Chromatography 60
B. Isomer Separations 61
C. Other Functional Groups 64
D. Oxidized Triglycerides 64
E. Derived Diglycerides 65

5. Liquid–Liquid Partition Chromatography

I. Methods 68
A. Choice of Method 68
B. Thin-Layer and Paper Chromatography 68
1. Preparation of Plates and Paper 68
2. Solvent System 69
3. Separation Procedure 72
4. Quantitation 74
C. Column Chromatography 78
1. Solid Support 78
2. Solvent System 79
3. Separation Procedure 79
4. Quantitation 80
D. Countercurrent Distribution 81
1. Apparatus 81
2. Solvent System 81
3. Separation Procedure 85
4. Quantitation 86
II. Applications 86
A. Separation by Partition Number 86
1. Elution Order 86
2. Thin-Layer and Paper Chromatography 90
3. Column Chromatography 92
4. Countercurrent Distribution 93
B. Separation by Unsaturation 95
1. $AgNO_3$-Containing Solvent Systems 96
2. Brominated Triglycerides 98
3. Mercurated Triglycerides 100
C. Oxidized Triglycerides 100
D. Other Functional Groups and Derivatives 100
1. *Trans* Unsaturation 100
2. Hydroxy Triglycerides 101
3. Hydrogenated Triglycerides 101
E. Derived Diglycerides 102

6. Gas-Liquid Chromatography

I. Methods 105
A. Apparatus 105
B. Column 107
1. Solid Support 107
2. Liquid Phase 108
3. Column Tubing Material 109
4. Column Size 111
5. Single vs. Dual Columns 112
6. Column Preparation 112
C. Operating Conditions 114
1. Sample Injection 114

2. Carrier Gas 114
3. Column Temperature 115
4. Detector 117
5. Optimum Operating Conditions 118
D. Quantitation 118
1. Peak Identification 118
2. Linearity of Detector Response 119
3. Calibration 120
4. Accuracy 124

II. Applications 126
A. Separation by Carbon Number 126
B. Separation by Unsaturation 128
C. Separation, of Isomers 129
1. Isomeric Fatty Acids 129
2. Triglyceride Positional Isomers 130
3. Triglyceride Chain-Length Isomers 131
D. Hydroxy and Epoxy Triglycerides 131
E. Oxidized Triglycerides 132
F. Preparative Separations 133
G. Radioisotope Detection 135
H. Derived Diglycerides 137

7. Fractional Crystallization

I. Methods 140
A. Solvent 140
B. Procedure 141

II. Applications 142
A. Separation by Number of Saturated Acyl Groups 142
1. Solubility Considerations 142
2. Crystallization Sequence 143
3. Calculation of Triglyceride Composition 145
B. Separation by Number of Double Bonds 146
C. Oxidized Triglycerides 147
D. Other Derivatives 148

8. Other Separation Techniques

I. Silicic Acid Adsorption Chromatography 150
A. Methods 150
B. Separation by Molecular Weight 150
C. Separation by Unsaturation 153
D. Triglyceride Positional Isomers 153
E. Oxygenated Triglycerides 154
F. Brominated Triglycerides 158
G. Mercurated Triglycerides 158
H. Derived Diglycerides 159

II. Florisil Adsorption Chromatography 160
III. Aluminum Oxide Adsorption Chromatography 161
IV. Charcoal Adsorption Chromatography 162
V. Paper Chromatography 162
VI. Ion-Exchange Chromatography 162
VII. Permeation Chromatography 163
VIII. Thermal Gradient Chromatography 164
IX. Distillation 165

9. Partial Deacylation Reactions

I. Chemical Deacylation Methods 168
A. Grignard Reagents 168
1. Diglyceride Products 169
2. Monoglyceride Products 172
B. Other Reagents 172
II. Enzymatic Deacylation Methods 173
A. Pancreatic Lipase 173
1. Enzyme 174
2. Reaction Conditions 175
3. Specificity 176
4. Diglyceride Products 179
5. Monoglyceride Products 179
6. Free Fatty Acid Products 182
B. Milk Lipase 183
1. Diglyceride Products 184
2. Monoglyceride Products 184
C. Rhizopus arrhizus Lipase 184
D. Geotrichum *candidum* Lipase 185
1. Diglyceride Products 186
2. Monoglyceride Products 187
E. Other Lipases 187

10. Sterospecific Analysis

I. Methods 188
A. *sn*-1,2(2,3)-Diglyceride Method of Brockerhoff 189
B. *sn*-1,3-Diglyceride Method of Brockerhoff 190
C. Method of Lands 192
D. Choice of Method 194
E. Deacylation of Triglycerides to Representative Diglycerides 195
F. Phosphorylation of Diglycerides 196
1. Chemical Synthesis 196
2. Enzymatic Synthesis 197
G. Hydrolysis of Phospholipid with Phospholipase A 198

II. Applications 199
A. Positional Distribution of Fatty Acids 199
B. Composition of Triglyceride Mixtures 200
C. Composition of Derived Diglycerides 205

11. Physical Properties

I. Mass Spectrometry 206
A. Pure Triglycerides 207
B. Natural Triglyceride Mixtures 209
C. Derived Diglycerides 211
II. Melting Point 213
III. Differential Cooling Curves 216
IV. Infrared Spectroscopy 218
V. X-Ray Diffraction 221
VI. Nuclear Magnetic Resonance 222
VII. Rotation of Polarized Light 224
A. Triglycerides 224
B. Derived Diglycerides 227
VIII. Piezoelectric Effect 230
IX. Other Physical Constants 230

12. Distribution of Fatty Acids in Natural Triglyceride Mixtures

I. Positional Distribution Patterns 234
A. Plant Triglycerides 234
1. Palmitic, Stearic. C_{20}, C_{22}, and C_{24} Acids 234
2. Oleic, Linoleic, and Linolenic Acids 236
3. Other Acids 241
B. Animal Triglycerides 243
1. C_{20} and C_{22} Acids 243
2. Other Acids 246
II. Triglyceride Composition Patterns 248
A. I-Random–2-Random–3-Random Hypothesis 249
B. 1,3-Random–2-Random Hypothesis 250
C. Other Fatty Acid Distribution Hypothesis 251
1. 1,2,3-Random Hypotheses 251
2. Restricted Random Distribution 252
3. Even or Widest Distribution 252
4. Minor Fatty Acid Distribution Hypotheses 253
D. Validity of Distribution Hypotheses 253
1. Nonhomogeneous Origin of Many Natural Fats 253
2. Comparison of Experimental and Predicted Triglyceride Compositions 255
III. Biosynthesis of Triglycerides 261

13. Combining Methods for Detailed Analysis of Complex Triglyceride Mixtures

I. Combining Triglyceride Analysis Techniques. 266
A. Separation Techniques 266
B. Positional Analysis Techniques 270
II. Use of Derived Diglycerides of Analysis for Unresolvable Triglyceride Mixtures. 271
III. Maximum Analysis of Complex Triglyceride Mixtures. 272
IV. Major Unsolved Problems of Triglyceride Analysis 280
