

Contents

1. GENERAL CONCEPTS	1
1.1 Significance and Scope	1
1.2 Definition of Terms	2
1.3 Types of Metal Chelate Compounds	6
1.4 Representation of Metal-Ligand Bonds	9
1.5 Sequestering Agents	10
1.6 Types of Coördination Groups	12
1.7 Nomenclature of Metal Chelates and Coördination Compounds	13
2. THE PROPERTIES OF AQUEOUS METAL CHELATES	16
2.1 Hydrolysis of Metal Ions	16
2.2 Influence of Chelate Formation on Hydrolysis of Metals	23
2.3 Coordination Number	24
2.4 Stepwise Complex Formation	26
2.5 Completely Coordinated Metal Ions	28
2.6 Metal Chelates with Excess Coordinating Groups on the Ligand	31
2.7 Incompletely Coordinated Metal Ions	35
2.8 The pH Effect	40
2.9 Absorption Spectra	43

2.10	Oxidation Potential	49	
2.11	Type Formulas and Abbreviations	51	
3.	DETERMINATION OF THE FORMULAS OF METAL CHELATES		60
	Potentiometric Methods		
3.1	General Principles	60	
3.2	Formation of a Single Metal Chelate, MA	62	
3.3	Stepwise Formation of Higher Metal Chelates	67	
3.4	Formation of Hydroxo Metal Chelates	70	
3.5	Formation of Polynuclear Chelates	72	
	Spectrophotometric Methods		
3.6	Formation of a Single Metal Chelate Compound	78	
3.7	Successive Formation of Two Metal Chelate Compounds	81	
3.8	Consecutive Formation of Three Chelate Species	85	
	Polarographic Determination		
3.9	Principles of the Polarographic Method	87	
3.10	Determination of the Number of Ligands Round	90	
3.11	Variation of Half-Wave Potential with Solution pH	93	
	Miscellaneous Methods		
3.12	Conductance	96	
4.	THE STABILITIES OF METAL CHELATE COMPOUNDS		100
4.1	The Chelate Formation Constant	100	
	Methods for Determining Chelate Formation Constants		
4.2	Displacement of Hydrogen Ions by a Metal Ion	102	
4.3	Replacement of One Ligand by Another	109	
4.4	Replacement of One Metal Ion by Another	111	
4.5	Methods Based on Changes in the Standard Redox Potential	113	
4.6	Methods Based on Spectrophotometric Measurements	121	
4.7	Other Methods	124	
	Effect of Structure and Properties of Chelating Agent on Stability of Metal Chelate Compounds		
4.8	Size of Chelate Rings	125	
4.9	Number of Chelate Rings	128	
4.10	Effect of Ligand Basicity	130	
4.11	Influence of Steric Effects	133	
4.12	Entropy Considerations	137	

- 4.13 The Chelate Effect 140
- 4.14 Influence of Ligand Isomerism on the Stability of the Metal Chelate Compounds 144
- 4.15 Influence of Type of Coordinating Groups 149

Effect of Metal Ion

- 4.16 Correlations of Chelate Stability with the Nature of the Metal Ion 163

5. METAL BUFFERS

174

Principles

- 5.1 Nature of Metal Buffer Systems 174
- 5.2 Influence of pH on pM 177
- 5.3 Calculation of pM in Metal Buffer Systems 180
- 5.4 Influence of Metal Ion Hydrolysis 183
- 5.5 Influence of Precipitating Agents 187

Examples of Metal Buffer Systems

- 5.6 pM - pH Curves 192
- 5.7 Variation of pM Functions with Ligand Basicity 195
- 5.8 Simultaneous Control of pM and pH in Buffer Systems 198
- 5.9 Hydrolytic Tendencies of Metal Chelates from pM - pH Curves 203
- 5.10 Precipitation Tendencies of Metal Chelates from pM - pH Curves 206
- 5.11 Selective Precipitation 208
- 5.12 Masking Agents in Polarographic Analysis 211
- 5.13 General Considerations 214

6. METAL TITRATIONS

216

- 6.1 General Principles 216
- 6.2 Advantages of Chelating Agents in Metal Titrations 222
- 6.3 Metal Titrations with Polyamines 225
- 6.4 Metal Titrations with Aminopolycarboxylic Acids 227

Experimental Methods of Titration

- 6.5 General Discussion of Titration Procedures 231
- 6.6 Standard Chelating Agent and a pH Indicator 233
- 6.7 Excess Chelating Agent and Standard Base 235
- 6.8 Metal Indicators 240
- 6.9 Direct Titration with a Metal Indicator 253
- 6.10 Indirect Titrations with Metal Indicator 255
- 6.11 Titrations Based on a Change in Oxidation-Reduction Potential 258

6.12	Amperometric Titration with Standard Chelating Agent	263
6.13	Photometric Titration with Standard Chelating Agent	265
6.14	Coulometric Titrations	267
6.15	High Frequency Titrations	271
6.16	Selective Titrations of Mixtures	276
7.	COMMERCIAL APPLICATIONS OF CHELATING AGENTS	297
7.1	General Sources of Metal Ion Contamination	297
7.2	Commercially Important Sequestering Agents	298
	Uses Based on Reduction of Metal Ion Activity	
7.3	Soaps and Detergents	316
7.4	Textile Processing	322
7.5	Metal Cleaning	335
7.6	Stabilization	339
7.7	Concentration and Separation of Metals	344
7.8	Metal Plating	354
7.9	Food Products	357
7.10	Decontamination of Surfaces	361
	Applications Based on Direct Use of the Metal Chelate	
7.11	Leather	362
7.12	Polymerization	364
7.13	Metal Dyes	368
7.14	Catalysis of Chemical Reactions	378
7.15	Summary	393
8.	METAL CHELATES IN BIOLOGICAL SYSTEMS	416
	Evidence of Trace Metal Requirement	
8.1	Essential Elements	416
8.2	Trace Metal Deficiencies	420
	Biological Functions of Trace Metals	
8.3	Metal Chelates in Enzyme Systems	427
8.4	Porphine Derivatives	428
8.5	Redox Enzymes	429
8.6	Acid-Base Enzyme Catalysis	432
8.7	Role of Iron in Chlorophyll Synthesis	437
8.8	Chemical Reactions of Essential Metals in Biological Media	443
8.9	Carriers of Trace Metals in Soils	448
8.10	Carriers of Trace Metals in Physiological Systems	450

Use of Synthetic Metal Chelates in Biological Systems

- 8.11** Iron Chelates in Plant Nutrition **455**
8.12 Synthetic Chelates of Metals Other than Iron in Plant Nutrition **469**
8.13 Metal Chelates in the Nutrition of Microorganisms **471**
8.14 Implications of the Use of Synthetic Metal Chelates in Plants and Microorganisms **473**
8.15 Metal Chelate Compounds in Animal Nutrition **475**
8.16 Removal of Metals from Physiological Systems **477**
8.17 Redistribution of Metals and Other Effects of Chelating Agents in Physiological Systems **483**
8.18 The Role of Chelation in Pharmacological Action **487**

APPENDIX

- 1. Abbreviations of Some of the More Commonly Used Ligands** **505**
2. Method of Continuous Variations **508**
3. Metal-Ligand Equilibrium Constant Data **511**
4. *pH-pM* Data **586**

NAME INDEX **589**

SUBJECT INDEX **603**
