The numbering of the acridine ring	Front end paper
Preface	v
Notes on numbering the acridine ring	xi
<i>PART I: PREPARATIVE METHODS</i>	
CHAPTER	
1 Interconversion of acridines, acridones, and acridans	3
2 Synthesis of acridones and 9-chloroacridines by ring-closure of diphenylamine-2-carboxylic acids	29
3 The preparation of diphenylamine-2-carboxylic acids (phenylanthranilic acids) as starting material for the reactions of Chapter 2	56
4 Synthesis of acridines by ring-closure of diphenylamine-2-aldehydes, and -2-ketones	78
5 Synthesis of acridines from diphenylamine and organic acids. Preparation of diphenylamines	91
6 Synthesis of acridines from <i>m</i> -phenylenediamine(s) and formic acid	103
7 Synthesis of acridans from aromatic amines and aldehydes, or from their derivatives	114
8 Miscellaneous syntheses of acridones, acridines, and acridans	131
9 How to choose a suitable preparative method. Hints on the manipulation and purification of acridines	143
<i>PART II: PHYSICAL PROPERTIES</i>	
10 Surface Activity and Association. Ionization. Dipole Moments	155
11 Spectra. Fluorescence and phosphorescence	176
<i>PART III: CHEMICAL PROPERTIES</i>	
12 Chemical properties of acridines (excluding aminoacridines)	233
Alkyl-, aryl-, halogeno-, alkoxy-, hydroxy-, nitro-, and cyanoacridines	245
Acridine-aldehydes, -ketones, -carboxylic acids, -sulphonic acids, -arsonic acids, and -stibonic acids; also their derivatives	266
Nitrogen-oxides, thio-ethers, seleno-ethers	269
Benzacridines	274
13 Aminoacridines with no C-substituent	284
Aminacrine, Proflavine, Acridine Orange	

CHAPTER

- 14 Aminoacridines bearing C-substituents
Ethacridine ('Rivanol'), 'Entozon', Mepacrine (Quinacrine, 'Atebrin'), Aminoacrichine, 'Azacrin', 'Acranil'
Acridine Yellow, Benzoflavine, Chrysaniline, Flaveosin, Phosphine, Rheonine
- 15 Quaternary acridines
Acriflavine, Euflavine, 'Trypaflavin', 'Diamond Phosphine' and other quaternized dyes
- 16 Acridans, and other hydroacridines
Tacrine (tetrahydro-aminacrine). Carbazons, Carbazims
- 17 Acridones, thio- and seleno-acridones, tetrahydroacridones
- 18 Binuclear acridines
Biacridyls, biacridylidenes, biacridanyls, Luzigenin, Biacridonyls

PART IV: BIOLOGICAL PROPERTIES AND USES

- 19 The utilization of acridines in clinical medicine
General review. Antibacterials. Antimalarials 403
Anthelmintics. Anti-immune substances 430
Analeptics, and Morphine antagonists. 421
- 20 The connexion between *antibacterial action* and physicochemical properties in the acridine series
- 21 The connexion between *antimalarial action* and chemical structure in the acridine series. *Trypanocidal action*
- 22 Complexes of acridines with nucleic acid. Vital staining, antiviral action, mutogenesis, antimetabolic activity
- 23 Vertebrate pharmacology and toxicology of acridines. Action on enzymes. Carcinogenicity and anticarcinogenicity

PART V: DYES AND REAGENTS

- 24 The utilization of acridines as pigments and dyestuffs
- 25 Other applications of acridines. Analytical uses, Antioxidants and corrosion inhibitors, Biochemical Reagents, Chemiluminescence, Energy Cells, Industrial disinfection and preservation, Microscopical reagents, Photographic reagents
