

## CONTENTS

<b>CHAPTER</b>	<b>SIGNIFICANCE OF CHEMICAL ANALYSIS OF POLYCYCLIC AROMATIC COMPOUNDS AND RELATED BIOLOGICAL SYSTEMS</b>	
	<i>Tuan Vo-Dinh</i>	
	1. Introduction	
	2. Polycyclic Aromatic Compounds: From PAH to PAC	
	3. Definition of PACs	3
	4. Occurrence and Detection of PACs	4
	4.1. Energy Sources	5
	4.2. Industrial and Urban Environments	5
	4.3. Indoor Air	8
	4.4. Foods	9
	4.5. Marine Environments	9
	4.6. Plants	9
	5. Importance of Heterocyclic PACs	9
	5.1. Nitrogen-Containing PACs	
	5.2. Oxygen-Containing PACs	16
	5.3. Chlorine-Containing PACs	16
	5.4. Sulfur-Containing PACs	17
	6. Bioindicators for PACs: The New Frontier in Chemical Analysis	17
	6.1. Bioindicators	17
	6.2. Analytical Techniques	22
	Acknowledgment	25
	References	25

<b>CHAPTER 2 THE FATE OF POLYCYCLIC AROMATIC COMPOUNDS IN THE ATMOSPHERE AND DURING SAMPLING</b>	<b>31</b>
<i>Douglas A. Lane</i>	
1. Abbreviations	31
2. Introduction	32
2.1. Formation and Emission of PACs	33
2.2. Vapor Pressure and Temperature	33
2.3. Particle Size Distribution	35
3. Chemical and Photochemical Reactions of PACs	35
3.1. Singlet Molecular Oxygen	35
3.2. PAH Oxidation under Simulated Atmospheric Conditions	40
3.3. Ozonolysis Reactions	43
3.4. PAH Ozonolysis under Simulated Atmospheric Conditions	44
3.5. OH Radical Reactions	47
3.6. Reactions with Oxides of Nitrogen and Nitric Acid	47
3.7. Reaction with Sulfur Oxides	49
3.8. Reactions with Other Species	50
4. Implications for Chemical Analysis of PACs	50
References	52
<b>CHAPTER 3 GAS- AND LIQUID-CHROMATOGRAPHIC TECHNIQUES</b>	<b>59</b>
<i>John C. Fetzer</i>	
1. Introduction	59
2. Gas Chromatography	61
2.1. Analysis of PAC by GC	61
2.1.1. Bonded Phases in High-Temperature GC, 61	
2.1.2. Liquid-Crystal Phases, 63	
2.2. GC Detectors for PAC Analysis	64
2.3. Applications of GC to PAC Analysis	68

3. High-Performance Liquid Chromatography	71
3.1. The Application of HPLC Versus GC	71
3.2. Separations by Ring Number or Shape	73
3.3. HPLC Detectors for PAC Analysis	84
3.3.1. <i>Full-Spectrum Absorbance and Fluorescence Detectors</i> , 85	
3.3.2. <i>The Use of Laser-Based Detectors</i> , 94	
3.3.3. <i>The Use of GC Detectors in Micro-LC</i> , 95	
3.3.4. <i>Preparative-Scale HPLC with Secondary Detection</i> , 97	
3.4. Applications of HPLC to PAC Analysis	98
4. Summary	100
References	101
<b>CHAPTER 4 CAPILLARY SUPERCRITICAL FLUID CHROMATOGRAPHY METHODS</b>	<b>111</b>
<i>Bob W. Wright and Richard D. Smith</i>	
1. Introduction	111
2. Properties of Supercritical Fluids	112
3. Chromatography with Supercritical Mobile Phases	118
3.1. Capillary vs. Packed-Column Considerations	119
4. Instrumentation	120
4.1. Pumping and Injection Systems	121
4.2. Capillary Columns	123
4.3. Restrictors	126
5. Applications	128
5.1. Flame Detection	128
5.2. UV and Fluorescence Detection	132
5.3. SFC-Mass Spectrometry	138
6. Related Techniques	143
6.1. Supercritical Fluid Extraction	143
6.2. Supercritical Fluid Fractionation	146
Acknowledgment	
References	

**CHAPTER 5 MICELLE-MEDIATED METHODOLOGIES FOR THE PRECONCENTRATION AND SEPARATION OF POLYCYCLIC AROMATIC COMPOUNDS**

*Willie L. Hinze, H. N. Singh, Zheng-Sheng Fu, Ronald W. Williams, Donald J. Kippenberger, Martin D. Morris, and Fawzy S. Sadek*

1. Introduction	151
2. Micellar-Facilitated Sampling Considerations	152
3. Micelle-Mediated Extraction/Preconcentration of PACs	155
3.1. Cloud-Point Extractions	155
3.2. Extractions Based on the Differential Solubilizing Ability of Micelles	157
4. Micellar-Enhanced Ultrafiltration	159
5. Micellar Systems in Chromatographic Separation and Detection Schemes	159
5.1. Micellar Electrokinetic Capillary Chromatography	160
5.2. Micellar Liquid Chromatography	161
5.3. Micellar-Enhanced Detection	165
6. Conclusions	166
Acknowledgments	166
References	167

**CHAPTER 6 ULTRAVIOLET ABSORPTION AND LUMINESCENCE SPECTROMETRY: AN OVERVIEW OF RECENT DEVELOPMENTS**

*M. Zander*

1. Introduction	171
2. UV Absorption Spectrometry in PAC Analysis	171
2.1. Identification and Quantitative Determination	171
2.2. Structure Elucidation	175
3. Luminescence Spectrometry in PAC Analysis	176
3.1. Sensitivity	177
3.1.1. <i>External Heavy-Atom Effects, 178</i>	
3.1.2. <i>Instrumental Factors, 180</i>	

3.2. Selectivity	181
3.2.1. <i>Selective Fluorescence Quenching, 181</i>	
3.2.2. <i>Selective Phosphorescence Enhancement, 183</i>	
3.2.3. <i>Excitation-Energy Selection Techniques, 184</i>	
3.2.4. <i>Synchronous Luminescence Spectrometry, 188</i>	
3.3. Structure Elucidation	190
4. On the Role of Electronic Spectroscopic Methods in PAC Analysis	193
References	196
<b>CHAPTER 7 PHASE-RESOLVED FLUORESCENCE SPECTROSCOPY</b>	<b>201</b>
<i>Linda B. McGown and Kasem Nithipatikom</i>	
1. Introduction	201
2. Theory	202
3. Instrumentation	205
4. Applications	206
4.1. Phase-Resolved Spectra	206
4.2. Quantitative Analysis of Multicomponent Systems	208
4.3. Phase-Resolved Suppression of Scattered Light	212
4.4. Qualitative Analysis	214
5. Conclusions	217
References	218
<b>CHAPTER 8 MASS SPECTROMETRY OF POLYCYCLIC AROMATIC COMPOUNDS</b>	<b>219</b>
<i>Ronald A. Hites</i>	
1. Introduction	219
2. Electron-Impact Ionization	219
3. Positive Chemical Ionization	228
4. Negative Ion Techniques	232
4.1. Ionization by Electron Capture	232
4.2. Ionization by Reactions with Oxygen	239
5. Desorption Ionization Techniques	242
6. Multiphoton Ionization	248
7. Tandem Mass Spectroscopy	250

8. Liquid and Supercritical Fluid Mass Spectrometry	257
9. Summary	258
Acknowledgments	259
References	259

<b>CHAPTER 9 LASER MULTIPHOTON IONIZATION SPECTROSCOPY OF POLYATOMIC MOLECULES</b>	<b>263</b>
<i>Konstadinos Siomos</i>	
1. Introduction	263
1.1. Scope of the Chapter	263
1.2. Photoionization and Medium-Dependent Processes	264
1.2.1. <i>Effects of the Medium on the Spectroscopy of Molecules, 266</i>	
1.2.2. <i>The Electron and Ion State in the Condensed Phase, 268</i>	
1.2.3. <i>Effect of the Medium on the Ionization Processes, 268</i>	
2. Multiphoton Ionization	271
2.1. Multiphoton Absorption	271
2.2. Multiphoton Ionization	272
2.2.1. <i>Nonresonant (Coherent) Ionization, 272</i>	
2.2.2. <i>Frequency Dependence of the MPI Cross Section, 273</i>	
2.2.3. <i>Multiple Resonant (Stepwise) Ionization, 274</i>	
3. Experimental Techniques and Procedures	276
3.1. The Laser as Spectroscopic Light Source	276
3.1.1. <i>General Considerations, 276</i>	
3.1.2. <i>The Frequency Tunable Dye Laser, 277</i>	
3.2. Ionization Detection Techniques and Procedures	280
3.2.1. <i>The Photoionization Cell Detector: Measurements of Total Ionization Currents, 280</i>	
3.2.2. <i>The Multiphoton Ionization Mass Spectrometer: Selection and Identification of Ionic Species, 284</i>	

## CONTENTS

3.2.3. <i>Multiphoton Ionization Gas Chromatograph-Mass Spectrometer: Analysis of Complex Molecular Systems, 287</i>	
3.2.4. <i>Liquid-Phase Multiphoton Ionization Spectrometer: In Situ Detection of Organic Compounds, 287</i>	
4. Multiphoton Ionization of Polyatomic Molecules: Experiments and Results	293
4.1. Gaseous-Phase Experiments	293
4.1.1. <i>Non-Mass-Selective Measurements, 293</i>	
4.1.2. <i>Mass-Selective Multiphoton Ionization Measurements, 297</i>	
4.2. Liquid-Phase Experiments	301
4.2.1. <i>Multiphoton Ionization at Fixed Excitation Photon Energy, 301</i>	
4.2.2. <i>Multiphoton Ionization with Variable Excitation Photon Energy, 303</i>	
4.2.3. <i>Multiphoton Ionization as a Highly Sensitive Detection Technique in the Liquid Phase, 315</i>	
5. Multiphoton Ionization Detection: Future Developments and Limitations	319
Acknowledgments	320
References	320

## CHAPTER 10 MULTIDIMENSIONAL RESONANCE TWO-PHOTON IONIZATION MASS SPECTROMETRIC-BASED ANALYSIS 327

*S. J. Weeks, A. P. D'Silva, and R. L. M. Dobson*

1. Introduction	327
2. Background	328
2.1. The Analytical PAC Problem	328
2.2. Conventional Methods	330
2.3. Laser-Based Techniques	331
2.3.1. <i>Solid-State Cryogenic Fluorescence Approaches, 332</i>	
2.3.2. <i>Supersonic Expansion Fluorescence Techniques, 332</i>	
3. Resonance Two-Photon Ionization Mass Spectrometry (R2PI-MS)	336
3.1. Gas-Phase Laser-Analyte Interactions	336

3.2. Instrumentation	339
3.2.1. Sample Introduction, 339	
3.2.2. Lasers, 340	
3.2.3. Mass Spectrometers, 340	
4. Applications of R2PI-MS for PAC Determinations	342
4.1. R2PI-FTMS	342
4.2. SFI-RC-R2PI-TOFMS	344
4.3. LD-R2PI-TOFMS	345
4.4. CGC-R2PI-TOFMS	347
4.5. CGC-R2PI-TOFMS-TECD-LIF-FID	348
5. Summary: R2PI-MS for PAC Determinations	355
References	356
<b>CHAPTER 11 PHOTOTHERMAL SPECTROSCOPY</b>	<b>361</b>
<i>Michael D. Morris</i>	
1. Introduction	361
2. Thermal Lens Theory	363
2.1. General Aspects	363
2.2. The Single-Beam Thermal Lens	365
2.3. The Dual-Beam Thermal Lens	368
2.4. The Pulsed Thermal Lens	370
2.5. Path-Length Dependence of the Thermal Lens	371
2.6. Transverse Photothermal Deflection	372
2.7. Spatially Multiplexed Transverse Photothermal Deflection	374
3. Applications of Photothermal Techniques	378
3.1. Liquid Chromatography Detectors	378
3.2. Thin-Layer Chromatography Detectors	384
3.3. Photothermal Detectors for FTIR	386
4. Summary	388
References	389
<b>CHAPTER 12 IMMUNOLOGICAL METHODS FOR THE DETECTION AND QUANTITATION OF EXPOSURE TO AROMATIC HYDROCARBONS</b>	<b>391</b>
<i>Regina M. Santella and Marina Stefanidis</i>	
1. Introduction	391

2. Antibody Development	391
3. Immunoassays	393
4. Advantages	395
5. Benzo[ <i>a</i> ]pyrene	396
6. DNA Adducts	398
7. Immunofluorescence Detection	403
8. Protein Adducts	403
9. Nitroaromatics	404
10. Future Applications	406
11. Summary	407
Acknowledgments	407
References	407
<b>CHAPTER 13 RECENT ADVANCES IN INFRARED ANALYSIS OF POLYCYCLIC AROMATIC COMPOUNDS</b>	<b>411</b>
<i>Phil Stout and Gleb Mamantov</i>	
1. Introduction	411
2. MI-FTIR Spectroscopy	412
3. Chromatographic Techniques	412
4. Specialized Techniques	425
4.1. Photoacoustic Spectroscopy	425
4.2. Triplet-State Spectroscopy	427
4.3. Other Techniques	430
5. Conclusion	431
Acknowledgments	431
References	431
<b>CHAPTER 14 RAMAN SPECTROSCOPY</b>	<b>433</b>
<i>D. L. Gerrard and H. J. Bowley</i>	
1. Introduction	433
2. The Resonance Raman Effect	438
3. Raman Spectroscopy of Polycyclic Aromatic Compounds	442
3.1. Nonresonance Raman Spectroscopy	442
3.2. Resonance-Enhanced Raman Spectroscopy	443
3.2.1. <i>Resonance Raman Spectroscopy Using CW Lasers, 443</i>	

	<i>3.2.2. Resonance Raman Spectroscopy Using Pulsed UV Lasers, 444</i>	
	4. Quantitative Studies	448
	5. Conclusions	448
	Acknowledgment	449
	References	449
<b>CHAPTER 15</b>	<b>SURFACE-ENHANCED RAMAN SPECTROSCOPY</b>	<b>451</b>
	<i>Tuan Vo-Dinh</i>	
	1. Introduction	451
	2. Principle of the SERS Effect	453
	2.1. Electromagnetic Model for SERS	453
	2.2. The Chemical Effect in SERS	455
	2.3. Characteristics of SERS	455
	3. Instrumentation	456
	4. SERS Techniques	459
	4.1. Metal Electrodes	459
	4.2. Colloid Hydrosols	460
	4.3. Metal Island Films	462
	4.4. Silver-Coated Microsphere Substrates	464
	4.5. Substrates with Silver-Coated Titanium Dioxide Particles	465
	4.6. Silver-Coated Fumed Silica Substrates	466
	4.7. Silver-Coated Quartz Posts	467
	4.8. Metal-Coated Cellulose Substrates	468
	4.9. Silver Membranes	469
	4.10. Chemically Etched Metal Surfaces	471
	5. Analysis of Complex Mixtures	474
	6. Analytical Considerations	477
	7. Conclusion	482
	Acknowledgments	482
