

## CONTENTS

1. Microspectroscopy and Imaging of Polymers	1
Microscopy and Imaging of Polymers	1
Where Are We Going	14
2. Basic of Imaging	17
Elementary Optical Consideration for Imaging	17
Elementary Fourier Transform for Considerations	20
An Example of the Impulse Function Magnification	23
The Optical Transfer Function	24
Image Development using Ray Tracing Considerations	26
Imaging of Simple Systems	31
Optical System Design	32
3. Acquisition of Images	35
Methods of Obtaining Spectroscopic Images	35
Factors Influencing Image Acquisitions	38
Imaging Instrumentation	38
Detectors for Spectral Imaging	46
Spatial Positioning and Focusing	56
Resolution	57
Spectroscopic Considerations	62
Microspectroscopic Measurements	64
Relationship between Macroscopic and Microscopic Measurements	66
Summary	67
4. Image Analysis	69
Image Analysis	69
Image Processing	71
Image Rectification	73
Image Enhancement	74
Image Restorations	76
Image Reconstructions	76
Image Understanding	76
Computational Techniques for Image Enhancement	78
Signal Processing	86
Use of Factor Analysis for Image Enhancement	89
Image Enhancement using Interactive Self-Modeling Multivariate Analysis	91
Expectations for the Future	93

5. Experimental Imaging	95
Optical Effects	95
Contributions Due to Photon Noise	105
Sampling Anomalies	111
Imaging Acquisition Strategies	114
6. Optical Microscopy	121
Optical Microscopy	121
Methods of Optical Microscopy	122
Confocal Microscopy	123
UV-Visible Spectroscopy	125
Fluorescence Imaging	126
Near-Field Scanning Optical Microscope	128
Applications of Microscopy of Polymers	129
Video Microscopy	129
7. Infrared Microspectroscopic Imaging	133
Introduction	133
Elementary Theory of Infrared Spectroscopy	133
Selection Rules	135
Spectral Parameters	136
Quantitative Absorbance Spectroscopy	137
Optical Considerations in the Infrared	138
Infrared Sampling Techniques	139
Infrared Instrumentation	153
Infrared Microscopes	158
Spatial Resolution Enhancement Using Infrared Microscopes	162
Near-Infrared Imaging	163
Near-Field Near Infrared Imaging	164
Mid-Infrared Microspectroscopic Imaging	164
Infrared Microscopic Experiments	167
8. Applications of FTIR Microspectroscopy	173
Analysis of Contamination	173
Identification of Surface Imperfections	177
Identification of Polymer Microsamples	177
Microanalysis of Multicomponent Phases in Polymers	185
FTIR Microspectroscopy of Phase Separated Polymer Systems	187
FTIR Microspectroscopy of Adhesives Systems	199
FTIR Micromapping of Interfaces in Fiber-Reinforced Composites	209
FTIR Microspectroscopy of Diffusion Processes in Polymers	227
FTIR Microspectroscopy of Polymer Orientation	230

FTIR Microspectroscopy of Lubricants on Metal Surfaces	231
FTIR Microspectroscopy of Crack Growth in Polymers	232
9. Raman Microscopy and Imaging	237
Introduction to Raman Spectroscopy	237
Advantages of Raman Spectroscopy Compared to TR Spectroscopy	241
Fluorescence Interface with Raman Spectroscopy	248
Raman Instrumentation	248
Micro-Raman Mapping and Imaging	257
Point-by-Point Raman Imaging Instrumentation	257
Raman Microline Imaging	259
Raman Global Microscopy	260
Applications of Raman Microscopy and Mapping	274
Summary and Speculations about the Future	290
10. Nuclear Magnetic Resonance Imaging	297
Resolution in NMRI	303
Utility of NMRI	304
Contrast in NMRI	305
Chemical-Shift Imaging	307
Application of Measurements of Spin-Density by NMRI to Polymers	310
Application of NMRI Utilizing Changes Motion of Molecules	345
NMRI of Rigid Polymeric Solids	370
Three-Dimensional Reconstruction of Images	372
NMRI of $^{13}\text{C}$ Chemical Shifts	372
Current Capabilities and Future Prospects	373
Glossary	379
Index	401
