Carotinoid-epoxyde und furanoide Oxide von Carotinoidfarbstoffen. Von P. KARRER, Universität Zürich.....	1
I. Vorkommen, Konstitution und Partialsynthesen der Carotinoid-epoxyde	1
II. Die furanoid gebauten Carotinoid-epoxyde	6
III. Die Molekularstruktur der Carotinoid-epoxyde	12
IV. Biologische Bedeutung der Carotinoid-epoxyde	14
Literaturverzeichnis.....	17

Some Biochemical Aspects of Marine Carotenoids. By D. L. FOX, Scripps Institution of Oceanography of the University of California, La Jolla, California	20
--	----

Introduction	21
Marine muds	21
Marine animals in general	23
Protista	24
Sponges	25
Coelenterates	26
Worms	27
Echinoderms	28
Mollusks	29
Crustaceans	30
Tunicates	31
Fishes	32
Mammals	34
Conclusions	34
References	36

Azulenens. By A. J. HAAGEN-SMIT, California Institute of Technology, Pasadena, California	40
--	----

Introduction	40
Isolation and purification	41
Physical properties	41
Chemical properties	44
Structure determination	45
Nomenclature	46
Structure of naturally occurring precursors of azulenes	47
Synthesis of Azulenes	49
Absorption spectra	57
Some biochemical aspects	62
Further possible types of azulenes	65
Pharmacological properties of azulenes	66
References	67

Recent Advances in the Study of Component Acids and Component Glycerides of Natural Fats. By T. P. HILDITCH, The University of Liverpool.....	72
--	----

Introduction: Discussion of the "Rule of even distribution"	72
---	----

Spectrophotometric determination of certain unsaturated higher fatty acids..	75
Resolution of mixed fatty acids by crystallisation from solvents at low temperatures	76
Partial resolution of mixed glycerides in natural fats by crystallisation from solvents at low temperatures	81
The present state of knowledge of the glyceride structure of natural fats ..	86
1. Fats with three (or at most four) major component acids	86
(a) Fats in which saturated acids predominate over unsaturated (oleic) acids	86
(b) Fats in which oleic, linoleic and/or linolenic acids predominate	87
2. Computation of component glycerides from the proportions of the component fatty acids in a fat.....	88
3. Fats with four or more component acids in similar proportions	89
4. Animal body fats rich in stearic acid and animal milk fats containing notable proportions of butyric and/or other lower saturated acids.....	90
(a) Animal body fats	90
(b) Animal milk fats	93
5. Synthesis and transformation by chemical means of mixed glycerides in the laboratory	95
References	96

Enzymatically Synthesized Polysaccharides and Disaccharides.

By W. Z. HASSID and M. DOUDOROFF, The University of California, Berkeley, California

Introduction	101
Formation of starch and glycogen through the phosphorylytic condensation..	102
Conditions affecting polysaccharide formation.....	104
Synthetic polysaccharides	106
Arsenolysis and phosphorylysis of amylose and amylopectine.....	107
Phosphorylase	108
The mechanism of dextran and levan formation	109
Mechanism of sucrose formation	111
Specificity of sucrose phosphorylase	115
<i>D</i> -glucosido- <i>D</i> -xyloketoside, <i>D</i> -glucosido- <i>L</i> -araboketoside and <i>D</i> -glucosido- <i>L</i> -sorboside	116
α - <i>D</i> -glucosido- <i>L</i> -arabinose	118
Formation of sucrose and other disaccharides through exchange of glycosidic linkages	121
References	123

Recent Developments in the Structural Problem of Cellulose. By

E. PACSU, Princeton University, and The Textile Foundation, Princeton, New Jersey

I. The linear structure of cellulose	128
Introduction	128
Critical review of the proofs supporting the linear structure of cellulose	130
1. Nature and uniformity of the building units	130
2. Location and number of the free hydroxyl groups	130
3. The chemical proof of the constitution of cellulose	131
4. The polarimetric proof of the constitution of cellulose.....	132
5. The kinetic proof of the constitution of cellulose	132

6. The static proof of the constitution of cellulose	134
7. The X-ray pattern of cellulose	134
Molecular weight determination of cellulose	135
A. Chemical methods	135
B. Physical methods	138
Oxycellulose	140
Hydrocellulose	144
Conclusions regarding the linear structure of cellulose	145
II. The laminated chain structure of cellulose	146
Theory of ester linkages	146
Theory of blocked hydroxyl groups	150
Theory of looping bonds	151
Theory of acid-sensitive bonds and the principle of periodicity	155
Theory of acetal linkages in equi-distant open-chain units and the laminated chain structure of cellulose	158
A. Heterogeneous and homogeneous degradation of cellulose in acidic media	158
B. The concept of „limit hydrocellulose“	160
C. Proposed structure of cellulose	163
References	170
✓ Lignin. By F. E. BRAUNS, The Institute of Paper Chemistry, Appleton, Wisconsin	175
I. Occurrence, formation and detection	175
The state of lignin in wood	175
Lignin-complexes in wood	179
Formation, detection and estimation of lignin	180
II. Isolation of lignin	182
III. Properties and conversions of lignin	186
Physical properties	186
Various conversions	188
Vanillin from lignin	192
Oxidation, reduction and halogenation	193
Nitration	195
Sulfonation	195
Ethanolysis of wood and lignin	199
Hydrogenation	200
Experiments on the synthesis of lignin and similar products	208
Decomposition	211
IV. The structure of lignin	213
ERDTMAN's concept of the lignin structure	213
FREUDENBERG's concept of the lignin structure	217
HIBBERT's concept of the lignin structure	217
Conclusions	224
References	225
✓ The Chemistry of the Constituents of Toad Venoms. By V. DEULOFEU, Facultad de Ciencias Exactas, Físicas y Naturales, Buenos Aires, Argentina	241
Introduction	241

I. The bufagins	242
Main representatives of the bufotalin class	246
Bufotalin	246
Marinobufagin	249
Gamabufagin (gamabufotalin, gamabufogenin)	249
Cinobufagin	250
Cinobufotalin, Bufalin	252
Pseudo-desacetyl-bufotalin	252
Pharmacology of the bufagins	253
II. Bufotoxins	254
Main representatives of the bufotoxin class	255
Bufotoxin	255
Arenobufotoxin	256
Gamabufotoxin	256
Marinobufotoxin	256
Pharmacology of the bufotoxins	256
III. Basic constituents of toad venoms	257
Bufotenine	257
Pharmacology of bufotenine	259
Bufotenidine	259
Pharmacology of bufotenidine	260
Bufothionine	260
Dehydro-bufotenine	261
Pharmacology of dehydro-bufotenine	261
<i>L</i> -Adrenaline	261
IV. Sterols	262
V. Suberic acid	262
References	262
Biochemistry of Fish Proteins. By E. GEIGER, The University of Southern California, Los Angeles, California	267
Introduction	267
Composition of fish muscle protein	268
Amino acid content of fish muscle protein	272
Nutritive value of fish protein	275
Feeding experiments	275
Evaluation of results	281
Fish blood proteins	284
Fish collagens	287
Fish proteins with enzymatic activity	289
Proteins isolated from fish sperm	289
Pharmacological effects of some histones and protamins	291
Proteins isolated from female reproductive organs of fish	294
References	294
Some Recent Developments in Chemical Genetics. By G. W. BEADLE, California Institute of Technology, Pasadena, California	300
Classical genetics	300
Chemical genetics	302

Phenylalanine metabolism	304
Antigen specificity	306
Hemophilia	307
Gene-directed specific reactions in other organisms	308
Neurospora	310
Nature and action of genes	317
Gene mutation	318
Universality of genes	320
Cytoplasmic factors	321
Genes and evolution	324
Conclusions	326
References	326
Infrared Spectroscopy in Structure Determination and its Application to Penicillin. By R. S. RASMUSSEN, Shell Develop- ment Company, Emeryville, California	331
Introduction	331
I. Experimental methods	332
1. Instruments	332
2. The transmission curve	333
3. Absorption cells for vapor and liquid samples	336
4. Solid samples	337
II. Interpretation of infrared spectra	338
1. General	338
2. Group vibrations and frequencies	341
3. Vibrational frequency assignments	343
4. Comparison of <u>infrared and Raman</u> spectra	344
III. General features of infrared spectra of organic compounds	345
1. Paraffin hydrocarbons	345
2. Cycloparaffins	347
3. Olefins; bands associated with the carbon-carbon double bond	348
4. Conjugated carbon-carbon double bonds	354
5. Alkyl-benzenes; bands of aromatic ring systems	356
6. Acetylenes	361
7. Alkyl halides; the carbon-chlorine stretching band	361
8. Alcohols, phenols and ethers	362
9. Amines, mercaptans and sulfides	364
10. Carbonyl compounds	364
a) Aldehydes	367
b) Ketones	367
c) Carboxylic esters	369
d) Carboxylic acids	370
e) Salts of carboxylic acids	370
f) Acid halides	371
g) Acid anhydrides	371
h) Amides of carboxylic acids	371
11. Carbonic acid derivatives	373
12. Compounds containing carbon-nitrogen double bonds	373

13. Nitriles	373
14. Nitro compounds	373
15. Sulfones and sulfonates	374
16. More complicated structures	374
IV. Applications to structure determinations.....	374
Penicillin	376
V. Conclusion	379
