

CONTENTS

SPECIAL LECTURES

History of Japanese natural product research	1
Chemistry of some dimeric indole alkaloids	21
Some studies in the biogenesis of plant products	35
The structure of tetrodotoxin	49
Intermolecular rearrangements in peptide systems: hydroxyl and amino-acyl incorporation into Peptides	75
High resolution mass spectrometry of natural products	95
Specification of the stereospecificity of some oxido-reductases by diamond lattice sections	119
Progress in the synthesis of polycyclic natural products	131
Peptides of Amanita phalloides	145
Isotope labelling and mass spectrometry of natural products	159
Recent advances in X-ray analysis of natural product structures	179
