

CONTENTS

I. THE BASIC THEORY OF CHROMATOGRAPHY AND SOME GENERAL PRINCIPLES	1
1. Introduction	1
2. Derivation of R_F and R_M values	6
3. Solvent-solute interactions	11
4. Chemical structure and chromatographic behaviour	19
5. Partition coefficients and solvent systems	27
6. The effect of temperature	31
7. Formation of several species of solute	31
II. CHROMATOGRAPHY SEPARATION OF STEROIDS	33
<i>Section 1: Descriptive</i>	33
1. Introduction	33
2. Special features of the chromatography of steroids	34
3. Adsorption methods	36
4. Partition chromatography	43
<i>Section 2: Quantitative Treatment of Steroid Behaviour on Chromatograms</i>	83
1. ΔR_{Mg} values in typical solvent systems	85
2. ΔR_{Mg} values in atypical solvent systems	96
3. ΔR_{Mg} and R_{Mr} values	102
4. Solvent-solute interactions and ΔR_{Mg} values	118
III. TECHNIQUES AND APPARATUS	133
1. Transfer operations and volumetric error	133
2. Column chromatography	144
3. Paper chromatography	158
4. Preparation of extracts suitable for chromatography	191
IV. QUANTITATIVE CHROMATOGRAPHY: COLORIMETRIC AND RADIOISOTOPIC TECHNIQUES	201
1. Introduction	201
2. General procedure	203
3. Chromatographic selectivity	208
4. Modifying steps	214
5. Chromatographic technique in quantitative methods	218
6. Direct scanning of paper chromatograms	222

7. Logistics of quantitative estimations using chromatography	246
8. Use of radioactive isotopes in quantitative chromatography	247
9. Complication and simplicity	253
V. STRUCTURAL ANALYSIS AND IDENTIFICATION OF STEROIDS BY CHROMATOGRAPHY	256
1. The basic of the classical methods	256
2. The basic of chromatographic identification	258
3. General procedure for structure determination	262
4. Examples of structure determination	264
5. Systematic investigation of unknown steroids	280
6. General properties of simple functional groups	283
7. Special properties of simple complex functional groups	290
8. Spectroscopic properties, colour and fluorescence reactions	297
9. Future developments	300
10. General procedure using ΔR_{M_s} and ΔR_{M_g} values	304
VI. SOME TYPICAL ANALYTICAL PROBLEMS OF STEROID BIOCHEMISTRY	311
1. Introduction	311
2. Cortisol in human blood	311
3. Oestrogens in human urine	312
4. Progesterone in blood or urine	316
5. Aldosterone in urine	317
6. Testosterone in blood or urine	324
7. Difficult separations of non-polar steroid	327
8. Conjugates of urinary steroids	328
9. Fractionation and estimation of urinary steroids	336
10. Conclusion	346
APPENDICES	347
I. PURIFICATION OF REAGENTS AND MATERIALS	347
1. Solvents	347
2. Adsorbents	352
3. Kieselguhr ("Celite")	353
4. Cellulose	354
5. Glassware	355
6. Reagents	356

II. MICROCHEMICAL REACTIONS FOR STEROIDS	358
III. METHODS OF DETECTION ON PAPER CHROMATOGRAMS	372
1. Selective Absorption of Light	372
2. Colour and Fluorescence Reactions	373
3. Detection of Redioactive Material	382
IV. CALCULATIONS WITH R_F AND R_M VALUES	383
How to Use the Tables	383
