

CONTENTS

<b>I. Introduction</b>	<b>1</b>
<b>II. Nomenclature, stereoisomerism, and structural formulas of typical steroids</b>	<b>4</b>
<b>III. Chromatography on columns</b>	<b>10</b>
A. Adsorption chromatography	11
1 Methods of procedure	11
2 Adsorbents	13
3 Solvents	19
4 Equipment	24
5 Preparation of the column	25
6 Execution of the chromatography	27
7 Description of the chromatography	33
8 Specific examples	34
9 Side reactions of steroids with the adsorbents	52
10 Constitution and chromatography behavior (elution series)	55
B. Partition chromatography	58
1 Methods of procedure	58
2 Supporting media	60
3 Solvents	62
4 Equipment	65
5 Preparation of the column	66
6 Execution of partition chromatography	70
7 Description of the chromatograms	72
8 Specific examples	73
9 Concluding remarks	86
<b>IV. Paper chromatography (PC)</b>	<b>87</b>
1 Procedures	88
2 Special examples	160
3 Relation of chemical structure and chromatographic mobilities	228

<b>V. Thin layer chromatography (TLC)</b>	<b>239</b>
1 Introduction	239
2 Methods of procedure	241
3 Absorbents or supporting media	243
4 Preparation of thin layers (chromatoplates)	245
5 Choice of solvents	250
6 Execution of analytical and preparative TLC	253
7 Detection and evaluation methods	258
8 Special examples and relationship between sequence and structure	269
<b>VI. Gas chromatography (GC)</b>	<b>280</b>
1 Principles and introductory remarks	280
2 Practical methods of procedure	282
3 Special examples	305
4 Correlation of retention time and chemical structure	310
