

CONTENTS

1. Basic Concepts	1
A. Classification of Lipids	1
B. Structure, Physical Properties and Functional Properties	4
C. Methods for Characterization and Functional Properties	5
D. A Model Lipid	6
2. Solid State Behaviour	7
A. Crystallization	7
B. General Packing Features of Lipids in Crystals	10
C. Polar Lipids	15
D. Non-Polar Lipids	19
E. Fat Crystallization	27
F. Gel Phases	41
3. Liquid Crystalline Lipid-water Phases	47
A. Structures	47
B. Phase Transitions and Phase Diagrams	55
C. Behaviour of Different Lipids	61
D. Binary and Ternary Phase Diagrams	69
E. Cholesterol and Ternary Phase Diagrams	74
4. The Liquid State	75
A. Oils – The Liquid State of Triglycerides	75
B. Liquid Phases of Simple Non-Polar Lipids Compared to Triglycerides	77
C. The L2-Phase and Polar Lipids in The Liquid State	77
D. Microemulsions	79
E. The L3-Phase	79
5. Monolayers In Surface Films, Bubbles and Foams	81
A. Formation of Monomolecular Surface Films at the Air/Water Interface	81
B. Bubbles and Foams	91
6. Lipid Interaction with Proteins and Other Polymers	97
A. Some new Aspects of Interfacial Properties of Proteins	97
B. Lipid-Protein Interaction in Colloidal Particles	98
C. Lipid-Protein Interaction in Monolayers	103
E. Lipid Interaction with Other Polymers	105

7.	Dispersions Of Lipid-Water Phases	107
	A. Dispersion of the L _x -Phase - Liposomes and Vesicles	107
	B. Dispersion of Reversed Hexagonal and of Cubic Phases - Cubosomes	109
	C. Dispersion of L2- and L3-Phases	111
	D. Aqueous Dispersions of Hydrophilic Lipid Crystals	112
8.	Emulsion Science and Technology	117
	A. Forces behind Emulsion Stabilization	117
	B. Oil-in-Water Emulsions	121
	C. Water-in-Oil-Emulsions	128
	D. Demulsification	129
	E. Fat Crystallization in Emulsions	130
	F. Emulsion Structure and Enzymatic Fat Digestion	131
9.	Lipids In Biomembranes-Drug Penetration through Membranes - Membrane Mimicking	133
	A. General Structural Features of Membranes	133
	B. Lipid Phase Properties and Membrane Functions	134
	C. Cubic Biomembrane Assemblies	134
	D. A Biomembrane Phase Transition Involving L _x and Cubic Bilayer Conformations	136
	E. Glycolipids in Recognition Phenomena	138
	F. Drug Penetration through Membranes	139
	G. Biomaterials Mimicking Membranes	140
10.	Lipids In Lubrication	143
	A. Lubrication	143
	B. Liquid - Crystalline Phases	144
	C. Crystalline Phases	145
	D. Grease and Plastic Fats	145
11.	Role Of Lipids in Human Skin - Skin Care Formulations and Drug Penetration	147
	A. Skin Lipids	147
	B. Skin Care Formulations	150
	C. Transdermal Penetration	152
12.	Polar Lipids in Gastrointestinal and Pulmonary Surface Layers and Administration of Exogenous Phospholipids	155
	A. Mucous Layers and Membrane Lipids	155
	B. Lipids in the Gastrointestinal Barrier	156
	C. The Peritoneal Mesothelium	162
	D. The Pulmonary Air/Water Interface	162

13. Drug Delivery	165
A. Liquid Lipid-Water Phases	165
B. Emulsions for Drug Delivery	167
C. The L _x -phase and Liposomes	168
D. H _{II} Phases, Cubic Phases and Cubosomes	171
E. Surface-Active Lipid Crystals	172
14. Lipid Functionality in Foods	173
A. Starch Modification by Interaction with Polar Lipids	173
B. Milk-Based Lipid Products and Their Analogues	180
C. Cocoa Butter and Chocolate	189
D. Vegetable Oils, Frying Oils and O/W-Emulsion Products	192
E. Lipids in Bread and Other Baked Products	194
F. Relation between Lipid Oxidation and Molecular Organization	199
G. Nutritional Aspects	201
H. Fat Replaces	204
I. Encapsulation of Lipids	205
15. Future Aspects of Functional Applications of Lipids	207
A. New Oilseed Crops	207
B. Oil Processing	208
C. Enzyme Technology	209
D. Biosurfactants	209
E. Technology Based on High Pressure and Supercritical Carbon Dioxide	211
