

CONTENTS

Preface		v
Chapter 1	Newer Methods for Fat Analysis in Foods	1
Chapter 2	Use of stable Isotopes to Study Incorporation Of Dietary Fat into Blood Lipids	34
Chapter 3	Qualitative and Quantitative Analysis of Triacylglycerols Using Atmospheric-Pressure Chemical Ionization Mass Spectrometry	45
Chapter 4	Liquid Chromatography with On-Line Electrospray Mass Spectrometry of Oxidized Diphenylphosphatidylglycerol	81
Chapter 5	Stereospecific Analysis of Docosahexaenoic Acid-Rich Triacylglycerols by Chiral-Phase HPLC With Online Electrospray Mass Spectrometry	100
Chapter 6	NMR Characterization of Fatty Compounds Obtained Via Selenium Dioxide-Based Oxidations	121
Chapter 7	Supercritical fluid Chromatography : A Shortcut in Lipid Analysis	139
Chapter 8	Analysis of Unusual Triglycerides and Lipids Using Supercritical Fluid Chromatography	163
Chapter 9	Oxidation Products of Conjugated Linoleic Acid and Furan Fatty Acids	183
Chapter 10	Analysis of Lipid Oxidation Products by Combination of Chromatographic Techniques	216
Chapter 11	Analysis of trans Fatty Acids	234
Chapter 12	Separation of Fatty Acid Methyl Esters and Triacylglycerols by Ag-HPLC : Silver-Ion and Normal-Phase Contributions to Retention	256
Chapter 13	Near Infrared Analysis of Oilseeds : Current Status and Future Directions	266
Chapter 14	Application of Fourier Transform Infrared Spectroscopy in Edible Oil Analysis	283
Chapter 15	Recent Applications of Iatroscan TLC-FID Methodology	325
Chapter 16	Natural Antioxidants in Lipids	

Chapter 17	Coffee Lipids : Analysis of the Diterpene 16- <i>O</i> -methylcafestol as an Indicator of Admixing of Coffees	356
Chapter 18	Improvements in Recovery of Petroleum Hydrocarbons from Marine Fish, Crabs and Mussels	380
Index		395
