

CONTENTS

1. Cycloaddition Reactions in Carbohydrate Chemistry : An Overview	1
2. Carbohydrate Dienophiles in [4 + 2] Cycloadditions	24
3. Pyranose-Derived Dienes and Conjugated Enals : Preparation And Diels-Alder Cycloaddition Reactions	33
4. Synthesis of β -Lactams from Unsaturated Sugars and Isocyanates	50
5. Diels-Alder Cycloaddition to Unsaturated Sugars : Stereocontrol as a Function of Structure and Stereochemistry	66
6. The [4 + 2] Cycloaddition of Azodicarboxylates and Cyclic Vinyl Ethers : Application to the Synthesis of Simple and Complex 2-Aminosaccharides	81
7. Glycosylmanganese Pentacarbonyl Complexes : An Organomanganese-Based Approach to the Synthesis Of C-Glycosyl Derivatives	97
8. Inter-and Intramolecular Diels-Alder Reactions of Sugar Derivatives	112
9. Carbohydrates as Chiral Templates in Stereoselective [4 + 2] Cycloaddition Reactions	131
10. Aqueous Cycloadditions Using Glycoorganic substrates : Stereo-and Physicochemical Aspects	147
11. Stereoselectivity of 1,3-Dipolar Cycloaddition of Glycosyl Nitrones to <i>N</i> -Arylmaleimides	158
