

## CONTENTS

<b>1 Synthesis and Secretion of Extracellular Enzymes in Bacteria</b>	<b>1</b>
1.1 Introduction	2
1.2 Localization of Enzymes	2
1.3 Regulation of Synthesis	4
1.4 Secretion	16
1.5 Conclusions	21
<b>2 Microbial Degradation of Starch</b>	<b>27</b>
2.1 Introduction	28
2.2 Substrate	28
2.3 Microbial Enzyme Action	29
2.4 Distribution and Properties of Microbial Enzymes	35
2.5 Industrial Application	47
2.6 Genetic Studies	47
<b>3 Degradation of Pectins</b>	<b>57</b>
3.1 Introduction	58
3.2 Chemical Constitution and Nomenclature of Pectic Substances	58
3.3 Enzymes Related to Degradation of Pectic Substances	58
3.4 Enzymatic Solubilization of Protopectin	59
<b>4 Degradation of Cellulose by Fungal Cellulose</b>	<b>83</b>
4.1 Ecology of Fungal Cellulose	84
4.2 Cellulose Structure	85
4.3 Applied Aspects of Cellulose Research	86
4.4 Production of Cellulose by Fungi	86
4.5 Purification of Fungal Cellulases	93
4.6 Properties and Mechanism of Action of Cellulose	104
4.7 Physiological Regulation of Cellulase Synthesis and Secretion	109
4.8 Molecular Architecture of Cellulase	116
4.9 Cellulase Genes	118

<b>5</b>	<b>Degradation of Cellulose and Hemicellulose by Rumen Microorganisms</b>	<b>127</b>
5.1	Introduction	128
5.2	Cellulose, Hemicellulose and Plant Cell Walls, Composition and Structure	128
5.3	Rumen Microorganisms Degrading Plant Cell Wall Polymers	131
5.4	Polysaccharidases of Rumen Microorganisms	140
5.5	Genetic Aspects of Fiber Digestion by Rumen Bacteria	145
5.6	Concluding Remarks	153
<b>6</b>	<b>Degradation of Lignin</b>	<b>161</b>
6.1	Introduction	162
6.2	Description of the Substrates (Occurrence and Properties)	162
6.3	Mechanism of Breakdown (Strategies, Enzymology, Conditions)	163
6.4	Overview and Lists of the Various Organisms and Enzymes	177
6.5	Applied Aspects (Fermentation, Industrial Aspects)	180
6.6	Genetic Approaches (Strain Improvements, Recombinant Techniques)	182
6.7	Conclusion	184
6.8	Abbreviations	185
<b>7</b>	<b>Fungal Metabolism of Aromatic Hydrocarbons</b>	<b>193</b>
7.1	General Introduction	194
7.2	Ecology of Hydrocarbon-Metabolizing Fungi	194
7.3	Enzymes Used in Aromatic Metabolism	195
7.4	Polycyclic Aromatic Hydrocarbons	195
7.5	Conclusions	212
<b>8</b>	<b>Anaerobic Degradation of Aromatic Compounds</b>	<b>219</b>
8.1	Introduction	220
8.2	From Biomass to Aromatic Monomers	221
8.3	Pathways of Anaerobic Degradation of Aromatic Compound	222
8.4	Organisms Known to Degrade Aromatic Compounds	232
8.5	Applied Aspects	236
8.6	Genetic Aspects	238
8.7	Concluding Remarks	238
<b>9</b>	<b>Degradation of Lipids by Bacterial Lipases</b>	<b>243</b>
9.1	Introduction	244
9.2	Staphylococcal Lipases	247
9.3	Pseudomonad Lipases	251
9.4	Other Bacterial Lipases	256
9.5	Lipase Assays	257
9.6	Applied Aspects	260
6.7	Concluding Remarks	263

<b>10 Degradation of Lipids by Fungi</b>	<b>267</b>
10.1 Introduction	268
10.2 Lipases of Oomycetales	271
10.3 Lipases of Mucorales and Kickxellales	271
10.4 Lipases of Entomophthorales	275
10.5 Lipases of Endomycetales	275
10.6 Lipases of Candidaceae	276
10.7 Lipases of Sporobolomycetales	280
10.8 Lipases of Helotiales and Phacidiales	280
10.9 Lipases of Eurotiales	280
10.10 Lipases of Sphaerials	280
10.11 Lipases of Dothideales	281
10.12 Lipases of Sphaeropsidales	281
10.13 Lipases of Melanconiales	281
10.14 Lipases of Basidiomycetes	281
10.15 Lipases of Moniliales	282
<b>11 Microbial Degradation of Proteins</b>	<b>293</b>
11.1 Introduction	294
11.2 Description of the Substrates	294
11.3 Mechanisms of Breakdown	294
11.4 Overview and Lists of the Various Organisms and Enzymes	295
11.5 Applied Aspects	351
11.6 Genetic Approaches	351
11.7 Concluding Remarks	354
<b>12 Degradation of Deoxyribonucleic Acids and Ribonucleic Acids</b>	<b>365</b>
12.1 Introduction	366
12.2 DNA Degrading Enzymes	367
12.3 RNA Degrading Enzymes	394
Index	411
