

## CONTENTS

<b>VI. PREPARATION OF CELLULOSE FROM ITS NATURAL SOURCES</b>	<b>511</b>
A. Wood Pulp (HOLZER)	511
1. General Considerations	513
2. Physical and Chemical Factors in Pulping	520
3. The Sulfito Process	524
4. The Kraft Soda Process	534
5. The Kraft (Sulfate) Process	537
6. Other Pulping Processes	545
7. Properties of Pulps and Their Constituenting Affecting End Use	547
B. Cotton Lint Linters (MARTIN)	550
1. Types of Cottonseed Fibers	550
2. Economics of Utilization of Cottonseed Fibers in the United States	553
3. Cottonseed Fibers in Other Countries	555
4. Linters Purification	556
5. Uses for Chemical Cotton	563
C. Rags (LEWIS)	566
D. Bast Fibers, Fibrovascular Elements, Cereal Straws, and Grasses (WELLS)	573
1. Bast Fibers	574
2. Cellulose Pulps from Bast Fibers	578
3. Fibrovascular Elements	580
4. Cereal Straws	581
5. Esparto Grass	584
6. Bamboo	585
7. Bagasse and Cornstalks	586
8. Value of Annual Plants	586
<b>VII. BLEACHING AND PURIFICATION OF WOOD CELLULOSE (HATCH)</b>	<b>589</b>
A. General Principles	589
B. Specific Bleaching Treatment	590
1. Chlorination	590
2. Alkaline Extraction	597
3. Hypochlorite Bleaching	597
4. Chlorine Dioxide and Sodium Chlorite	600
5. Peroxide Bleaching	602
6. The Washing Operation	603

C. Equipment for Commercial Chlorination, Bleaching and Alkaline Extraction	603
1. Chlorination Equipment	604
2. Bleaching Equipment	607
3. Alkaline Extraction Equipment	612
D. Quality Requirements for Specific Products	613
1. Nonpermanent Papers	613
2. Permanent Papers	613
3. Purified Pulp for Cellulose Derivatives	614
4. Groundwood and Semichemical Pulp	617
E. New Trends	617
1. Use of New Reagents	617
2. Continuous Versus Batch Processing	619
3. Chemical Control	619
<b>VIII. PROPERTIES AND TREATMENT OF PULP FOR PAPER (CLARK)</b>	<b>621</b>
A. Physical Properties of Paper Pulp	621
1. The Strength of Paper	623
2. Common Tests for Paper	625
3. Pulp Testing	626
B. Beating	633
1. Influence of Moisture on Pulp	634
2. Beating Equipment	635
3. The Action of Beating Equipment	638
4. Measurement of Beating	641
C. Theories of Beating	643
1. Chemical Theory of Beating	644
2. Physical Theory of Beating	645
3. Composite Theory of Beating	654
D. Results of Beating	657
1. Effects of Beating on the Fibers	657
2. Effects of Beating on the Pulp	658
3. Effects of Beating on the Paper	661
4. Factors Affecting the Rate of Beating	662
5. Phenomena Relation to Beating Pulp	663
E. Pulp Chemistry and Papermaking Properties	665
1. Degree of Polymerization	666
2. Hemicellulose Content	668
3. Lignin Content	670
4. Cooking Reactions	671

<b>IX. DERIVATIVES OF CELLULOSE</b>	<b>673</b>
A. Reactivity and Reactions of Cellulose (SPURLIN)	673
1. Uniformity of Substitution	674
2. Reaction of Cellulose Fibers	691
3. Chemical Factors Influencing Reactivity	702
4. Conclusion	712
B. Inorganic Esters (BARSHA)	713
1. Nitrocellulose	713
2. Cellulose Sulfate	755
3. Cellulose Phosphate	760
4. Cellulose Esters of Other Inorganic Acids	762
C. Organic Esters (MALM AND HIATT)	763
1. Aliphatic Fatty Acid Esters	766
2. Other Aliphatic Esters	809
3. Miscellaneous Esters	815
D. Alkali and Other Metal Derivatives (NICOLL, COX, AND CONAWAY)	825
1. Alkali Cellulose	825
2. Mercerization of Cellulose Textiles	863
3. Metal Alcholates of Cellulose	871
4. Cuprammonium-Cellulose Complexes	874
5. Cellulose-Organic Base Complexes	879
E. Ethers (SAVAGE, YOUNG, AND MAASBERG)	882
1. History	882
2. Chemistry of the Etherification Reaction	883
3. Properties of Cellulose Ethers	905
4. Ethyl Cellulose	913
5. Methyl Cellulose	930
6. Carboxymethyl Cellulose	937
7. Hydroxyethyl Cellulose	945
8. Benzyl Cellulose	949
9. Addition to Cellulose of Olefins Activated by Polar Substituent Groups	954
F. Xanthates (KLINE)	959
1. Preparation of Viscose	960
2. Mechanics of Cellulose Xanthate and Viscose Formations	975
3. Characteristics and Reactions of Viscose	987
G. Degradation of Cellulose Derivatives (MCBURNEY)	1019
1. Water-Soluble Cellulose Derivations	1020
2. Organosoluble Cellulose Derivatives	1026
