

## CONTENTS

<b>X. PHYSICAL PROPERTIES OF CELLULOSE AND ITS DERIVATIVES IN SOLUTION</b>	<b>1057</b>
A. Solubility (SPURLIN)	1057
1. General Aspects of Polymer Solubility	1057
2. Polymer Solubility as Liquid-Liquid Miscibility	1060
3. Flexibility of Polymer Molecules	1062
4. Crystallinity	1066
5. Solvation	1068
6. Nature of Specific Interaction	1069
7. Hydrogen Bonding	1073
8. Variation of Solubility with Substitution	1074
9. Water-Soluble Derivatives	1076
10. Solvents for Cellulose and Its Derivatives	1077
11. Abnormal Solubility Effects	1087
12. Evaluation of Solvent Power	1101
B. Thermodynamic Properties of Solutions of Long-Chain Compounds (HUGGINS)	1109
1. Some General Relationship	1110
2. Solutions of Long-Chain Compounds	1111
3. Osmotic Pressure	1115
4. Separation into Two Phases. Gels	1116
5. Summary	1121
C. Behavior of Cellulose Xanthate as a Polyelectrolyte (SWANSON)	1123
1. Viscosity Behavior of Polyelectrolytes	1124
2. The Polyelectrolyte Effect Cellulose Xanthate	1125
3. Change in Molecular Dimensions with Solvent	1127
4. Effect of Various Electrolytes	1128
5. Effect of Dielectric Constant of Solvent	1129
6. Effect in Concentrated Solutions	1130
D. Determination of Molecular Weight and Molecular-Weight Distribution (DOTY and SPURLIN)	1133
1. General Considerations	1134
2. Osmotic Pressure	1137
3. Sedimentation Equilibrium	1153
4. Sedimentation Rate and Diffusion	1154
5. Light Scattering	1158
6. Intrinsic Viscosity	1164
7. Fractionation and Distribution Curves	1173
8. Estimation of Polymolecularity	1185

E. Theory of the Viscosity of Dilute Solutions of Long-Chain Compounds (HUGGINS)	1189
1. Definitions	1190
2. Solutions of Spherical, Ellipsoidal, and Rodlike Molecules	1191
3. Solutions of Kinked-Chain Molecules	1193
4. Dependence of Viscosity Number on Concentration	1198
5. Summary	1202
F. Flow Properties (DAVIS and ELLIOTT)	1203
1. Practical Applications	1204
2. Rheological Fundamentals	1206
3. Solutions of Cellulose and Cellulose Derivatives	1211
4. Viscosity and Temperature	1227
5. Statistics of Viscosity Measurement	1227
6. Viscosity of Mixtures	1228
7. Measurement of Viscosity	1228
8. Commercial Utilization of Viscosity	1243
<b>XI. MECHANICAL PROPERTIES OF CELLULOSE AND ITS DERIVATIVES</b>	
<b>(WAKEHAM)</b>	<b>1247</b>
A. Mechanical Behavior of Cellulose Substances	1249
1. Properties in Static Stress (Creep)	1250
2. Properties in Static Strain (Stress Relaxation)	1254
3. Properties in Dynamic Stress and Strain	1256
4. Other Mechanical properties	1282
B. Molecular and Morphological Considerations of Extension	1288
1. General Features of the Molecular Basis for Mechanical Behavior	1288
2. Mechanisms of Cellulose Deformation	1292
3. Mechanisms of Delayed Elastic Recovery	1325
4. Significance of the Breaking Elastic Elongation	1326
C. Ultimate Strength	1327
1. Molecular Factors in Strength	1327
2. Influence of Order and Orientation on Tensile Strength of Fibers and Films	1334
3. Influence of Weal Spots	1336
4. External Factors and Treatments Affecting Strength	1345
5. The Fracture Process	1354
<b>XII. TESTS FOR CELLULOSE AND ITS DERIVATIVES</b>	<b>1357</b>
A. Cellulose Tests (MSRTIN)	1357
1. General Methods	1361
2. Raw Materials Tests	1373
3. Chemical Tests	1376
4. Physical Tests	1386

B. Cellulose Derivatives Tests	1393
1. Viscosity (KLUG)	1393
2. General Methods (GENUNG)	1396
Author Index, Part I-III	1485
Subject Index, Part I-III	1527
