

## CONTENTS

<b>1 Introduction</b>	<b>1</b>
1.1 General introduction	1
1.2 Definitions	2
1.3 Biosynthesis	4
1.4 Classes of aglycone	10
1.5 Nomenclature and stereochemistry	12
<b>2 Occurrence and distribution</b>	<b>18</b>
2.1 Triterpene saponins	19
2.2 Steroid saponins	76
2.3 Steroid alkaloid glycosides (glycoalkaloids, azasteroids)	96
2.4 Saponins from marine organisms	105
<b>3 Analysis and isolation</b>	<b>122</b>
3.1 Analysis and quantitative determination	122
3.2 Isolation	143
<b>4 Structure determination</b>	<b>175</b>
4.1 Cleavage reactions	177
4.2 Spectroscopic and other techniques for structure elucidation	197
<b>5 Triterpene saponins – pharmacological and biological properties</b>	<b>232</b>
5.1 General properties of saponins	232
5.2 Solubilizing properties	238
5.3 Biological and pharmacological activities of triterpene saponins	239
5.4 Pharmacokinetics and metabolism	283
5.5 Toxicity	284
<b>6 Steroid saponins and steroid alkaloid saponins: pharmacological and biological properties</b>	<b>287</b>
6.1 Biological and biological properties	288
6.2 Toxicity	304

<b>7</b>	<b>Commercially important preparations and products</b>	<b>307</b>
7.1	Sarsaparillae radix (sarsaparilla root)	310
7.2	Liquiritiae radix (glycyrrhiza, licorice root, licorice)	312
7.3	Hippocatani semen (aescine)	318
7.4	Hederae folium (ivy leaves)	321
7.5	Tea	322
7.6	Senegae radix (senega root)	323
7.7	Primulae radix (primula root)	323
7.8	Asiaticoside	324
7.9	Bupleuri radix	325
7.10	Gypsophila species	326
7.11	Quillaia bark	327
7.12	Ginseng	329
7.13	Eleutherococcus senticosus	337
	Appendices	342
	References	436
	Index of Latin names	539
	General index	54
