

CONTENTS

Part I Mono-, Di-, and Tri-saccharides and their Derivatives

1 Introduction	3
2 Free Sugars	5
3 Glycosides	12
4 Ethers and Anhydro-sugars	34
5 Acetals	44
6 Esters	52
7 Halogenated Sugars	83
8 Amino-sugars	87
9 Hydrazones, Osazones, and Formazans	101
10 Miscellaneous Nitrogen-containing Compounds	105
11 Thio-sugars	114
12 Derivatives with Sulphur, Selenium, or Nitrogen in the Sugar Ring	116
13 Deoxy-sugars	126
14 unsaturated Derivatives	126
15 Branched-chain Sugars	135
16 Alduloses and Diuloses	138
17 Sugar Acids and Lactones	142
18 Inorganic Derivatives	148
19 Cylitols	152
20 Antibiotics	162
21 Nucleosides	167
22 Oxidation and Reduction	172
23 N.m.r. Spectroscopy and Conformational Features of Carbohydrates	180
24 Other Physical Methods	186
25 Polarimetry	189
26 Separatory and Analytical Methods	191
27 Alditols	199

Part II Macromolecules

1 Introduction	203
2 General Methods	204
3 Plant Polysaccharides	209
4 Bacterial Polysaccharides	220
5 Glycoproteins and Glycopeptides	240
6 Carbohydrate Sulphates	254

7 Miscellaneous Polysaccharides	273
8 Chemical Synthesis and Modification of Polysaccharides	274
9 Physicochemical Studies	278
10 Glycolipids	280
Index of Authors	283
