

CONTENTS

Part I Mono-, Di-, and Tri-Saccharides and their Derivatives

1	Introduction	3
2	Free Sugars	4
3	Glycosides	10
4	Ethers and Anhydro-sugars	30
5	Acetals	39
6	Esters	44
7	Halogenated Sugars	75
8	Amino-sugars	80
9	Hydrazones, Osazones, and Formazane	94
10	Miscellaneous Nitrogen-containing Compounds	97
11	Thio-sugars	110
12	Derivatives with Sulphur or Nitrogen in the Sugar Ring	116
13	Deoxy-sugars	121
14	Unsaturated Derivatives	127
15	Branched-chain Sugars	138
16	Alduloses, Dialdoses, and Diuloses	147
17	Sugar Acids and Lactones	154
18	Inorganic Derivatives	160
19	Cyclitols	162
20	antibiotics	170
21	Nucleosides	181
22	Oxidation and Reduction	186
23	N.m.r. Spectroscopy and Conformational Features of Carbohydrates	189
24	Other Physical Methods	198
25	Polarimetry	203
26	Separatory and analytical Methods	206
27	Alditols	213

Part II Macromolecules

1	Introduction	217
2	General Methods	218
3	Plant Polysaccharides	223
4	Bacterial Polysaccharides	235
5	Glycoproteins and Glycopeptides	257
6	Acidic Glycosaminoglycans	227
7	Chemical Synthesis and Modification of Polysaccharides	290
8	Physicochemical Studies	292
9	Glycolipids	296
