

CONTENTS

Biomimetic Reactions Using Organized Polymeric Supports	1
Application of Thin-Film Biocatalysts to Organic Synthesis	15
Polymeric Biomimetic Catalysts Based on 4-Dialylaminopyridine	39
Synthesis of Platinum and Titanium Poly (Amino Acids)	71
Zeolites as Inorganic Analogs of Biopolymers	81
Catalytic Antibodies	95
Generation of Catalytic Activity by Protein Modification	115
Heparin Heparinoids and Heparin Oligosaccharides: Structure and Biological Activities	135
An Immobilized Protamine System for Removing Heparin in Extracorporeal Blood Circulation	175
Poly (Vinyl Alcohol) –Polyelectrolyte Blended Membranes-Blood Compatibility and Permeability Properties	191
Condensation of Bioactive Compounds into the Membrane Compartment by Conjugation with Synthetic Polypeptides	203
Polyphosphates Mimicing Structures and Functions of Teichoic Acids	22
Polyphosphates Modeling Elements of Nucleic Acids Structure	243
Nucleic Acid Analogs: Their Specific Interaction and Applicability	253
Potential Medical Applications of Nucleic Acid Analog Polymers	269
Growth Rate Increase in Normal Wistar Rats Catalyzed by Insulin	277
Contributors	289
Index	289
