547.7 REI

CONTENTS

A Brief History of the Photochemistry of Macromolecules 1

Physical and Environmental Factors Influencing the Photochemistry of DNA 15

The Photochemical Addition of Amino Acids and Proteins to Nucleic Acids 31

Energy Transfer in Polymeric Ketones in the solid Phase 39

Fluorescence Polarization Kinetic Measurements of Antigen-Antibody Reactions 47

The Dye-Sensitized Photooxidation of Biological Macromolecules 67

Photolytic Oxidation of Isotactic Polystyrene in Presence of Sulfur Dioxide. Part I - Chain Scission as Function of Temperature at Constant Oxygen and Sulfur Dioxide Pressures and Constant Light Intensity 85

Photolytic Oxidation of Isotactic Polystyrene in Presence of Sulfur Dioxide. Part II - Photolysis Reaction as Function of Light Intensity, Sulfur Dioxide, and Oxygen Pressures 91

Fluorescence Properties of Visual Pigments 105

Surface-Photopolymerization of Maleimides 117

The Effect of Solution Components on Polyacrylamide Gel Formation Via Riboflavin-Sensitized Photopolymerization 129

Polyperfluorobutadiene. V. Photopolymerization of Perfluorobutaiene 135

Light Scattering Spectroscopy as a Tool for Studying Macromolecular Dynamics and Chemical Kinetics 145

Hypochromism in Dimers 163

Quantum Mechanically Based Rules for Thermal and Photochemical Reactions 167

Photoelimination Reactions of Macromolecules 185
