Vol. 1. Structure and Properties

Contents of Volume 2
Notation

xxxix

Part I. Structure

<i>Chapter 1. Introduction</i>	3
1.1. Micro- and Macromolecular Chemistry ..	3
1.2. The Molecular Concept	12
1.3. Historical Development	15
1.4. Nomenclature	24
1.5. Commercial Classification and Significance	28
Literature	32
<i>Chapter 2. Constitution</i>	37
2.1. The Concept of Structure	37
2.2. Atomic Structure and Polymer Chain Bonds	38
2.2.1. Isochains	39
2.2.2. Heterochains	42
2.3. Monomeric Unit Bonding	47
2.3.1. Unipolymers	47
2.3.2. Copolymers	50
2.3.2.1. Composition	51

2.3.2.2. Constitutional Heterogeneity	52
2.3.2.3. Sequence	58
2.3.3. Substituents	62
2.3.4. End Groups	63
2.4. Bonding in Individual Chains	64
2.4.1. Branching	64
2.4.2. Irregular Cross-Linked Structures	66
2.4.3. Ordered Networks	69
Literature	72
<i>Chapter 3. Configuration</i>	75
3.1. Ideal Structures	75
3.1.1. Central Carbon Atom Asymmetry	75
3.1.2. Tacticity	78
3.1.3. Projections	80
3.1.4. Monotactic Polymers	81
3.1.5. Ditactic Polymers	82
3.2. Real Structures	84
3.2.1. <i>J</i> -ads	84
3.2.2. Sequence Length	86
3.3. Experimental Methods	87
3.3.1. X-Ray Crystallography	87
3.3.2. Nuclear Magnetic Resonance Spectroscopy	87
3.3.3. Infrared Spectroscopy	90
3.3.4. Other Methods	90
Literature	91
<i>Chapter 4. Conformation</i>	93
4.1. Conformation of Single Molecules	93
4.1.1. The Concept of Conformation	93
4.1.2. Conformational Types	97
4.1.3. Conformational Analysis	99
4.1.4. Constitutional Influence	100
4.2. Conformation in the Crystal	102
4.3. Microconformation in Solution	108
4.3.1. Low-Molecular-Weight Compounds	108
4.3.2. Macromolecular Compounds	110
4.4. Ideal Coil Molecules in Solution	112
4.4.1. Phenomena	112

4.4.2.	Chain End-to-End Distance and Radii of Gyration . . .	114
4.4.2.1.	The Random-Flight Model	114
4.4.2.2.	Chains with Constant Valence Angle	115
4.4.2.3.	Constant Valence Angle Chains with Hindered Rotation	115
4.4.2.4.	Radius of Gyration	116
4.4.2.5.	The Shape of Unperturbed Coils	117
4.4.3.	Steric Hindrance Parameter and Constitution	117
4.4.4.	The Characteristic Ratio	119
4.4.5.	Statistical Chain Element	120
4.4.6.	Wormlike Chain	121
4.5.	Excluded Volume	123
4.5.1.	Rigid Particles	123
4.5.2.	Unbranched Macromolecules	124
4.5.2.1.	Basic Principles	124
4.5.2.2.	Cluster Integrals	126
4.5.2.3.	Molecular-Weight Dependence of Coil Dimensions	127
4.5.2.4.	Concentration and Temperature Dependence of Coil Dimensions	130
4.5.3.	Branched Macromolecules	131
4.6.	Compact Molecules	131
4.6.1.	Helices	131
4.6.2.	Ellipsoids and Spheres	132
4.7.	Optical Activity	133
4.7.1.	Basic Principles	133
4.7.2.	Structural Effects	135
4.7.2.1.	General Considerations	135
4.7.2.2.	Poly(α -olefins)	137
4.7.2.3.	Poly(α -amino acids)	140
4.7.2.4.	Proteins	141
4.8.	Conformational Transitions	142
4.8.1.	Thermodynamics	142
4.8.2.	Kinetics	145
A4.	Appendix to Chapter 4	146
A4.1.	Calculation of the Chain End-to-End Distance	146
A4.2.	Relationship between the Radius of Gyration and the Chain End-to-End Distance for the Segment Model	147
A4.3.	Calculation of the Chain End-to-End Distance for Valence Angle Chains	149
A4.4.	Distribution of Chain End-to-End Distances	151
	Literature	152

<i>Chapter 5. Supermolecular Structures</i>	155
5.1. Phenomena	155
5.2. Crystallinity Determination	158
5.2.1. X-Ray Crystallography	158
5.2.2. Density Measurements	163
5.2.3. Calorimetry	165
5.2.4. Infrared Spectroscopy	165
5.2.5. Indirect Methods	166
5.3. Crystal Structure	167
5.3.1. Molecular Crystals	167
5.3.2. Elementary and Unit Cells	167
5.3.3. Polymorphism	171
5.3.4. Isomorphism	172
5.3.5. Lattice Defects	172
5.4. Morphology of Crystalline Polymers	174
5.4.1. Fringed Micelles	174
5.4.2. Polymer Single Crystals	176
5.4.3. Spherulites	182
5.4.4. Dendrites and Epitaxial Growth	184
5.5. The Amorphous State	186
5.5.1. Free Volumes	186
5.5.2. Morphology	188
5.5.3. Polymer Alloys	190
5.5.4. Block Copolymers	190
5.6. Orientation	191
5.6.1. Definition	191
5.6.2. X-Ray Diffraction	193
5.6.3. Optical Birefringence	194
5.6.4. Infrared Dichroism	195
5.6.5. Polarized Fluorescence	195
5.6.6. Sound Propagation	196
Literature	197

Part II. Solution Properties

<i>Chapter 6. Solution Thermodynamics</i>	203
6.1. Basic Principles	203
6.2. Solubility Parameter	205
6.2.1. Basic Principles	205

6.2.2. Experimental Determination	207
6.2.3. Applications	209
6.3. Statistical Thermodynamics	211
6.3.1. Entropy of Mixing	211
6.3.2. Enthalpy of Mixing	212
6.3.3. Gibbs Energy of Mixing for Nonelectrolytes	213
6.3.4. Gibbs Energy of Mixing for Polyelectrolytes	215
6.3.5. Chemical Potential of Concentrated Solutions ..	215
6.3.6. Chemical Potential of Dilute Solutions	217
6.4. Virial Coefficients	218
6.4.1. Definitions	218
6.4.2. Excluded Volume	219
6.5. Association	222
6.5.1. Basic Principles	222
6.5.2. Open Association	224
6.5.3. Closed Association	227
6.5.4. Concentrated Solutions and Melts	229
6.6. Phase Separation	230
6.6.1. Basic Principles	230
6.6.2. Upper and Lower Critical Solution Temperatures	231
6.6.3. Quasibinary Systems	233
6.6.4. Fractionation and Microencapsulation	237
6.6.5. Determination of Theta States	238
6.6.6. Incompatibility	241
6.6.7. Swelling	242
6.6.8. Crystalline Polymers	244
Literature	246

Chapter 7. Transport Phenomena

7.1. Effective Quantities	249
7.2. Diffusion in Dilute Solution	250
7.2.1. Basic Principles	250
7.2.2. Experimental Methods	253
7.2.3. Molecular Quantities	255
7.3. Permeation through Solids	256
7.3.1. Basic Principles	256
7.3.2. Experimental Methods	257
7.3.3. Constitutional Influence	258
7.4. Rotational Diffusion and Streaming Birefringence	260
7.5. Electrophoresis	261
7.6. Viscosity	263

7.6.1. Concepts	263
7.6.2. Methods	266
7.6.3. Flow Curves	270
7.6.4. Viscosities of Melts	271
7.6.5. Viscosity of Concentrated Solutions	275
Literature	275

<i>Chapter 8. Molecular Weights and Molecular-Weight Distributions</i>	277
8.1. Introduction	277
8.2. Statistical Weights	278
8.3. Molecular-Weight Distributions	280
8.3.1. Representation of the Distribution Functions ..	280
8.3.2. Types of Distribution Functions	282
8.3.2.1. Gaussian Distribution	282
8.3.2.2. Logarithmic Normal Distribution	284
8.3.2.3. Poisson Distribution	286
8.3.2.4. Schulz-Flory Distribution	287
8.3.2.5. Tung Distribution	288
8.4. Moments	288
8.5. Averages	289
8.5.1. General Relationships	289
8.5.2. Simple One-Moment Averages	290
8.5.3. One-Moment Exponent Averages	291
8.5.4. Multimoment Averages	291
8.5.5. Polydispersity Parameters	294
Literature	295

<i>Chapter 9. Determination of Molecular Weight and Molecular-Weight Distribution</i> ..	297
9.1. Introduction and Survey	297
9.2. Membrane Osmometry	299
9.2.1. Semipermeable Membranes	299
9.2.2. Experimental Methods	301
9.2.3. Nonsemipermeable or Leaky Membranes	304
9.3. Ebulliometry and Cryoscopy	307
9.4. Vapor-Phase Osmometry	308
9.5. Light Scattering	309
9.5.1. Basic Principles	309
9.5.2. Small Particles	310

9.5.3. Copolymers	314
9.5.4. Concentration Dependence	317
9.5.5. Large Particles	320
9.5.6. Experimental Procedure	324
9.6. Small-Angle X-Ray and Neutron Scattering	325
9.7. Ultracentrifugation	326
9.7.1. Phenomena and Methods	326
9.7.2. Basic Equations	329
9.7.3. Sedimentation Velocity	330
9.7.4. Equilibrium Sedimentation	333
9.7.5. Sedimentation Equilibrium in a Density Gradient	334
9.7.6. Preparative Ultracentrifugation	337
9.8. Chromatography	338
9.8.1. Elution Chromatography	338
9.8.2. Gel-Permeation Chromatography	338
9.8.3. Adsorption Chromatography	342
9.9. Viscometry	343
9.9.1. Basic Principles	343
9.9.2. Experimental Methods	345
9.9.3. Concentration Dependence for Nonelectrolytes ..	350
9.9.4. Concentration Dependence for Polyelectrolytes ..	352
9.9.5. The Staudinger Index and the Molecular Weight of Rigid Molecules	354
9.9.6. The Molecular Weight and Staudinger Index of Coil-like Molecules	357
9.9.7. Calibration of the Viscosity-Molecular Weight Relationship	362
9.9.8. Influence of the Chemical Structure on the Staudinger Index	364
9.9.9. Temperature Dependence of the Staudinger Indices	366
Literature	367

Part III. Solid-State Properties

<i>Chapter 10. Thermal Transitions</i>	<i>373</i>
10.1. Basic Principles	373
10.1.1. Phenomena	373
10.1.2. Thermodynamics	374
10.2. Special Parameters and Methods ..	378
10.2.1. Expansion	378

10.2.2.	Heat Capacity	380
10.2.3.	Differential Thermal Analysis	381
10.2.4.	Nuclear Magnetic Resonance	383
10.2.5.	Dynamic Methods	384
10.2.6.	Industrial Testing Methods	384
10.3.	Crystallization	386
10.3.1.	Morphology	386
10.3.2.	Formation of Nuclei	387
10.3.3.	Crystal Growth or Crystallization	390
10.3.4.	The Influence of Additives	395
10.3.5.	Recrystallization	395
10.4.	Melting	396
10.4.1.	Melt Processes	396
10.4.2.	Melting Temperature and Molecular Weight	399
10.4.3.	Melting Point and Constitution	400
10.4.4.	Melting Point of Copolymers	405
10.5.	Glass Transitions	405
10.5.1.	Phenomena	405
10.5.2.	Static and Dynamic Glass-Transition Temperatures	406
10.5.3.	Glass-Transition Temperature and Constitution ..	408
10.5.4.	Glass-Transition Temperature and Configuration	410
10.5.5.	Glass-Transition Temperature of Copolymers ..	410
10.5.6.	Plasticizers	412
10.6.	Other Transitions	414
10.7.	Thermal Conductivity	416
	Literature	417
 <i>Chapter 11. Mechanical Properties</i>		 421
11.1.	Phenomena	421
11.2.	Energy-Elasticity	424
11.2.1.	Basic Parameters	424
11.2.2.	Structural Influences	425
11.3.	Entropy-Elasticity	427
11.3.1.	Phenomena	427
11.3.2.	Phenomenological Thermodynamics	431
11.3.3.	Statistical Thermodynamics	433
11.3.4.	Elastoosmometry	437
11.4.	Viscoelasticity	438
11.4.1.	Basic Principles	438

11.4.2. Relaxation Processes	440
11.4.3. Retardation Processes	441
11.4.4. Combined Processes	442
11.4.5. Dynamic Loading	443
11.5. Deformation Processes	444
11.5.1. Tensile Tests	444
11.5.2. Necking	447
11.5.3. Hardness	450
11.6. Fracture	451
11.6.1. Concepts and Methods . .	451
11.6.2. Theory of Brittle Fracture	452
11.6.3. Impact Strength	455
11.6.4. Reinforcement	457
11.6.5. Plasticization	458
11.6.6. Stress Cracking	459
11.6.7. Durability	459
Literature	461

Chapter 12. Compounding and Processing of Plastics 463

12.1. Compounding	463
12.1.1. General	463
12.1.2. Fillers	464
12.1.3. Dyes and Pigments	466
12.1.4. Plasticizers	468
12.1.5. Release Agents, Lubricants, Stabilizers, and Antistatics	468
12.2. Processing of Thermoplasts, Thermosets, and Elastomers	469
12.2.1. Classification	469
12.2.2. Processing via the Viscous State	470
12.2.3. Processing via the Elastoviscous State	472
12.2.4. Processing via the Elastoplastic State	475
12.2.5. Processing via the Viscoelastic State	477
12.2.6. Processing via the Solid State	478
12.3. Fiber Processing	479
12.3.1. Introduction	479
12.3.2. Fiber Formation	481
12.3.3. Spinning Techniques	482
12.3.4. Spin Processes	484
12.3.5. Drawing	486
12.3.6. Fiber Properties	487

12.4. Finishing (Surface Treatment)	491
12.4.1. Metallizing	491
12.4.2. Glass Coating	491
Literature	107
<i>Chapter 13. Interfacial Phenomena</i>	495
13.1. Spreading	495
13.2. Interfacial Tensions	496
13.2.1. Surface Tension of Liquid Polymers ..	496
13.2.2. Interfacial Tension of Solid Polymers	498
13.2.2.1. Basic Principles	498
13.2.2.2. Critical Surface Tension	499
13.3. Adsorption of Polymers	501
13.4. Adhesives and Glues	503
13.4.1. Adhesion	503
13.4.2. Gluing	505
Literature	507
<i>Chapter 14. Electrical Properties</i>	509
14.1. Dielectric Properties	509
14.1.1. Polarizability	510
14.1.2. Behavior in an Alternating Electric Field	510
14.1.3. Dielectric Field Strength	512
14.1.4. Tracking	513
14.1.5. Electrostatic Charging	513
14.1.6. Electrets	515
14.2. Electronic Conductivity	516
14.2.1. Influence of Chemical Structure	516
14.2.2. Measuring Techniques	520
Literature	521
<i>Chapter 15. Optical Properties</i> ..	523
15.1. Light Refraction	523
15.2. Light Interference and Color	525
15.2.1. Basic Principles ...	525
15.2.2. Iridescent Colors ...	526

15.3. Light Transmission and Reflection	527
15.3.1. Total Reflection	527
15.3.2. Transparency	528
15.3.3. Gloss	529
15.4. Light Scattering	530
15.4.1. Phenomena	530
15.4.2. Opacity	531
Literature	532
