

CONTENTS 547-84 HAM

I. Theory of Copolymerization (George E. Ham)	1
I. Historical Development	
II. The Copolymerization Equation	
III. Sequence Distribution in Copolymerization	
IV. Penultimate Effects in Copolymerization	
V. Effects of Remote Units	
VI. Progression of Probabilities	
VII. Proof of Validity of Expanded Copolymerization Equations	
VIII. Stereoregular Polymerizations	27
IX. Methods of Determining r_1 and r_2 Values	29
X. Multicomponent Polymerizations	30
XI. Introduction to General Relationships among Monomers in Copolymerization	
XII. Generality of Product Probability Values in Unifying and Predicting Relationships Among Monomers in Copolymerization	51
1. Styrene-Acrylonitrile-Acrylic Acid	54
2. Styrene-Methyl Acrylate-Acrylonitrile	55
3. Methyl Methacrylate-Methyl Acrylate-Vinyl Acetate	56
4. Styrene-Methyl Acrylate-Vinyl Chloride	57
5. Methyl Methacrylate-Methyl Acrylate-Vinyl Chloride	57
6. Acrylonitrile-Methyl Acrylate-Vinyl Chloride	58
7. Vinyl Chloride-Vinyl Acetate-Acrylonitrile	60
8. Vinyl Chloride-Vinyl Acetate-Methyl Acrylate	61
9. Vinyl Acetate-Vinyl Benzoate-N-Vinylpyrrolidone	62
10. Vinyl Chloride-Vinyl Acetate-Vinylene Carbonate	63
References	64
II. The Q-e Scheme (T. Alfrey, Jr., and L. J. Young)	
I. Introduction	67
II. Application to 1,1-Disubstituted Ethylenes	73
III. Application to 1,2-Disubstituted Ethylenes	75
IV. Miscellaneous Observations Concerning Q and e Values of Various Monomers	79
V. Extensions of the Q - e Scheme	81
VI. Theoretical Treatments of Monomer Reactivities	84
References	86

CONTENTS

III. Olefin Copolymerization with Supported Metal Oxide Catalysts (J. Paul Hogan)	89
I. Introduction	89
II. The Catalysts	90
III. Catalyst Poisoning	92
IV. The Polymerization Processes	
1. Two Variations	93
2. Solution Process	95
3. Slurry Processes	96
V. Copolymerization of C ₃ -C ₆ α -Olefins with Ethylene	96
1. Relative Reactivity of Ethylene and Comonomer	98
2. Control of Density and Melt Index	99
VI. Ethylene Polymerization with Dual-Promoted Catalyst	101
VII. Structures of Copolymers	101
1. Unsaturation and Chain Configuration	103
2. Crystallinity and Density	106
VIII. Copolymer Properties	106
1. Density Dependent Properties	109
2. Melt Index Dependent Properties	109
3. Molecular Weight Distribution	110
IX. Commercial Application	111
References	115
IVA. Copolymers of α-Olefins (C. A. Lukach and H. M. Spurlin)	115
I. Copolymers of Ethylene and Propylene	115
1. Criteria for Preparing Uniform Copolymers	123
2. Preparation of Copolymers	126
3. Copolymerization Reactivity Ratios	128
4. Copolymerization Kinetics	135
5. Copolymer Composition Distribution	138
6. Copolymer Molecular Weight Distribution	138
7. Copolymer Microstructure	139
8. Physical Properties of Ethylene-Propylene Copolymers	139
II. Copolymers of Other Monoolefins	
III. Summary	
References	
IVB. Block Copolymers with Ethylene as One of the Components (G. Bier and G. Lehmann)	149
Introduction	149
1. Definition	150
2. Structures of Block Copolymers	153
3. Special Prerequisites for the Formation of Block Copolymers	154
4. Initiation and Mechanisms in General	154

II. Special Processes	159
1. Block Copolymerization with Organo-Metallic Mixed Catalysts	162
2. Lithium Process	195
3. Mechano-Chemical Syntheses	195
4. Diazo Method	197
III. Analytical Methods	197
IV. Properties and Application	211
References	229
IVC. Ethylene-Propylene Copolymers as Rubbers (Giovanni Crespi, Alberto Valvassori, and Guido Sartori)	231
I. Constitution of the Ethylene-Propylene Copolymerization Products	231
1. Criteria Adopted for the Determination of the Constitution of the Ethylene-Propylene Copolymers	231
2. Determination of the Composition of the Ethylene-Propylene Copolymers	234
3. Distribution of the Monomeric Units in the Ethylene-Propylene Copolymers	236
II. Synthesis of the Ethylene-Propylene Copolymers	240
1. Influence of the Operating Conditions on the Copolymer Composition	240
2. Influence of the Operating Conditions on the Intrinsic Viscosity of Ethylene-Propylene Copolymers	243
3. Reactivity Ratios in the Ethylene-Propylene Copolymerization	245
4. Kinetics of the Ethylene-Propylene Copolymerization in the Presence of Catalytic System $VCl_4-Al(C_6H_{13})_3$	247
5. Ethylene-Propylene Copolymerization Rate in the Presence of Different Catalytic Systems	249
III. Crosslinking of Chlorosulfonated Ethylene-Propylene Copolymers	251
IV. Crosslinking with Radicalic Initiators and Unsaturated Acid Compounds	254
V. Crosslinking of Chlorinated Ethylene-Propylene Copolymers	260
VI. Crosslinking of the Ethylene-Propylene Copolymers Containing Unsaturation	264
References	273
IVD. Other α-Olefin Copolymers (Giovanni Crespi, Alberto Valvassori, and Guido Sartori)	
Ethylene-Butene-1 Copolymers	275
II. Reactivity Ratios for Propylene-Butene-1 Copolymerization	276
III. Ethylene-Propylene-Butene-1 Terpolymers	279
1. Synthesis	279

2. Properties of Ethylene-Propylene-Butene-1 Terpolymers . . .	281
References	282
V. Cationic Copolymerizations (Joseph P. Kennedy).	283
I. Scope	283
II. Introduction to Cationic Polymerizations	283
1. Catalysts	284
2. Monomers	285
3. Mechanisms	285
III. Cationic Copolymerizations	290
IV. Reactivity in Cationic Copolymerizations	295
1. Compilation of Comonomer Pairs and Reactivity Ratios.	295
2. Relative Reactivities	295
3. Steric Effects	310
V. The Effect of Reaction Conditions and the Gegenion on Reactivity Ratios and Molecular Weights	311
1. The Effect of Dielectric Constant	311
2. The Effect of Temperature	317
3. The Effect of Gegenion	320
VI. Cationic Copolymerization by Irradiation	323
VII. Cationic Graft Polymerizations	323
VIII. Butyl Rubber	324
1. The History of Butyl	325
2. Butyl Manufacturing Process	326
3. Properties of Butyl	328
References	330
VI. Block and Graft Copolymerizations (Allan S. Hoffmann and Robert Bacskai).	335
I. Introduction	335
II. Characterization and Properties.	336
1. Separation and Analysis	336
2. Solution Properties	339
3. Bulk Properties.	341
III. Synthetic Methods	349
1. Radical Attack on Macromolecules	349
2. Macromolecular Free-Radical Initiators	359
3. Photochemical Syntheses	372
4. Radiation Syntheses.	375
5. Mechanochemical Syntheses	388
6. Ionic Syntheses.	392
7. Condensation and Ring Opening Reactions	401
References	409
VII. Anionic Copolymerizations (Maurice Morton)	421
I. Introduction	421

II. Early Work	422
III. Recent Studies	424
IV. Absolute Copolymerization Rate Constants	434
References	435
VIII. Copolymerizations Involving Styrene or Substituted Styrenes as Principal Components (Lewis J. Young)	437
I. Reactivity	437
1. Reactivity Ratios	438
2. Radical Affinities	439
II. Copolymerization of Styrene with Other Monomer Types	441
1. Vinyl-to-Carbon Monomers	441
2. Vinyl-to-Noncarbon Monomers	462
3. Nonvinyl Monomers	472
III. Copolymerization of Substituted Styrenes	475
1. Alkyl-Substituted Styrenes	475
2. Halogen-Substituted Styrenes	484
3. Aryl-Substituted Styrenes	488
4. Other Substituted Styrenes	500
IV. Styrene-Like Monomers	509
1. Vinylpyridines	510
2. Vinylthiophenes	511
3. Vinylfurans	511
V. Terpolymers	511
References	516
IX. Copolymerizations Involving Acrylonitrile as a Principal Component (Leighton H. Peebles, Jr.)	525
-I. Introduction	525
II. The Solid-State Structure of Polyacrylonitrile	527
III. Mechanism of Polymerization of Acrylonitrile	536
1. Introduction	536
2. General Kinetics of Polymerization	538
3. Solution Polymerization of Acrylonitrile	540
4. Occurrence of Buried Radicals	543
5. Definition of the Three Loci of Polymerization	546
6. Examination of the Absolute Rate Constants	547
7. Polymerization with Precipitation	548
8. Influence of Surface Polymerization upon the Overall Polymerization	551
9. Nonfree-Radical Means of Initiating Polymerization	553
10. Types of Commercial Polymerization Procedures	555
IV. Copolymerization of Acrylonitrile	557
1. Introduction	557
2. Review of Copolymerization	557

3. Ionic Initiation	559
4. Free-Radical Initiation	562
5. Effects of Temperature, Pressure, and Length of Side Chain	563
6. Influence of Diluent	564
7. Graft and Block Copolymerization	573
8. Special Monomers	574
Some Properties of Acrylonitrile Copolymers	575
References	580
X. Copolymerizations Employing Vinyl Chloride or Vinylidene Chloride as Principal Components (James F. Gabbett and W. Mayo Smith)	587
I. Copolymers Predominantly Vinyl Chloride	587
II. Copolymers of Vinyl Chloride and Vinyl Acetate	587
1. Preparation	588
III. Copolymer Composition	591
1. Physical Properties	594
2. Applications	595
IV. Copolymers of Vinyl Chloride and Acrylonitrile	601
1. Copolymerization	601
2. Preparation	602
V. Copolymers of Vinyl Chloride and Vinylidene Chloride	603
VI. Other Copolymers Predominantly Vinyl Chloride	603
VII. Copolymers Predominantly Vinylidene Chloride	609
VIII. Copolymers of Vinylidene Chloride and Vinyl Chloride	609
1. Preparation	609
2. Suspension Polymerization	609
3. Emulsion Polymerization	610
4. Physical Characteristics	611
5. Heat Stability	615
6. Processing	616
7. Applications	618
IX. Copolymers of Vinylidene Chloride and Acrylonitrile. Protective Coatings	620
X. Markets for Vinylidene Chloride Copolymers	621
XI. Other Copolymers Predominantly Vinylidene Chloride	625
References	626
XI Quantitative Aspects of High Pressure Copolymerizations Involving Ethylene as a Principal Component (N. L. Zutty and R. D. Burkhart)	639
I. The Effect of Pressure on Monomer Reactivity Ratios	639
II. The High Pressure Copolymerization of Ethylene	641
III. Q - and e -Values for Ethylene Based on Styrene ($Q = 1.0$, $e = -0.8$)	645
IV. Q - and e -Values Based on Ethylene as the Reference Monomer	646
V. Physical Properties of Ethylene Copolymers	649
References	652

CONTENTS

XII. Copolymerizations Involving Acrylates and Methacrylates as Principal Components (Leo S. Luskin)	653
I. Mechanism of Copolymerization	653
1. Effect of Reaction Conditions on Relative Reactivities of Monomers	654
2. Overall Initial Rates of Copolymerization	655
3. Effects of High-Energy Radiation in Copolymerization	658
II. Characterization of Acrylic Copolymers	660
1. Gross Composition	660
2. Light Scattering	662
3. Polarization and Nuclear Magnetic Resonance Measurements	663
4. Cyclization Reactions	664
5. Glass Temperatures	666
6. Minimum Filmforming Temperature	668
III. Preparation and Properties of Acrylic Copolymers	671
1. Thermoplastic All-Acrylic Copolymers	671
2. Thermosetting Acrylic Copolymers	674
3. Acrylonitrile	675
4. Olefins	677
5. Butadiene and Isoprene	678
6. Styrene	679
7. α -Methylstyrene	681
8. Vinylidene Chloride	682
9. Vinyl Chloride	682
10. Vinyl Acetate	683
References	684
Appendix A. Copolymerization Reactivity Ratios (Herman Mark, B. Immergut, E. H. Immergut, L. J. Young, and K. I. Beynon)	
Appendix B. Tabulation of $Q-e$ Values (Lewis J. Young)	845
