

CONTENTS

I. Introduction	
High-Temperature Polycondensation Methods	1
Low-Temperature Methods of Polycondensation	7
Comparison of Low- and High-Temperature Polycondensation Methods	11
Applications of the Low-Temperature Methods	13
Fundamental Areas in Need of Study	14
References	14
II. Interfacial Polycondensation in Unstirred Systems	19
Introduction	19
Mechanism and Variables	20
Chemistry	20
Polymer Formation	21
Time as a Polymerization Factor	21
Location of the Polycondensation	22
Interface Function	24
Amine Acylation	25
Acid Elimination	27
Acid Chloride Hydrolysis	29
Precipitation of Polymer	30
Optimum Polymerization Conditions for 6-10 Polyamide	30
Concentration Ratios	30
Concentration Level	33
Effects of Polymer-Solvent Interaction	33
Phase Miscibility	35
Nonaqueous Two-Phase Systems	36
Surface-Active Agents and Salts	37
Variations in Phase Dimensions and Rate of Film Withdrawal	40
Polymer Yield	43
Optimum Polymerization Conditions for Some Other Polyamides	46
Polycondensations Other Than Polyamidation	48
Applications	49
Polymer Preparation	49
Film Formation and Properties	50
Fiber Spinning	54
Fibrous Particles	61
Coatings	61
References	63
III. Interfacial Polycondensation in Stirred Systems	65
Introduction	65

Major Variables	66
Reaction Rate	66
Temperature	67
Stirring and Concentration Effects	67
Case 1 in Which the Polymer Precipitates Rapidly	68
Case 2 in Which the Polymer Precipitates Rapidly in a Nonswollen State	75
Case 3 in Which the Polymer Remains in Solution	76
Method of Reactant Addition	80
Variation of Acid Acceptors	80
Reactant Equivalence	83
Hydrolysis of Acid Halides	86
Linear and Cyclic Oligomers	89
Effect of Impurities and Additives	90
Polymerization Rates and Relative Reactivities of Intermediates	95
Special Process Conditions	99
Partial Phase Miscibility	99
Nonaqueous Two-Phase Polymerization Systems	101
Water-Insoluble Reactants	103
Polycondensation without Organic Solvents	103
Continuous Polycondensation Equipment	106
Applications	110
General Polymer Preparation	110
Direct Preparation of Solutions and Emulsions	111
Block and Ordered Polymers	111
Polymer Derivatives and Graft Polymers	112
References	113
IV. The Low-Temperature Solution Polycondensation Process	115
Introduction	115
Chemistry of the Polycondensation Reactions	115
Outline of Major Variables	117
Preparation of Polyamides from Piperazines and Diacid Chlorides	117
Interfering Chemical Factors	118
Impurities	119
Solvent Reactivity	120
Side Reactions with Amine Acceptors	121
Diacylation	122
Reaction Rates	122
Physical and Mechanical Effects	123
Temperature	123
Concentration	124
Equivalence of Reactants, Mixing, and Stirring	124
Acid Acceptors	131
Secondary Amine Acceptors	131
Tertiary Amine Acceptors	134
Diamines as Acceptors	137
Inorganic Bases as Acceptors	141
Solvents	

Function of the Solvent	142
Metastable Solutions of Polymer	143
Selection of Polymerization Media by the Solubility of Model Compounds	146
Reactivity of Polymer Precipitates	149
Polyesters from Bisphenols and Diacid Chlorides	152
Side Reactions	152
Functions of the Acid Acceptor	152
Accelerators	154
Rate of Mixing and Time and Temperature of Polycondensation	154
Polyureas and Polyurethanes by Hydrogen Transfer Reactions	155
Side Reactions	155
Time and Temperature	157
Mixing	157
Selection of Solvents	157
Reactant Balance	159
Applications	161
References	161
V. Polyamides and Polyureas	163
Introduction	163
Polyamides	163
Polymer Types Requiring Special Process Conditions	163
Aliphatic Polyterephthalamides	187
Polyorthophthalamides	187
Polyamides from Aromatic Diamines	190
Polyamides from AB Type Intermediates	193
Polycondensation Reactions without Acid Halides	195
Diamines with Trichloromethyl and Tetrachloroethylene Esters	197
Diamines with Diacyl Bis(orthophosphate Diesters)	200
Diamines with Adipic Bis(ethyl Carbonic) Anhydride	200
Diamines with Bisnitroamides	201
Diamines with Esters of Oxalic Acid	201
Syntheses with Heterocyclic Amides (Azolides)	201
Diamines with Dithiooxamide	202
Polyaddition Reactions	203
Diamines with Carbon Suboxide	203
Poly(methylene Diamides) from Aldehydes and Dinitriles	203
Dinitriles and Tertiary Diols	208
Cyclic Imines with Acid Anhydrides	209
Polyureas	209
Diamines with Phosgene and Thiophosgene	210
Diamines with Biscarbamyl Chlorides	211
Diamines with Diisocyanates	217
Polyureas by Other Reactions	223
Copolymerization and Copolymers	224
Alternating Copolymers	225
Random Copolymers	230
Block Copolymers	232

Applications, Structures, and Properties	234
Deuterium-Substituted Polyamides	234
Polyamides and Polyureas with Reactive Functional Groups	234
Polymers with Carboxyl, Hydroxyl, Thiol, Amine, and Sulfonic Acid Groups	234
Heteroatom Links and Heterocyclic Structures	236
Unsaturation	239
<i>Cis-trans</i> Isomers	239
Polyamides from Carbohydrates and Optically Active Intermediates ...	240
Physical Property-Structure Relationships	241
Polymer Melting Temperature	241
Solubility in Organic Solvents	247
Water Absorption	251
References	253
VI. Polyurethanes	261
Introduction	261
Polymer Preparation	271
Interfacial Polycondensation Method	271
Bischloroformates with Diamines	271
Biscarbamyl Chlorides with Bisphenols	278
AB Type Intermediates	279
Solution Polycondensation Method	279
Bischloroformates with Diamines	279
Polyurethanes by Diisocyanate-Diol Addition	281
Bis(cyclic Carbonates) with Diamines	282
Bis(trichloroacetates) with Piperazine	283
Bis(imino Cyclic Carbonate) with Diacids	284
Bis(<i>N,N</i> -ethyleneurethanes) with Dithiols	285
Properties, Structural Variations, and Applications	286
General Physical Characteristics	286
Variations in Chemical Structure	287
Effect of <i>Cis</i> and <i>Trans</i> Structures on Polymer Preparation and Properties	287
Unsaturation	290
Polar Substituents	291
Polythiourethanes	293
Copolymerization and Copolymers	293
Random Copolymers	293
Alternating Copolymers	295
Block Copolymers	295
Direct Formation of Fibers and Coatings	300
References	300
VII. Polysulfonamides and Polyphosphonamides	305
Introduction	305
Polycondensation Procedures	306
Interfacial Polycondensation	306
Purity of Materials	306

Dispersing Agent	308
Temperature	308
Concentration of Reactants	309
Basicity of Acid Acceptor	310
Sulfonimide Formation	310
Aliphatic Polysulfonamides	313
Polyphosphonamides	313
Solution Polycondensation	315
Properties, Structural Variations, and Processing	316
Solubility	316
Hydrolytic Stability	317
Melt Temperature and Stability	317
Copolysulfonamides	318
Polysulfonamides from Chlorinated Disulfonyl Chlorides	319
Spinning of Polysulfonamides	319
Post-Reactions on Polysulfonamides	321
<i>N</i> -Chlorinated Polysulfonamides	321
<i>N</i> -Alkylation of Polysulfonamides	323
References	323
VIII. Polyesters	325
Introduction	325
Polycondensation Procedures	332
Purification of Bisphenols	332
Interfacial Polycondensation Method	342
Polymerization Mechanism	342
Selection of Solvents	344
Detergents	349
Accelerators	349
Antioxidants	354
Temperature, Duration of Reaction, Speed of Mixing and Stirring	355
Concentration Level and Phase Ratios	357
Acid Chloride Hydrolysis and Its Relation to the Ratio of Intermediates	358
Molecular Weight Control by Monofunctional Intermediates	360
Solution Polycondensation Method	361
Additional Process Variations	362
Polymers from Diacids, Bisphenols, and Phosgene	362
Isolation of Polyesters from Polymerization Mixtures	364
Polyesters by Routes Not Involving Diacid Halides	364
Halomethyl Esters with Diols	364
Diimidazolides with Diols	365
Carbon Suboxide with Diols	365
Trifluoroacetic Anhydride as an Esterification Promoter	366
Condensation of Dinitriles with Diols	367
Ring-Opening Addition Reactions	367
Self-Addition of Bisaldehydes	367
Poly(thiol Esters)	368
Polysulfonates	370

Polyphosphates and Polyphosphonates	370
Copolymerization	371
Alternating Copolycarbonates	371
Random Copolymers	374
Block Copolymers	375
Applications and Physical Property Structure Relationships	379
General Application and Properties	379
Polyesters with Additional Functional Groups	380
Polysulfonates, Thioesters, and Thiocarbonates	383
Post-Reactions of Polycarbonates	385
References	386
IX. Unusual and Lesser Known Polymer Classes	395
Introduction	395
Polymers Derived from Hydrazines and Hydrazides	395
Polymonoacyl- and Polydiacylhydrazines	397
Polybiureas, Polysemicarbazides, and Polyacylsemicarbazides	399
Polyazines	403
Polyacylhydrazones	403
Polyazomethines	404
Polyazobenzenes	405
Polymers Derived from Dioximes	405
Poly(<i>ortho</i> -carboxy Aromatic Amides) and Polyimides	409
Polyoxadiazoles and Polytriazoles	412
Polybenzimidazoles, Polybenzoxazoles, Polybenzborimidazolines, and Polythiazoles	414
Polyanhydrides	416
Poly(arylenedioxy Silanes), Poly(silphenylene Siloxane), and Poly(arylenedioxy Silazanes)	416
Polyethers	417
Poly(cyclic Acetals)	421
Polyamines	422
Polysulfides	423
Polymonosulfides	423
Oxidation of Polymonosulfides to Polysulfones	426
Polydisulfides	426
Polymercaptals and Polymercaptols	427
Polystannanes	429
Polymers from Decaborane Derivatives	431
Polymers with Metal Chelate Links	431
Polyhydrocarbons	432
References	435
X. Molecular Characteristics	441
Introduction	441
Molecular Weight Distribution	441
Distribution by Fractional Precipitation and Sedimentation Experiments	442
Nonuniformity Indicated by Intrinsic Viscosity-Molecular Weight Ratios	445

CONTENTS

xvii

Ratio of Weight-Average to Number-Average Molecular Weights	447
Mechanical Fractionation of Polymers	450
Formation and Isolation of Oligomers	451
Melting and Hydrolytic Treatments	455
Viscosity Number-Molecular Weight Relationships	456
Terminal Groups on Polymer Molecules	457
Branched Structures	460
References	462
Appendix A. Classification of Polymers	465
Linear, Branched, and Network Structures	465
Condensation Versus Addition Polymers and Processes	465
Polymer Nomenclature	467
References	468
Appendix B. Definition of Physical Characterization Tests	469
Dilute Solution Viscosity Numbers	469
Tests of Softening and Melting Behavior	471
Fiber Tests	472
References	472
Appendix C. Intermediates and Solvents	474
Solvents	474
Diacid Chlorides	474
Diamines	475
Bisphenols	475
Diisocyanates	475
Sources of Polymer-Forming Intermediates	475
References	481
Appendix D. Preparation of Polymers	483
Appendix E. Bibliography of Additional Recent Publications	510
Acylation Rates of Amines	510
Hydrolysis of Acid Halides	510
Interfacial Polycondensation on Fibers	510
Polyamides	510
Polyurethanes	512
Sulfonamide Solubility	512
Polycarbonates	512
Polyesters Other Than Polycarbonates	514
Polysulfonates and Polysulfites	514
Polyphosphonates and Polyphosphonites	515
Polyimides	515
Polyhydrazides	515
Polybenzimidazoles	515
Polypyrazoles	515
Dialdehyde Condensations	515

Polysilanes	515
Polyethers	515
Polystannanes	516
Poly(<i>p</i> -xylylidene)	516
Molecular Weight Distribution	516
Hydrolysis of Imide Groups ..	516
