

CONTENTS

Preface	vii
1. Review of recent advances in plasma polymerization	1
PLASMA POLYMERIZATION OF HYDROCARBONS	
2. Competitive ablation and polymerization (CAP) mechanisms of glow discharge polymerization	37
3. Propylene glow discharge polymerization in the presence of bromotrichloromethane	53
4. The formation mechanism of styrene polymer film by glow discharge direct method	65
5. Polymerization of hydrocarbons in a pulsed plasma	79
6. Plasma diagnostics of polymerizing benzene plasma – plasma diagnostics as a tool for controlling plasma reaction	87
7. Effects of plasma-polymerized film on the current-voltage characteristics of single probe	115
8. Fourier transform infrared analysis of plasma-polymerized 2-vinylpyridine thin films	127
PLASMA POLYMERIZATION OF FLUOROCARBONS	
9. ESCA characterization of plasma-polymerized fluorocarbons	147
10. Plasma polymerization of tetrafluoroethylene in a capacitively coupled discharge with internal electrodes	163
11. Plasma deposition of fluorinated compounds	181
PLASMA POLYMERIZATION OF ORGANOMETALLIC SYSTEMS	
12. Metal containing fluoropolymer films produced by simultaneous plasma etching and polymerization	195
13. Plasma-polymerized organosilicon thin films – structure and properties	219
14. Thermal modification of plasma-polymerized organosilazane thin films	237
PLASMA-INITIATED POLYMERIZATION	
15. Plasma-initiated polymerization and copolymerization of liquid vinyl monomers	253
16. Characterization of crystalline poly (trioxane) and poly (tetra-oxane) obtained through plasma-initiated polymerization	263

APPLICATIONS OF PLASMA POLYMERIZATION

17. Tandem plasma-polymerization apparatus for continuous coating of fibers and films	277
18. Mechanical properties of polymer composites using plasma-modified mica filler	287
19. Plasma etching of poly[<i>N,N'</i> -(<i>p,p'</i> -oxyphenylene) pyromelliti-mide] film and photo/thermal degradation of etched and unetched film	299
20. Plasma polymerization of DT-filled glass shells for laser fusion targets	315
Index	331
