Chapter 1	Synthesis of Graft and Block Copolymers of Starch	
		George F. Fanta
1.	Introduction	1
2.	Free-Radical Graft Copolymerization	2
	(i) Initiation	2
	A. Chemical Methods	2
	B. Radiation Methods	4
	(ii) Graft Copolymerization	5
	A. Acrylonitrile	5
	B. Acrylamide	11
	C. Acrylic Acid	12
	D. Monomers with Amino Substituents	14
	E. Methyl Methacrylate	16
	F. Acrylic Acid Esters	18
	G. Vinyl Acetate	18
	H. Styrene	19
	I. Butadiene	19
	J. Vinyl Chloride	20
	K. N-Vinyl-2-Pyrrolidone	20
	(iii) Proof of Grafting	20
3.	Anionic Graft Copolymerization	21
4.	Graft Copolymerization by Other Methods	23
5.	Block Copolymerization	23
	References	24
Chapter 2	Properties and Applications of Graft and Block Copolymers of Starch	
		George F. Fanta
1.	Properties	29
2.	Potential Applications	32
	(i) Thickening Agents	32
	A. Saponified Starch-g-Poly(Methyl Acrylate) Copolymers	32

B. Saponified Starch-g-Polyacrylonitrile Copolymers. . .	35
C. Starch-g-Poly(Acrylamide-coacrylic Acid) Copolymers.	39
D. Other Graft Copolymers.	41
(ii) Paper Additives.	41
(iii) Flocculation and Flotation.	42
(iv) Miscellaneous Applications.	43
A. Application to Fibres.	43
B. Ion Exchangers.	43
C. Support Materials for Dry Batteries.	44
D. Microcapsules.	44
References.	44

Chapter 3 Synthesis and Characterization of Natural Rubber Block and Graft Copolymers

R. J. Ceresa

1. Introduction.	47
2. Syntheses of Block and Graft Copolymers of Natural Rubber.	47
(i) Grafting of Polymers to Natural Rubber by Transfer Mechanisms.	47
(ii) Graft Copolymerization via the Unsaturation in Natural Rubber.	50
(iii) Direct Initiation of Block Copolymerization by Peroxide or Hydroperoxide Groups.	51
(iv) Redox Polymerizations.	54
(v) Photochemical Synthesis.	56
(vi) Mechanico-Chemical Reactions.	58
A. Cold Mastication of Natural Rubber Blends.	60
B. Cold Mastication of Natural Rubber with Vinyl Monomers.	63
C. Comminution and Vibro-Milling of Natural Rubber	64
D. Ultrasonic Irradiation and High-speed Stirring of Natural Rubber Solutions.	66
E. Freeze-Thaw Cycling of Rubber Solutions.	66
F. Spark Discharges in Rubber Solutions.	66
G. Vapour and Liquid-Phase Swelling.	67
(vii) High Energy Irradiation Syntheses.	70
3. Block and Graft Copolymers of Vulcanized Natural Rubber	73
4. Block and Graft Copolymers of Natural Rubber Derivatives.	74

5. Fractionation of Block and Graft Copolymers of Natural Rubber.	75
6. Characterization of Block and Graft Copolymers of Natural Rubber.	76
7. Some Conclusions as to the Future Development of Block and Graft Copolymerization with Natural Rubber.	78
References.	78

Chapter 4 Properties and Applications of Block and Graft Copolymers of Natural Rubber **T. D. Pendle**

1. Introduction.	83
2. Properties of Block and Graft Copolymers of Natural Rubber.	83
(i) Behaviour in Solution.	83
(ii) Glass Transition Temperatures.	85
(iii) Vulcanization Properties.	86
(iv) Solvent Swelling of Vulcanizates.	88
3. Graft Copolymer Latices.	89
4. Applications of Copolymers of Natural Rubber.	94
(i) Block Copolymers.	94
(ii) Graft Copolymers.	95
References.	97

Chapter 5 Syntheses of Elastomeric Block Copolymers by Anionic Polymerization **Lewis J. Fetters**

1. Introduction.	99
2. Syntheses.	101
(i) Block Copolymer Preparation by Homogeneous Anionic Polymerization.	101
(ii) Three-Stage Process with Monofunctional Initiators.	103
(iii) Two-Stage Copolymerization Involving Dilithium Initiators.	113
(iv) Monofunctional Initiation and Coupling.	118
(v) Two-Stage Block Homopolymerization and Copolymerization of Styrenes and Dienes by Organolithium	125
3. Effect of Polymeric Impurities.	126
4. Characterization of Block Copolymers.	128
References.	129

Chapter 6 Properties and Application of Elastomeric Block Copolymers

G. Holden

1. Introduction.	133
(i) Composition of Elastomeric Block Copolymers.	133
(ii) Properties of Elastomeric Block Copolymers.	134
A. Elastomeric Properties.	134
B. Resilience.	135
C. Elastic Modulus-Temperature Relationship.	136
D. Frictional Properties.	136
E. Other Properties.	137
2. Basic Properties of Thermoplastic Elastomers.	138
(i) Structure of Thermoplastic Elastomers.	138
A. Segmental Incompatibility and Arrangement.	138
B. Effect of Temperature and Solvents.	140
C. Domain Size.	141
D. General Application of Domain Theory.	143
(ii) Effect of Molecular Weight.	144
A. Tensile Properties.	144
B. Flow Properties.	145
(iii) Effect of Molecular Weight Distribution.	146
(iv) Effect of Changes in Monomer Ratio.	146
A. Tensile Properties.	146
B. Flow Properties.	148
(v) Effect of Composition of the centre segment.	152
(vi) General Properties.	153
A. Viscoelastic Behaviour.	153
B. Activation Energy of Flow.	153
C. Elastic Modulus.	157
D. Chain Entanglements.	158
E. Filler Effect.	158
F. Swelling Behaviour.	159
G. Tensile Strength.	160
H. Mechanism of Tensile Failure.	161
I. Stress-Optical Coefficient.	162
3. Applications of Elastomeric Block Copolymers.	162
(i) Adhesives, Caulks, Sealants and Coatings.	164
A. Physical Form and Handling.	164
B. Solution Properties.	165
C. Compounding with Resins.	169
D. Compounding with Oils.	171
E. Compounding with Fillers.	172

F. Compounding with Asphalt.....	172
G. Compounding in Thermosets.....	172
H. Stabilization.....	176
I. Formulating Adhesives with Elastomeric Block Copolymers.....	177
(ii) Extrusion and Moulding of Articles.....	180
A. Uses.....	184
B. Processing Details.....	186
C. Injection Moulding.....	186
D. Blow Moulding.....	189
E. Vacuum Forming.....	190
F. Extrusion.....	190
References.....	190

Chapter 7 Grafting onto Wool and Silk

Kozo Arai

1. Chemistry and Preparation of Graft Copolymers of Wool and Silk.....	193
(i) Free-Radical-Initiated Graft Copolymerizations.....	193
A. Preparation of Graft Copolymers.....	193
(1) Chemical Methods.....	193
(2) Radiation Methods.....	199
B. Grafting onto Chemically Modified Wool.....	201
C. Diffusion-Controlled Nature of the Grafting Process.....	206
(ii) Graft Copolymerization to Silk Fibroin Fibre.....	209
A. Vapour Phase Grafting.....	209
B. Grafting in the Absence of Initiators.....	213
(iii) Interfacial Polycondensation.....	216
A. Formation of Polymer in Wool.....	216
B. Location of Polymer and Grafting Sites in Wool.....	217
2. Proof of Grafting.....	219
(i) Introduction.....	219
(ii) End group Analysis of Isolated Polymer.....	220
A. Aqueous Redox Reaction Systems.....	220
(1) Interpretation of number of end groups.....	224
(2) Effect of reaction temperature on the number of end groups.....	226
B. Methanol-Benzoyl Peroxide System.....	228
C. Gamma-Radiation Synthesis.....	231
D. Emulsion Systems.....	233
E. Organic Solvent Systems.....	234

(iii) Amino Acid Analysis	234
(iv) Infrared Spectroscopy	236
3. Mechanism of Graft Copolymerization	238
(i) Methyl Methacrylate	238
A. Rate of Grafting	238
(1) Effect of Concentration of monomer	238
(2) Effect of Concentration of thiol groups	240
B. Average Molecular Weight of Graft Copolymer	241
(1) Effect of Concentration of monomer	241
(2) Effect of the content of thiol groups	242
C. Grafting Sites	243
D. Kinetics of Graft Copolymerization	245
E. Influence of Reaction Temperature	249
F. Diffusion of Monomer to Growing Sites	254
G. Location of Grafted Polymer in Fibres	257
(ii) Ethyl Acrylate	257
References	265

Chapter 8 Structure and Properties of Wool Graft Copolymers

Kozo Arai

1. Location of Grafted Polymer in the Wool Structure	269
(i) Electron Microscopy	269
(ii) Actual Dimensions of Grafted Polymers	280
2. Mechanical Properties of Wool Graft Copolymers	282
(i) Introduction	282
(ii) Stress-strain Behaviour in Water	283
A. General	283
B. Water Content	284
C. Load-Extension Curves	285
D. Hysteresis Properties	288
3. Relationship Between Alpha- and Beta-Forms in the Wool Keratin of Grafted Fibres	292
(i) Introduction	292
(ii) Density of Grafted Fibres	293
(iii) X-Ray Diffraction	294
A. Diffraction Photographs	294
B. Diffraction Intensity of the Wool Fractions	297
(iv) The Alpha-Beta Transformation in Keratin	300
References	308

Chapter 9 Properties and Applications of Wool Graft Copolymers
William L. Wasley

1. Introduction	311
2. Interfacial Graft Copolymerization on Wool	312
(i) Shrink Resistance of Grafted Fibres	312
(ii) Dependence of Properties on Grafting	312
3. Vinyl Graft Copolymerizations	313
(i) Fibre Mechanical Properties	313
(ii) Water Absorption	315
(iii) Grafting of Preformed Polymers	315
(iv) Grafting onto Wool Fabrics	316
4. Radiation-Induced Graft Copolymerizations	316
(i) Nature of Grafting Reaction	317
(ii) Electron Microscopy of Grafted Fibres	320
(iii) Mechanical Properties of Grafted Fibres	320
5. Polymer Crosslinking with Possible Grafting	322
(i) Self-Crosslinking Polyacrylates	323
References	324
Appendix—Summary of Literature on Graft Copolymerization on Wool	329
Addendum	335
Chapter 1	335
