Chapter I. MOLECULAR WEIGHTS OF POLYMERS	
Fundamental Concepts on the Various Molecular Weights of High Polymers	7
General Description of the Various Methods for Determination of Molecular Weights	11
End group assay	11
Ebullioscopy and cryoscopy	12
Osmotic pressure	14
Light scattering	15
Sedimentation in ultracentrifuge	17
Viscosity	20
Other methods	21
Molecular Weight Distribution of High Polymers	22
Fractionation	22
Turbidimetric titration	24
Sedimentation in ultracentrifuge	25
The Influence of the Molecular Weight and Molecular Weight Distribution on	
Mechanical Properties	27
Bibliography	28
Chapter II. VISCOSITY	
Dependence of the Intrinsic Viscosity of Polymers Solutions on the Molecular Weight	29
Influence of the Interaction between Macromolecules and Solvent Molecules on the	
Viscosity of the Solution	33
Influence of Concentration	33
The influence of the solvent and of the temperature on $[\eta]$	35
Influence of the rate of shear on $[\eta]$	36
Determination of Viscosities in a Capillary Viscometer	38
Apparatus for the Determination of Molecular Weights of High Polymers by the	
Viscometric Method	42
Viscometer	43
Stop watch	43
Thermostat	44
Determining viscosities under special conditions	45
Experimental Procedure in Viscosity Determinations and Calculation of Results	46
Preparation of polymer solution	46
Determination of the efflux time of the solvent	46
Determination of the efflux time of the solution	47
Treatment of the results	47
An approximate estimation of the intrinsic viscosity	49
Precautions to be observed in determination of viscosities	50
Evaluation of the experimental accuracy	50
Bibliography	51
Chapter III. END GROUP ASSAY	
Chemical determination of end groups	53
Determination of end groups in polyamides	55
Determination of end groups in polyesters	59
Bibliography	61
Chapter IV. OSMOTIC PRESSURE	
Osmotic Pressure of Solutions of Polymers	63
Osmometers	67
Osmometers with horizontal membranes	68
Osmometers with vertical membranes	69
Osmometers with bag-shaped membranes	72
Semipermeable membranes	73
Preparation of semipermeable membranes	75
Osmotic-Pressure Measurements	76

Membrane asymmetry	76
Treatment of cell and of membrane	77
The method of osmotic equilibrium [Static elevation]	77
Half-sum method	77
The zero flow method	78
Calculation of Number-Average Molecular Weight from Osmotic Pressure Data	79
Corrections	79
Extrapolation of experimental data	81
Evaluation of the accuracy of the method	84
Bibliography	84

Chapter V. LIGHT SCATTERING

The Intensity of Light Scattering in Polymer Solutions	86
Scattering of light	86
The molecular theory	87
The fluctuation theory	89
Turbidity	90
Degree of depolarization of the scattered light	91
Internal Interference of Scattered Light	92
Light scattering functions	92
Special features of scattering by random coil	95
Summary	99
Photometers for Measuring the Light Scattering	100
Light Source	101
Cells for the determination of light scattering	102
Apparatus for measuring the intensity of scattering	103
Differential Refractometers	106
The optics	106
Cells	108
Calibration of the instrument	108
Experimental Procedure and Treatment of Results	109
Purification of solutions and solvents	109
Sequence of measurements	110
Standards	111
Corrections to the results of measurements	112
Treatment of data	113
Estimate of accuracy	115
Bibliography	115

Chapter VI FRACTIONATION OF POLYMERS

Solubility and Fractionation of Polymers	118
Fractionation procedures	123
Molecular weight distribution curves obtained by fractionation	134
Bibliography	139
