

CONTENTS

Polymer Characterization: Light-Scattering Studies of Solutions During Precipitation of Polymer	1
Modern Methods for Determining Number-Average Molecular Weights	17
Molecular Weight and Compositional Distribution in Nylon 66	37
A Comparative Study Between Light Scattering, Osmometry, and Gel Permeation Chromatography for Polystyrenes of Narrow and Broad Molecular Weight Distributions	39
Number-Average Molecular Weight of Polypropylene by High Temperature Osmotic Pressure Measurements	53
Development of GPC for Molecular Weight Characterization	65
Determination of Molecular Weight Distribution: A Comparison of GPC and Column Elution Techniques	81
Gel Permeation Chromatography of Low Molecular Weight Compounds	111
A Study of the Separation of Active and Inactive Polystyrenes by Gel Permeation Chromatography	125
Exclusion Chromatography using Columns Packed with Silica Beads	137
Intrinsic Viscosity of Low Molecular Weight Polymers	157
Characterization of Thermosetting Resin Curing Behavior by Thermal Analysis under Pressure	159
Characterization of Novel Polymers by Softening Behavior, Thermogravimetric Analysis, and Differential Thermal Analysis	711
Polymer Identification by Pyrolysis Gas Chromatography	189
The Use of Depolarized Light Intensity Measurements in Polymer Characterization	191
Analytical Value of Light-Scattering Measurements in Streaming Systems	205
Measurement of Small Particle Size and Distribution by Angular Dependent Light Scattering	207
The Temperature Dependence of Depolarization	225
Nuclear Magnetic Resonance Spectra of Methyl Methacrylate Substituted Styrene Copolymers	227
Triad Distributions of Styrene-Methyl Methacrylate Copolymers to High Conversions by NMR Studies	245
Optical Characterization of the Orientation of Amorphous Polymers and Amorphous Parts of Crystalline Polymers	255
Measurement of Crystallinity in Vinyl Chloride Polymers by X-Ray Diffraction	275
Author Index	287
Subject Index	287
