

CONTENTS

I. Molecular Weights and Sizes. <i>By S. G. Weissberg, S. Rothman, and M. Wales</i>	1
I. Introduction.....	1
II. Principles.....	1
1. Molecular Weight Averages.....	1
2. Molecular Weight Distribution.....	3
3. Colligative Properties.....	6
III. Fractionation.....	7
IV. Viscometry.....	12
1. Fundamental Concepts.....	12
2. The Capillary Viscometer.....	13
3. Interpretation of Intrinsic Viscosity.....	16
4. Viscosity Determination.....	18
5. Precautions in Viscometry.....	22
V. Osmometry.....	23
1. Theory.....	23
2. Concentration Dependence of Osmotic Pressure.....	24
3. Osmotic Pressure Determination...	25
4. Membrane Problems.....	29
VI. Light Scattering.....	29
1. Theory.....	29
2. Evaluation of Particle Size.....	32
3. Light Scattering Determination.....	37
4. Precipitation Turbidimetry.....	41
VII. Ultracentrifugation. <i>By M. Wales</i>	46
1. Scope.....	46
2. Theory.....	47
3. Sedimentation of a Boundary between Solute and Solvent.	48
4. Sedimentation Equilibrium of a Polymer-Homologous Mix- ture.....	61
5. The Transient State.....	66
6. Typical Molecular Weight Determinations.....	69
II. X-Ray Diffraction. <i>By Aaron S. Posner</i>	79
I. Introduction.....	79
II. Theoretical Background.....	79
1. Elements of Crystallography.....	79
2. X-Ray Diffraction.....	81
III. X-Ray Measurements.....	82
1. Crystalline Materials.....	82
2. Fibrous and Amorphous Materials.....	91
IV. Selected Topics Related to Polymer Studies.....	95
1. Crystallinity of Polymers.....	95

2. Crystal Structure Determinations.. . . .	98
3. Crystalline and Amorphous Mixtures.....	101
4. Crystallite Orientation in Polymers.....	102
5. Low Angle Scattering of X-Rays.....	104
III. Optical Methods. By <i>A. F. Forziati</i>	109
I. Introduction.....	109
II. Refractive Index.....	109
1. Theory.....	109
2. Instrumentation.....	113
3. Measurement.....	121
4. Applications.....	136
III. Birefringence.....	138
1. Theory.....	138
2. Measurement.....	140
3. Birefringence in Photoelastic Stress Analysis.....	142
4. Flow Birefringence.....	146
IV. Dichroism.....	147
V. Optical Rotation.....	147
1. Theory.....	147
2. Measurement.....	151
VI. Light Transmittance and Haze.....	153
IV. Differential Thermal Analysis. By <i>H. E. Kissinger and S. B. Newman</i>	159
I. Introduction.....	159
II. Principles.....	160
III. Instrumentation.....	161
IV. Applications to Organic Materials.....	164
V. Applications to Polymers.....	166
1. Resin-Forming Reactions.....	167
2. Heats of Polymerization.....	170
3. Degree of Crystallinity.....	173
4. Transition Temperatures.....	174
5. Degradation Mechanisms.....	176
6. Identification.....	177
VI. Potential Uses of DTA.....	177
V. Pyrolysis. By <i>Leo A. Wall</i>	181
I. Introduction.....	181
1. Role of Thermal Decomposition in Analysis.....	181
2. Classical Studies of Polymer Structure by Pyrolysis.....	183
II. Theoretical Treatments of Polymer Decomposition.....	185
1. Random Processes.....	185
2. Chain Reactions.....	194
III. Pyrolysis of Homopolymers.....	208
1. Degradation Mechanisms.....	208
2. Activation Energies.....	226
3. Side Group Decomposition.....	227
IV. Pyrolysis of Copolymers.....	229
1. Effects of Structure on Decomposition Products.....	229

2. Monomer Yields from Various Copolymers	234
3. Kinetics of Copolymer Decomposition	240
V. Measurement of Rates of Pyrolysis	241
1. Weight-Loss Method	241
2. Volatiles-Pressure Method	243
VI. Mass Spectrometry. <i>By Leo A. Wall</i>	249
I. Introduction	249
II. Principles	249
III. Time-of-Flight Mass Spectrometer	251
IV. Measurement of Pyrolysis Products of Polymers	252
1. Separate Pyrolysis	253
2. Pyrolysis within the Mass Spectrometer	257
V. Mass Spectra of Complex Molecules	258
VI. Mass Spectra of Pyrolyzed Polymers	260
VII. Mass Spectra of Deuterated Polymers	263
VIII. Radiolysis, Photolysis, Oxidation	266
VII. Ultraviolet Spectrophotometry. <i>By M. Tryon and E. Horowitz</i>	269
I. Introduction	269
II. Principles	269
III. Instrumentation	270
1. Spectrometers	270
2. Detectors	271
IV. Sample Preparation	272
1. Solutions	272
2. Films	276
3. Pellets	278
4. Pyrolysis	278
V. Applications to Analysis	279
1. Qualitative Analysis	279
2. Quantitative Analysis	280
VIII. Infrared Spectrophotometry. <i>By M. Tryon and E. Horowitz</i>	291
I. Introduction	291
II. Principles	292
III. Instrumentation	294
1. Infrared Light Sources	294
2. Monochromators	295
3. Detectors	298
4. Photometers	299
IV. Sample Preparation	300
1. Films	300
2. Solutions	302
3. Mulls (Suspensions)	306
4. Pellets	307
5. Pyrolysis	317
V. Qualitative Applications	317
VI. Quantitative Applications	321
1. Using Lambert's Law	321

2. Using Beer's Law	324
VII. Polarized Infrared	326
VIII. Raman Spectra	327
IX. Fluorescence. <i>By A. F. Forziati.</i>	335
I. Introduction	335
II. General Principles	335
III. Ultraviolet Sources	336
IV. Fluorescence Detectors	340
V. Analytical Applications	343
1. Differentiation of Polymers and Additives	343
2. Differentiation of Textile Fibers	349
3. Natural and Synthetic Rubbers	349
4. Additives in Vulcanizates	349
5. Estimation of Molecular Weight	354
X. Chromatography. <i>By James M. Cassel.</i>	359
I. Introduction	359
II. General Methods	359
1. Elution Analysis	360
2. Displacement Development	362
3. Frontal Analysis	363
III. Techniques and Apparatus	364
1. Adsorption	364
2. Partition	366
3. Ion Exchange	367
4. Special Solid-Solution Techniques	368
5. Gas (Vapor Phase) Chromatography	371
IV. Difficulties in Chromatography of Polymers	379
V. Applications to Polymeric Materials	380
1. Fractionation	380
2. Separation of Natural Polymers	389
3. Identification of Polymers	392
4. Analysis of Polymeric Materials	397
XI. Polarography. <i>By G. M. Brauer.</i>	405
I. Introduction	405
II. Principles. <i>With P. E. Slade, Jr.</i>	406
1. Theory	406
2. Types of Currents Obtained with the DME	409
3. Amperometric Titrations	416
III. Instrumentation. <i>With P. E. Slade, Jr.</i>	418
1. Polarographs	418
2. Indicator Electrodes	420
3. Reference Electrodes	425
IV. Analysis of Organic Compounds	426
1. Applicability	426
2. Preparation of the Test Solution	428
3. Common Procedural Techniques	431

V. Analysis of Polymers and Polymer Components	435
1. Unsaturated Hydrocarbons	436
2. Alcohols, Glycols, and Phenols	447
3. Aldehydes	448
4. Ketones	450
5. Acids and Acid Derivatives	450
6. Halogen Compounds	456
7. Amino Acids and Derivatives	457
8. Nitriles	459
9. Azo Compounds	460
10. Peroxides and Hydroperoxides	461
11. Sulfur Compounds	464
12. Estimation of Molecular Weight	474
XII. Magnetic Resonance Spectroscopy. By Leo A. Wall and Roland E. Florin	487
I. Introduction	487
II. Nuclear Magnetic Resonance (NMR)	488
1. Principles of NMR	488
2. Relaxation Spectroscopy (Low Resolution NMK)	494
3. Relaxation Spectroscopy of Polymers	501
4. High Resolution NMR	507
5. High Resolution NMR of Polymers	513
III. Electron Spin Resonance (ESR)	515
1. Principles of ESR	515
2. Measurement Techniques	521
3. ESR of Atoms and Small Free Radicals	526
4. ESR of Polymers	530
Author Index	561
Subject Index	591
