

CONTENTS

I. Systematic Procedures. <i>By G. M. Brauer and E. Horowitz</i>	1
I. Introduction.....	1
II. Preparation and Separation of Sample	2
1. Preparation of the Sample.....	2
2. Separation of Constituents.....	2
3. Determination of Purity.....	5
III. Physical Tests.....	6
1. Preliminary Examination.....	6
2. Thermal Decomposition.....	7
3. Transition Points.....	18
4. Density.....	34
5. Index of Refraction.....	45
6. Fluorescence.....	53
7. Absorption Spectra.....	53
IV. Elementary Analysis.....	54
1. Qualitative Tests.....	54
2. Quantitative Tests.....	62
V. Chemical Tests.....	75
1. Saponification and Acid Numbers.....	75
2. Acetyl Number.....	85
3. Iodine Number.....	86
VI. Identification Tests.....	91
1. Solubility.....	101
2. Liebermann-Storch-Morawski Test.....	113
3. Carbonate Fusion.....	113
4. Nitrates.....	131
5. Xanthoproteic Test.....	131
6. Carboxylic Acid Esters.....	131
7. Acetates.....	131
8. Phthalates.....	131
9. Phenols.....	131
10. Formaldehyde.....	134
11. Aldehydes in Acetals.....	134
12. Coumarone-Indene Resins.....	134
13. Specific Reactions for Identification.....	134
II. Color Tests. <i>By G. M. Brauer and S. B. Newman</i>	141
I. Introduction.....	141
II. Selective Tests.....	143
1. Liebermann-Storch-Morawski Test.....	143
2. Dye Stains.....	143

III. Specific Tests.....	154
1. Acids.....	154
2. Acrylics.....	159
3. Alcohols.....	162
4. Aldehydes and Ketones.....	172
5. Aminoplasts and Amines..	179
6. Carbohydrates and Cellulose.....	190
7. Carboxylic Acid Esters.....	195
8. Chlorine-Containing Polymers.....	196
9. Coumarone-Indene Resins...	196
10. Ethylene Oxide and Epoxides.....	197
11. Furfural and Furan Resins.....	202
12. Isocyanate Resins.....	203
13. Lignin.....	205
14. Natural Resins.....	207
15. Nitrate.....	218
16. Nitrile-Containing Polymers..	219
17. Oils.....	221
18. Phenolic Resins.....	222
19. Phthalates.....	228
20. Polycarbonates.....	230
21. Proteins.....	230
22. Rubber and Elastomers.....	235
23. Silicones.....	242
24. Sulfonamide Resins.....	242
25. Sulfhydryl and Disulfide Groups.....	243
26. Vinyl Polymers.....	243
III. Microscopy. <i>By S. B. Newman</i>	261
I. Introduction.....	261
II. General Techniques of Microscopy.....	264
1. Sectioning.....	264
2. Mounting Media.....	277
3. Refractive Index by Immersion.....	279
4. Birefringence.....	285
5. Microfusion.....	287
6. Fiber Count.....	293
III. Fiber Identification by Staining.....	298
1. Cellulose Fibers.....	298
2. Cellulose Acetate Fibers.....	326
3. Ethylcellulose Fibers.....	327
4. Polyamide Fibers.....	327
5. Polyacrylonitrile Fibers.....	328
6. Polyester Fibers.....	328
7. Protein Fibers.....	328
IV. Identification of Resins in Paper Fiberboard and Fabrics.....	334
1. Phenolic Resins.....	334
2. Urea and Melamine Resins.....	336

V. Identification of Resins in Plywood by Staining	338
VI. Identification of Resins in Pressure-Sensitive Tapes by Staining	339
IV. Radiochemical Analysis. <i>By R. E. Florin and L. A. Wall.</i>	349
I. Introduction	349
II. Principles of Radiochemistry	351
III. Measurement of Radiation	356
IV. Synthesis of Labeled Compounds	363
1. Benzoyl Peroxide	363
2. Azobisisobutyronitrile	364
3. Potassium Persulfate	364
4. Sodium Bisulfite	365
5. Sulfur	365
6. Dodecyl Mercaptan	365
7. n-Butyl Mercaptan	366
8. Chlorosulfonic Acid	366
9. Toluenesulfonyl Chloride	367
10. Anionic and Cationic Initiators	367
11. Styrene	367
12. Polyvinyl Acetate	367
V. Preparation of Labeled Polymer	367
1. Polymerization	367
2. Purification	368
VI. Counting of Radiation from Polymers	371
1. Thin Layer Counting of C^{14} and S^{35}	372
2. Thick Layer Counting of C^{14}	372
3. Counting CO_2	373
4. Counting S^{35} as Barium or Benzidine Sulfate	375
5. Counting Other Isotopes	375
6. Simultaneous Determination of Isotopes	375
7. Neutron Activation	376
VII. Treatment of Data	378
VIII. Applications of Radioisotopic Analysis to Polymers	381
1. Kinetic Studies and Molecular Weight Determination	381
2. Chain Transfer	382
3. Ionic Catalysis	382
4. Graft and Block Polymers	382
5. Polyelectrolytes	383
6. Carbohydrates	383
7. Molecular Weights by Inactivation of Biological Polymers	384
8. Plasticizer Vapor Pressures	386
9. Trace Impurities	386
10. Surface Cracks	386
11. Radiation Effects on Polymers	387
V. End-Group Analysis. <i>By M. Hellmann and L. A. Wall.</i>	397
I. Introduction	397
II. Formation of End Groups on Polymers	397
1. Condensation Polymers	398
2. Addition Polymers	399

III. Determination of End Groups.....	401
1. Condensation Polymers.....	401
2. Addition Polymers.....	405
General References.....	413
Cumulative Author Index.....	421
Cumulative Subject Index.....	481
