<b>I. Geometry of Molecules as Revealed by Diffraction Methods</b>	<b>1</b>
A. Introduction	1
B. Von Laue Method	3
C. Method of W. H. and W. L. Bragg	5
D. Method of Debye-Scherrer and Hull	6
E. Rotating Crystal Method of Polanyi, Schiebold, and Weissenberg	8
F. X-Ray Goniometers of Boehm, Buerger, Dawson, Sauter, Schiebold and Weissenberg	9
G. Evaluation of Diffraction Diagrams	10
H. Diffraction Studies with Molecules in the Gaseous State	11
I. Scattering of Neutrons	13
J. Presentation and Discussion of the Principal Results	14
K. A Few Organic Molecules of Special Interest	22
L. Some Special Results in the Field of High Polymers	27
Polyhydrocarbons	27
Polyvinyl Derivatives	31
Polycondensation Products	32
Proteins	33
Cellulose and Derivatives	37
 <b>II. Behavior of Molecules in Electric and Magnetic Fields</b>	 <b>39</b>
A. Introduction	39
B. Polarizability	40
C. Applications of Polarization Measurements	42
D. Dipole Moment	45
E. Application of Dipole Measurements in Determining Molecular Structure	46
F. Scattering of light by Molecules	54
The Intensity of Light Scattered by Molecules	54
The Kerr Effect	58
Degree of Depolarization of the Scattered Light	60
 <b>III. Molecular Spectra</b>	 <b>63</b>
A. Oscillations and Rotations in Molecules	63
B. Moments of Inertia, Nuclear Distances, and Dissociation Energies	67
C. Nuclear Vibrations and Group Frequencies	69

D. Application of Molecular Spectroscopy to Macromolecules	79
Polyhydrocarbons	79
Polyvinyl and Polyacrylic Derivatives	81
Polyesters and Polyamides	82
Various Other Polymers	83
E. Internal Molecular Potential Energy and Free Rotation	83
F. The Double Bond and cis-trans Isomerism	95
G. Internal Molecular Dynamics and Statistics	97
<b>IV. Primary and Secondary Valences</b>	<b>109</b>
A. Primary Valences	110
Heteropolar Bond between Oppositely Charged Ions	110
Homopolar Bond between Neutral Atoms	114
Metallic Linkage	118
B. Secondary Valences	120
Orientation Effect of Rigid Dipoles	120
Induction Effect	121
Quantum Mechanical Interaction of Virtual Dipoles (Dispersion Effect)	122
Superposition of the Three Types of Intermolecular Attraction	123
C. General Remarks on the Formation of Molecular Aggregates	127
Aggregate Formation by Dipole Forces	128
Aggregate Formation by Dispersion Forces	134
D. Intermolecular Forces and Intermolecular Compounds	136
Molecular Associations Involving Conjugated and Aromatic Systems	137
Molecular Associations between Carboxylic Acids	141
Calculation of the Molecular Cohesion	143
E. Intermolecular Forces, Polymer Texture, and Polymer Properties	146
<b>V. Crystal Structure and Crystal Forces</b>	<b>153</b>
A. Classification of Crystals from the Aspect of Forces	153
Ionic Lattices	153
Atomic Lattices	155
Metallic Lattices	162
Secondary Valence Lattices	164
B. Lattices with Different Forces in Different Directions	183
Lattices with Atomic and Ionic Linkages	184
Lattices with Atomic and Metallic Linkages	185
Lattices with Atomic and van der Waals' Bonds	185

<b>VI. Crystal Structure and Crystal Symmetry</b>	<b>187</b>
A. General Remarks on Symmetry of Crystal Lattices	187
B. Primary Valence Lattices	194
C. Primary Valence Sheets	195
D. Primary Valence Chains	198
E. Structure of Silicates	203
F. Shape and Internal Mobility of Molecules in Relation to Lattice Structure	206
<b>VII. Liquids, Mesophases and the Amorphous-Crystalline Character of Polymers</b>	<b>213</b>
A. General Remarks on the Arrangement of Molecules in Liquids	213
B. Scattering of X-Rays and Electrons in Liquids	215
Scattering of X-Rays by Monatomic Liquids	218
Molecular Structure of Water	224
Structure of Liquids with Chainlike Molecules	227
C. Determination of Size and Shape of Small Crystals by X-Ray Diffraction	230
D. Observations on Mesophases and Liquids Crystals	235
Experimental Results in the Investigation of Mesophases	235
Molecular Arrangement in the Mesophases	237
E. Crystalline-Amorphous Character of Polymeric Materials	242
<b>VIII. Thermodynamics of Solutions</b>	<b>247</b>
A. Colligative Properties of Solutions	248
B. Entropy of Dilution	250
Ideal Solutions	250
Nonideal Solutions	251
Free Volume Theory of Entropy of Dilution	254
Lattice Model for Entropy of Dilution of Flexible Linear Macromolecules	256
C. Heat of Dilution	260
D. Comparison of Theoretical and Experimental Free Energies of Dilution	263
E. Solubility of Macromolecules	267
F. Fractionation of Polymer Solutions	270
G. Molecular Weight Averages	274
H. Swelling of Polymers	275
<b>IX. Kinematics of Liquids and Solutions: Viscosity, Diffusion, and Ultracentrifugation</b>	<b>279</b>
A. Viscosity of Simple Liquids and Solutions	279
B. Einstein's Law for Viscosity of Colloidal Suspensions	283
C. Staudinger's Law for Viscosity of Macromolecular Solutions	288
D. Theory of Viscosity for the Free-Draining Linear Molecule	291

E. Intrinsic Viscosities of Chain Molecules Accounting for Hampered Flow of Solvent Through the Molecules	295
F. Effect of Concentration on Viscosity of Macromolecular Solutions	300
G. Viscosity of Polyelectrolyte Solutions	302
H. Anomalous Flow of Liquids	304
I. Free Diffusion of Dissolved Particles	306
J. Application of High Centrifugal Fields	312
Sedimentation Equilibrium	313
Sedimentation Velocity Methods	314
Some Results Obtained by the Ultracentrifuge	316
K. Flow Birefringence of Liquids and Solutions	318
<b>X. Mechanical Behavior of High Polymers</b>	<b>321</b>
A. Concepts of Stress and Strain	321
B. Statistical Thermodynamic Treatment of Elastic Behavior	324
C. Kinetic Theory of Elasticity	328
D. Classical Theory of Viscoelastic Behavior	331
E. Linear Amorphous Polymers	339
F. Chemorheology	348
G. Crystallinity	357
<b>XI. Step Reaction Polymerization</b>	<b>365</b>
A. Step Reaction Polymerizations and Functionality	368
B. Statistics of Bifunctional Condensations	369
C. Ring versus Chain Formation	371
D. Kinetics of Polycondensations	376
E. Detailed Kinetics of Step Reactions: Type I	378
F. Detailed Kinetics of Step Reactions: Type II	379
G. Interchange Reactions in Condensation Polymers	383
H. Statistics of Polyfunctional Condensations and Constitution of Three-Dimensional Condensation Polymers	384
I. Polymerization of Nylon	389
J. Synthetic Polypeptides	391
<b>XII. Chain Reaction Polymerization</b>	<b>395</b>
A. Nature of the Carbon-carbon Double Bond	395
B. Radical Chain Polymerization of Vinyl Monomers	401
C. Effect of Chain Transfer on Degree of Polymerization	410
D. Inhibitors and Retarders	416
E. Absolute Velocity Constants for Vinyl Polymerization	419

F. Copolymerization	424
G. Initiation by Redox Systems	436
H. Diene Polymerization	439
I. Vulcanization	444
J. Effect of Oxygen on Polymerization	447
K. Emulsion Polymerization	450
L. Cationic, Anionic, and Sodium Polymerization	454
<b>XIII. Degradation of High Polymers</b>	<b>459</b>
A. Statistics of Random Degradation of High Polymers	459
B. Kinetics of Random Degradation	462
C. Degradation of Cellulose	465
D. Ozonolysis of Butyl Polymer	470
E. Chain Reaction Depolymerizations	473
F. Oxidation of Polymers: Formation and Breakdown of Hydroper oxides	477
G. Kinetics of Oxygen Absorption	481
H. Scission and Cross-Linking	485
I. Splitting Off of Hydrogen Chloride, Hydrogen Cyanide, etc. during Degradation	486
