

CONTENTS

General Instructions	1
Ground-Glass Equipment	2
Experiments	
1 Melting Points	3
2 recrystallization	15
3 Distillation	21
4 fractional Distillation	27
5 Extraction	35
6 Chromatography	49
7 Reactions of Hydrocarbons	67
8 Preparation of Cyclohexene	75
9 Steam Distillation: The Isolation of (+)-Limonene from Orange Peel	81
10 The Preparation and Reactions of Acetylene	87
11 Preparation of Alkyl Halides	93
12 A Study of Reaction Rates-The Hydrolysis of tert-Butyl Halides	103
13 reactions of the Alcohols	109
14 The Grignard Reaction: Preparation of 2-Methyl-2-hexanol	125
15 Reactions of Aldehydes and Ketones	131
16 Identification of an Unknown Carbonyl Compound	141
17 (a) A Reaction Sequence: The Preparation of Benzoic Acid	147
17 (b) (Optional) The Gas Chromatographic Separation and Identification of the Reaction Products Resulting From the Bromination of Benzene	155
18 Chromic Acid Oxidation: Preparation of Adipic Acid	159
19 Acid Derivatives: Acyl Chlorides, Anhydrides, and Amides	165
20 Esterification: Preparation of Isoamyl Acetate	179
21 Esterification: Preparation of Aspirin and Oil of Wintergreen	183
22 Reactions of the Amines	193
23 The Identification of an Unknown Organic Compound: Infrared and Nuclear Magnetic Resonance Spectroscopy	203
24 Fats and Oils; Soaps and Detergents	211
25 Carbohydrates	219
26 Proteins	229
27 The Preparation of Acetanilide	239
28 Sulfanilamide	243
29 The Friedel-Crafts Reaction: Preparation of p-Acetyl Benzyl Ketone or p-Methoxybenzophenone	247
30 The Coupling of Aromatic Diazonium Compounds; Dyes and Dyeing	253

31 A Molecular Rearrangement: The Preparation of Benzanilide from Benzophenone	257
32 Polymerization	261
Appendix	
Suggested Equipment List	272
Preparation of Special Reagents	273
Chemicals and Reagents Required (By Experiments)	274
Infrared and Nuclear Magnetic Resonance	
Spectra of Compounds Listed in Table 23.1	285
