

## CONTENTS

I. introduction ; general plan	I
II. Purification of organic compounds; criteria of purity; determination of the composition and Formula of a compound	4
III. The paraffins. Homologous series: methane, ethane, and their halogen derivatives	22
IV. Derivativs of methane and ethane containing oxygen. Alcohols, ehters, aldehydes, acids, Acids, acid chlorides, esters amides, acid anhydrides, ketones	40
V. Characteristic Derivatives of methane and ethane containing nitrogen. Nitriles and isonitriles, Amines, nitro-compounds	78
VI. The higher paraffins and their derivatives. Isomerism; secondary and tertiary alcohols	95
VII. Compounds containing several characteristic groups. Polyhydric alcohols; hydroxy-acids; Amino-acids; carbonic acid and its derivatives	105
VIII. Unsaturation in carbon chains. Olefines and their derivaties:acetylenes and their derivaives	126
IX. Benzene and its homologues. Aromatic compounds and aromatic character. Toluene;substitution Products of benzene and toluene nitrobenzene, aniline and diazotization, phenol side-chain Substitution in toluene	143
X. Stereochemistry of the chemistry of space Optical isomerism:geometrical isomerism	162
Index	171
