

## CONTENTS

Introduction	1
Part 1 The Structural Problem of Organic Chemistry	
1 The Chemistry of Living Matter	9
2 Organic Chemical Formulas	29
3 The Theory of Organic Chemical Structures	40
4 The Structures of Alcohols and Carboxylic Acids	57
5 The Constitution of Benzene	69
Part 3 Elements of Chemical Geometry	
6 The Arrangement of Atoms in space	81
7 The Basis of the Optical Rotatory Power of Organic Molecules	98
8 Stereoisomerism and its Representation by Models	109
9 Dynamic Models, Infrared Spectra and Conformation	121
Part 4 Some Basic Methods For Structural Determination	
10 The Structures of Alkenes, Carboxylic Acids and The Synthesis of Derivatives for Their Identification	137
11 Branched-Chain Olefins and Their Synthesis Acetylenes and Carbonyl Compounds	151
12 The Grignard Reagent, Its Use in Syntheses and Structural Determinations	168
13 Structures of Ring Compounds, Dibasic Acids, Syntheses of Acids and Cyclic Ketones	181
14 Keto Acids and Diketones, The Claisen Ester condensation and The Acetoacetic Ester Synthesis	195
15 halogenations and Their Use In Structural Determinations and Syntheses	206
16 Amines and Their Preparation, The Hofmann Degradation and Its Use In Structural Determinations and Syntheses	217
Part 5 Structures of Some Natural Products	
17 Exhaustive Methylation	231
18 Structures of Some Simple Alkaloids	243
19 Proteins I: The Amino Acids	260
20 Proteins II: Configurations of Amino Acids And Structures of Peptides	274
21 Proteins III: Molecular Weights, Primary, Secondary, and Tertiary Structures	288
22 Carbohydrates I: The Configuration of Glucose	301
23 Carbohydrates II: Properties of Cyclic Carbohydrates, Glycosides	311
24 Carbohydrates III: Disaccharides; Gentioibiose, Amygdalin, Maltose	323
25 Carbohydrates IV: The structure And Synthesis of Sucrose	336
26 Nucleic Acids I: The Structures of Pyrimidines and Purines	347
27 Nucleic Acids II: The Structures of Nucleosides, Nucleotides, and Nucleic Acids	363
28 Introduction To Organic Reaction Mechanisms	381
29 Bond Distances, Bond Angles, and a Coulombic Molecular Model	395
30 The Covalent Bond, Resonance	407

31 Atomic and Molecular Orbitals	419
32 Correlations Between Various Physical Properties of Interest to the Chemist	433
Part 2 Chemical Tools For The Investigation of Reaction Mechanisms	
33 Acidities and Their Correlation With Reactivities	447
34 The Law of Mass Action, Chemical Kinetics	458
35 Simple Reaction Mechanisms, Transition States	467
Part 3 Some Specific Mechanisms in The Aliphatic Series	
36 Structural Effects on The Displacement Reaction	481
37 The Addition of Bromine to Double Bonds	492
38 Halogenation of Ketones	503
39 The Elimination Reaction, Stereospecificity	511
Part 4 Some Specific Mechanisms in the Aromatic Series	
40 Electrophilic Aromatic Substitution I: General Considerations	525
41 Electrophilic Aromatic Substitution II: Substituent Effects	536
42 Nucleophilic Aromatic Substitution, Substitution in Heterocycles	548
43 Diazonium Compounds and Their Reactions	560
44 Aromatic Rearrangements I	570
45 Aromatic Rearrangements II: The Benzidine Rearrangement	581
46 Mechanisms of Reduction	595
47 Mechanisms of Oxidation	609
48 Steric Hindrance, The Mechanisms of Esterification and Ester Hydrolysis	622
49 Steric Facilitation, Damping of Resonance	633
50 Radical Mechanisms	644
Part 6 Further Applications of Spectroscopy	
51 Theory of Electronic Absorption Spectra	657
52 Types of Absorption and Emission Spectra	666
53 Nuclear Magnetic Resonance	676
Part 7 Epilogue	
54 Organic Chemistry: Past, Present, and Future	691
Index of Synthetic Methods	703
Reaction Index	708
General Index	717
