

CONTENTS

Chapter 1. atoms and Molecules – A Review	1
Chapter 2. Orbikals and Their Role in Covalent Bonding	11
Chapter 3. Structural Isomerism, Nomenclature, and Alkanes	20
Chapter 4. Stereochemistry	27
Chapter 5. Alkyl Halides; Substitution and Elimination Reaction	43
Chapter 6. Free-Radical Reactions; Organometallic Compounds	57
Chapter 7. Alcohols, Ethers, and Related Compounds	67
Chapter 8. Spectroscopy I: Infrared and Nuclear Magnetic Resonance	80
Chapter 9. Alkenes and Alkynes	91
Chapter 10. Aromaticity, Benzene, and Substituted Benzenes	107
Chapter 11. Aldehydes and Ketones	121
Chapter 12. Carboxylic Acids	137
Chapter 13. Derivatives of Carboxylic Acids	148
Chapter 14. Enolates and Carbanions: Building Blocks for Organic Synthesis	159
Chapter 15. Amines	175
Chapter 16. Polycyclic and Heterocyclic Aromatic Compounds	185
Chapter 17. Pericyclic Redctions	195
Chapter 18. Carbohydrates	204
Chapter 19. Amino Acids and Proteins	213
Chapter 20. Lipids and Related Natural Products	221
Chapter 21. Spectroscopy II: Ultraviolet Spectra, Color and Vision, Mass Spectra	228
