

CONTENTS

A. SOME GENERAL LABORATORY RULES		PAGE
Reaction Velocity and Temperature .		1
Purification of Organic Substances		3
Crystallisation		4
Chromatographic adsorption		14
Distillation		15
Sublimation		26
Distillation with Steam		27
Evaporation of Solvents		29
Extraction		32
Working with Compressed Gases		35
Heating under Pressure		37
Stirring and Shaking		38
Determination of the Melting Point		40
B. ORGANIC ANALYTICAL METHODS		
Detection of Carbon, Hydrogen, Nitrogen, Sulphur, and the Halogens .		43
Organic Elementary Analysis		46
I. Determination of Nitrogen by Dumas' Method		47
II. Determination of Carbon and Hydrogen by Liebig's Method		55
III. Determination of Halogen, Sulphur, and other Elements		69
1. Determination of halogen by the Carius method, p. 69 ; 2. Argentometric determination of chlorine and bromine, p. 73 ; 3. Iodine determination by the Leipert-Münster method, p. 76 ; 4. Determination of sulphur by the Carius method, p. 77 ; 5. Determination of sulphur by combustion, p. 78 ; 6. Simultaneous determination of halogen and sulphur, p. 79 ; 7. Determination of other elements, p. 79.		
IV. Determination of Organic Groups		80
1. Volumetric determination of methoxyl and ethoxyl, p. 80 ; 2. Determination of the acetyl and benzoyl groups, p. 82 ; 3. Determination of active hydrogen by the method of Tschugaeff and Zerevitinoff, p. 84.		
V. Determination of Molecular Weight		86

x LABORATORY METHODS OF ORGANIC CHEMISTRY

C. PREPARATIVE PART

	PAGE
On the Prevention of Accidents	88
Equipment required by the Beginner	90

I. THE REPLACEMENT OF HYDROXYL AND HYDROGEN BY HALOGEN. ALCOHOLS AND OLEFINES

1. Ethyl bromide from ethyl alcohol	93
Methyl bromide, p. 95.	
2. Ethyl iodide from ethyl alcohol	95
Methyl iodide, p. 96.	
3. Benzyl chloride from toluene	100
4. Bromobenzene	103
p-Dibromobenzene, p. 105.	
5. Ethylene from ethyl alcohol. Ethylene dibromide	107
6. Glycol from ethylene dibromide	114
7. Isoamyl ether	117
8. Chloroacetic acid from acetic acid and chlorine	118

II. CARBOXYLIC ACIDS AND THEIR SIMPLE DERIVATIVES

1. Acid chlorides	121
(a) Acetyl chloride, p. 121; (b) Benzoyl chloride, p. 121; Acetanilide, p. 125; Benzoyl peroxide, p. 125.	
2. Acetic anhydride	126
3. Acetamide	129
Benzamide, p. 130.	
4. Urea and semicarbazide	131
(a) Potassium cyanate by oxidative fusion, p. 131; (b) Urea, p. 132; (c) Semicarbazide, p. 134; (d) Urea (and uric acid) from urine, p. 135.	
5. Nitriles	137
(a) Acetonitrile, p. 137; (b) Benzyl cyanide, p. 137.	
6. Hydrolysis of a nitrile to the acid. Phenylacetic acid	140
7. Esters	141
(a) Ethyl acetate from acetic acid and alcohol, p. 141, Ethyl benzoate, p. 141; (b) Isoamyl nitrite, p. 146, Ethyl nitrite, p. 147; (c) Ethyl nitrate, p. 148; (d) Hydrolysis of fat or vegetable oil, p. 149; Preparation of the free fatty acid, p. 150, Glycerol, p. 150; Analysis of fats, p. 151.	
8. Conversion of carboxylic acids into the next lower amines	152
(a) The Hofmann reaction. Methylamine from acetamide, p. 152; (b) The Curtius reaction, p. 153, Benzoyl azide, p. 153, Phenyl cyanate, p. 153, Phenylurethane, p. 154.	

III. NITRO-COMPOUNDS AND THEIR REDUCTION PRODUCTS

	PAGE
1. Nitromethane	156
Methylamine, p. 158, N-Methylhydroxylamine, p. 158, Methyl-nitrotic acid, p. 158, Silver fulminate, p. 159, Phenylnitroethylene, p. 160.	
2. Nitration of an aromatic hydrocarbon	161
(a) Nitrobenzene, p. 161; (b) Dinitrobenzene, p. 162.	
3. Reduction of a nitro-compound to an amine	165
(a) Aniline from nitrobenzene, p. 165, Diphenylthiourea, Phenylisothiocyanate, p. 169; (b) m-Nitraniline from m-dinitrobenzene, p. 171.	
4. Phenylhydroxylamine	174
<i>p</i> -Aminophenol, p. 176, Nitrosophenylhydroxylamine, p. 177.	
5. Nitrosobenzene	179
Nitrosobenzene from aniline and Caro's acid, p. 179, Azobenzene from aniline and nitrosobenzene, p. 181, Azoxybenzene from phenylhydroxylamine and nitrosobenzene, p. 182.	
6. Hydrazobenzene and azobenzene	183
(a) Hydrazobenzene, p. 183; (b) Azobenzene from hydrazobenzene, p. 184; (c) Benzidine from hydrazobenzene, p. 186. Mechanism of the reduction of nitrobenzene, p. 188.	

IV. SULPHONIC ACIDS

1. Benzene monosulphonic acid from benzene and sulphuric acid	191
Diphenylsulphone, p. 191, Benzenesulphonyl chloride, p. 192, Benzenesulphonamide, p. 192, Benzenesulphohydroxamic acid, p. 192.	
2. Toluene- <i>p</i> -sulphonic acid	193
3. Naphthalene- β -sulphonic acid	194
4. Sulphanilic acid from aniline and sulphuric acid	195
5. 2 : 4-Dinitro- <i>a</i> -naphthol-7-sulphonic acid (naphthol yellow <i>S</i>)	195
Thiophenol, p. 201.	

V. ALDEHYDES

1. Formaldehyde	203
Determination, p. 204.	
2. Acetaldehyde	205
(a) From ethyl alcohol, p. 205; (b) from acetylene, p. 209.	
3. Benzaldehyde from benzylidene chloride	209
Paraldehyde, p. 217, Metaldehyde, p. 217.	
4. Cannizzaro's reaction. Benzoic acid and benzyl alcohol from benzaldehyde	220

xii LABORATORY METHODS OF ORGANIC CHEMISTRY

	PAGE
5. Acyloin condensation. Benzoin from benzaldehyde . . .	222
Benzil from benzoin, p. 222, Benzilic acid, p. 225.	
6. Addition of hydrogen cyanide to an aldehyde. Mandelic acid from benzaldehyde . . .	227
7. Alanine . . .	229
8. Perkin's synthesis. Cinnamic acid from benzaldehyde and acetic anhydride . . .	232
Hydrogenation of cinnamic acid, p. 234, Sodium amalgam, p. 234.	
9. The Reimer-Tiemann synthesis. Salicylaldehyde from phenol and chloroform . . .	235
p-Hydroxybenzaldehyde, p. 236.	

VI. PHENOLS AND ENOLS. KETO-ENOL TAUTOMERISM

1. Conversion of a sulphonic acid into a phenol. β -Naphthol . . .	239
Phenyl benzoate, p. 241, Naphthyl benzoate, p. 242, Tribromophenol, p. 242.	
2. Methylation of phenols . . .	244
(a) Anisole, p. 244; (b) β -Naphthyl methyl ether, p. 244.	
3. Ortho- and para-Nitrophenols . . .	246
4. Kolbe's salicylic acid synthesis . . .	249
5. Synthesis of the ester of a β -keto-acid. Acetoacetic ester . . .	251
6. Acetylacetone . . .	252
Benzoylacetone, p. 253.	
7. Diethyl malonate . . .	254
Diethyl ethylmalonate, p. 254, Ethylmalonic acid, p. 255, Butyric acid from ethylmalonic acid, p. 265.	
8. Phenylnitromethane . . .	256
(a) <i>aci</i> -Phenylnitroacetonitrile sodium, p. 256; (b) Sodium salt of <i>aci</i> -phenylnitromethane, p. 256.	
On keto-enol tautomerism . . .	257
The use of ethyl acetoacetate and ethyl malonate for synthetic purposes . . .	264

VII. THE DIAZO-COMPOUNDS

General . . .	269
<i>A. Aliphatic Diazo-Compounds</i>	
1. Diazomethane . . .	271
Nitrosomethylurea, p. 271.	
2. Ethyl diazoacetate . . .	275
(a) Glycine ethyl ester hydrochloride, p. 276, Hippuric acid, p. 277; (b) Ethyl diazoacetate, p. 277.	

B. Aromatic Diazo-Compounds		PAGE
3. Diazotisation of aniline. Phenol, iodobenzene, and benzene from aniline. Isomerism of the diazo-compounds		281
(a) Preparation of a solution of a diazonium salt, p. 281; (b) Conversion of the diazonium salt to phenol by boiling the solution, p. 282; (c) Iodobenzene from aniline, p. 283, Phenyl iodochloride, Iodosobenzene, Iodobenzene, p. 284; (d) Benzene from aniline, p. 285; (e) Solid phenyldiazonium chloride, p. 286, Phenyldiazonium nitrate, p. 287, Phenyldiazonium perbromide, p. 289, Phenyl azide, p. 289; (f) Sodium p-nitrophenyl-anti-diazotate, p. 290.		
4. p-Tolunitrile from <i>p</i> -toluidine (Sandmeyer's reaction)		291
Benzonitrile, p. 292, <i>p</i> -Toluic acid, p. 292.		
5. Arsanilic acid from <i>p</i> -nitraniline		293
6. Phenylhydrazine		296
Benzene from phenylhydrazine, p. 299; Synthesis of indole, p. 299.		
7. Preparation of azo-dyes		300
(a) Helianthine, p. 300; (b) Congo red, p. 302; (c) 8-Naphthol orange, p. 303, Diazoaminobenzene and <i>p</i> -aminoazobenzene, p. 303.		
On the coupling reaction of the diazo-compounds		305

VIII. QUINONOID COMPOUNDS

1. Quinone from aniline		309
Quinol, p. 311, Anilinoquinone, p. 311, Quinhydrone, p. 314.		
2. <i>p</i> -Nitrosodimethylaniline		314
Dimethylamine and <i>p</i> -nitrosophenol, p. 316.		
3. <i>p</i> -Aminodimethylaniline		317
Wurster's red, p. 319, Bindschedler's green, p. 321, Methylene blue, p. 322.		
4. Basic triphenylmethane dyes		324
Malachite green from benzaldehyde and dimethylaniline, p. 324, Lead dioxide, p. 325.		
5. Fluorescein and eosin		326
Triphenylmethane dyes. Theoretical considerations		327
6. Alizarin		334

IX. THE GRIGNARD AND FRIEDEL-CRAFTS SYNTHESSES.
ORGANIC RADICLES

The Grignard Reaction

1. Preparation of alcohols		337
(a) Benzohydrol from benzaldehyde and phenyl magnesium bromide, p. 337; (b) Triphenylcarbinol from ethyl benzoate and phenyl magnesium bromide, p. 338.		
2. Synthesis of a ketone from a nitrile. Acetophenone		338

xiv LABORATORY METHODS OF ORGANIC CHEMISTRY

The Friedel-Crafts Synthesis

	PAGE
3. Synthesis of a ketone	343
(a) Benzophenone from benzoyl chloride and benzene, p. 343; the Beckmann rearrangement, p. 344; (b) Acetophenone from benzene and acetic anhydride, p. 346.	
4. Triphenylchloromethane from benzene and carbon tetrachloride	346
5. 2 : 4-Dihydroxyacetophenone from resorcinol and acetonitrile	347
6. Quinizarin from phthalic anhydride and quinol	348

Organic Radicles

7. Hexaphenylethane	352
8. Tetraphenylhydrazine	355
Diphenylnitrosamine, p. 357.	

X. HETEROCYCLIC COMPOUNDS

1. Pyridine derivatives	361
(a) Hantzsch's collidine synthesis, p. 361; (b) a-aminopyridine, p. 365.	
2. Quinoline	366
(a) Skraup's quinoline synthesis, p. 366; (b) Quinaldine synthesis of Doebner and Miller, p. 367.	
3. Indigo	369
Phenylglycine, p. 369, Indoxyl fusion, p. 369, Indigo vat, p. 372, Dehydroindigo, p. 374.	

XI. HYDROGENATION AND REDUCTION. OZONISATION

1. Catalytic hydrogenation with palladium	376
Preparation of palladinised animal charcoal, p. 378; Preparation of platinum oxide, p. 379.	
2. Catalytic hydrogenation with nickel. Cyclohexanol	379
Cyclohexane, p. 381.	
3. Replacement of the oxygen in carbonyl compounds by hydrogen. (<i>Reduction by Clemmensen's method</i>)	383
(a) Ethylbenzene from acetophenone, p. 383; (b) Dibenzyl from benzil, p. 383.	
4. Adipic aldehyde from cyclohexene by ozonisation	384

XII. NATURAL PRODUCTS

1. Furfural	386
2. d-Glucose from cane sugar	388
3. Hydrolysis of cane sugar by saccharase	388
4. β -Penta-acetylglucose and α -acetobromoglucose	390

CONTENTS

	xv
	PAGE
5. Lactose and casein from milk	391
Acid hydrolysis of casein, p. 392.	
6. <i>d</i> -Galactose from lactose	393
Mucic acid, p. 393, Pyrrole, p. 393.	
7. Octa-acetylcellobiose and cellobiose	394
Some remarks on carbohydrates	395
8. Saccharification of starch and alcoholic fermentation	401
9. <i>d</i> -Arginine hydrochloride from gelatin	404
10. Caffeine from tea	405
11. Nicotine from tobacco extract	406
12. Haemin from ox blood	407
Chromatographic adsorption of pigment from leaves	410
13. The chief constituents of ox bile	411
Glycocholic acid, p. 411, Cholic acid, p. 412, Desoxycholic acid, Fatty acids, and Cholesterol, p. 413.	
Hints for using the Literature of Organic Chemistry	419
Preparations from the Original Literature	422
Table for Calculations in the Determination of Nitrogen	424
INDEX	427
