PREFACE	VII
LIST OF PERIODICALS	XIII
OFFICIAL PUBLICATIONS	XVII
LIST OF COMMON ABBREVIATIONS AND SYMBOLS USED	XVII

Chapter I. The Preparation and Use of Isotopically
Labelled Organic *Compounds*

by H. R. V. ARNSTEIN

1. Introduction	1
a. Properties of Isotopes Used for Labelling Organic Compounds	2
b. The Assay and Detection of Stable and Radioactive Isotopes.	3
(i) Stable Isotopes, 3 - (ii) Radioactive Isotopes, 5	
2. The Synthesis of Isotopically Labelled Organic Compounds	10
a. Chemical Methods	14
(i) Synthetic ^{13}C and ^{14}C Compounds, 15 - (ii) Compounds with Isotopic Hydrogen, 27 - (iii) Compounds Containing Heavy Nitrogen, 29 - (iv) Compounds Containing Isotopic Oxygen, 30 - (v) Compounds Containing Isotopic Sulphur, 31 - (vi) Compounds Containing Isotopic Phosphorus, 32 - (vii) Compounds Labelled with Isotopic Halogens, 33	
b. Physical Methods.	35
(i) Production of Radioactive Organic Compounds with Recoil Atoms, 36 - (ii) Ionization Methods, 37	
c. Biosynthetic Methods	38
(i) Biosynthesis Using Intact Animals or Plants, 39 - (ii) Use of Isolated Animal and Plant Tissues, 39 - (iii) Microbiological Methods, 40 - (iv) Enzymic Syntheses, 40	
3 The Degradation of Isotopically Labelled Compounds	41
4. Applications of Isotopically Labelled Compounds	42
a. Biosynthetic and Metabolic Studies	42
(i) General Consideration of Methods, 42 - (ii) Metabolic Turnover and Pools, 46 - (iii) Examples of Biosynthetic Studies, 47 - (iv) Metabolic investigations, 52	
b. Reaction Mechanisms	52
(i) Chemical Reactions, 53 - (ii) Enzymic Reactions, 54	

c. Structural Investigations	56
d. Analytical Applications	57
(i) Isotope Dilution Technique, 57 - (ii) Labelled Reagents, 58 - (iii) Infra-Red Spectrometry, 59	

Chapter II. Natural Acetylenic Compounds

by L. CROMBIE

Introduction	60
Historical, 60 - Determination of Structure, 61 - General Synthetic Methods, 62	
1. Acetylenic Compounds from Higher Plants (Excluding Fats)	64
(i) Esters of Acetylenic Acids, 64 - (ii) Acetylenic Alcohols and Ketones, 66 - (iii) Acetylenic Hydrocarbons, 68 - (iv) Amides of Acetylenic Acids, 74	
2. Acetylenic Compounds from Fungi	77
3. Acetylenic Compounds from Natural Fats and Oils	84

Chapter III. Developments in Carbohydrate Chemistry

by G. O. ASPINALL

Introduction	90
Nomenclature of Carbohydrates, 90	
I. Monosaccharides and Their Derivatives	92
a. Pentoses	92
(i) Pentose Sugars, 92 - (ii) Deoxypentose Sugars, 92 - (iii) Dideoxypentose Sugars, 93 - (iv) Aminopentoses, 94	
b. Hexoses	96
(i) Branched Chain Hexose Sugars, 96 - (ii) 3-Hexuloses (Keto-hexoses), 97 - (iii) Deoxyaldohexoses, 97 - (iv) Deoxyhexuloses, 99 - (v) Dideoxyaldohexoses, 99 - (vi) Dideoxyhexulose, 101 - (vii) Trideoxyhexulose, 101 - (viii) Dialdohexose, 101 - (ix) Deoxyketoaldose, 101 - (x) Hexuronic Acids, 101 - (xi) Aminodeoxyhexoses, 102 - (xii) Aminodideoxyhexoses, 105 - (xiii) Aminotrideoxyhexoses, 107 - (xiv) Diaminodeoxyhexoses, 107 - (xv) Diaminotrideoxyhexose, 108 - (xvi) Aminodeoxyhexuronic acids, 108	
c. Heptoses	109
(i) Aldoheptoses, 109 - (ii) Ketoheptoses, 110 - (iii) Deoxyaldoheptoses, 111 - (iv) Dideoxyheptoses, 111 - (v) Trideoxyheptoses, 111 - (vi) Aminodeoxyheptoses, 112	
d. Octoses	113
(i) Aldo-octoses, 113 - (ii) Keto-octoses, 113 - (iii) Dideoxyketo-octoses, 114	
e. Nonoses	114
(i) Aldononose Sugars, 114 - (ii) Ketnononose Sugars, 115 - (iii) Amino-carboxydeoxynonuloses (Nonulosaminic Acids), 115	
2. Oligosaccharides	116
a. Disaccharides	118
(i) Pentosylpentoses, and Their Polymer Homologues, 118 [(1) Arabinosyl-arabinoses, 118 - (2) Xylosylxyloses, 118 - (3) Xylosylarabinoses, 119] - (ii) Hexosylpentoses, and Their Polymer Homologues, 119 - (iii) Pentosylhexoses, 120 - (iv) Deoxyhexosyldeoxyhexoses, 121 - (v) Hexosyldeoxy-	

hexose, 121 - (vi) Deoxyhexosylhexoses, 121 - (vii) Hexosyldideoxyhexose. 121 - (viii) Hexosylhexoses, 122 [(1) Glucosylglucoses, 122 - (2) Mannosylmannosen, 124 - (3) Galactosylgalactoses, 125 - (4) Galactosylglucoses and Glucosylgalactoses, 126 - (5) Mannosylglucoses, Glucosylmannoses and Galactosylmannoses, 127 - (6) Glucosylfructoses, 128 - (7) Galactosylfructose. 128 - (8) Fructosylglucose, 128 - (9) Fructosylfructose. 128 - (10) Glycosylketosides (Non-reducing), 129] - (ix) Diketose Dianhydrides, 129 - (x) Nitrogen-Containing Disaccharides, 130 [(1) Disaccharides Containing Amino-Sugar and Neutral Sugar Residues. 130 - (2) Disaccharides Containing Two Amino-Sugar Residues, 132 - (3) Disaccharides Containing Amino-Sugar and Hexuronic Acid Residues, 133] - (xi) Aldobiouronic Acids. 133	
b. Trisaccharides	134
(i) Reducing Trisaccharides, 134 [(1) Trisaccharides Containing One Constituent Sugar. 134 - (2) Trisaccharides Containing Two Different Constituent Sugars, 138 - (3) Trisaccharides Containing Three Different Constituent Sugars, 139] - (ii) Non-reducing Trisaccharides, 139 - (iii) Nitrogen-Containing Trisaccharides, 141	
c. Tetrasaccharides	141
(i) Reducing Tetrasaccharidea, 141 - (ii) Non-reducing Tetrasaccharides, 142	
d. Oligosaccharides from Human Milk	143
3. Glycosides of Polyhydric Alcohols	146
(i) Pentosylglycerols, 147 - (ii) Pentosyltetrarols, 147 - (iii) Hexosylglycerols, 147 - (iv) Hexosyltetrarols, 148 - (v) Hexosylpentitol, 149 - (vi) Hexosylcyclohexitol. 149 - (vii) Hexosylhexitols, 149 - (viii) Hexosylheptitols, 149 - (ix) Dihexosylglycerols, 150 - (x) Dihexosylhexitols, 150	
4. Polysaccharides	150
Determination of structure, 151	
a. Pentosans	154
b. Hexosans	155
(i) Polysaccharides Derived From D-glucose, 155 - (ii) Polysaccharides Derived From D-Fructose. Fructans, 160 - (iii) Mannans, 160	
c. Glycuronans (Polyuronides)	161
d. Complex Polysaccharides	161
(i) Neutral Group, 161 - (ii) Acidic Group, 163 - (iii) Amino-polysaccharides, 167	
5. Glycosides	168
Classification of Glycosides, 168	
a. Antibiotic Glycosides	169
b. C-Glycosyl Compounds	171
6. Isotopically Labelled Carbohydrates	180
Methods of Synthesis, 181 - Methods of Degradation. 182 - Tritium Labelled Carbohydrates, 184	

Chapter IV. The Structure of Proteins

by H. D. SPRINGALL

Introduction	185
1. Isolation	186
2. Proof of Purity of Isolated Specimen	187

3. Determination of Molecular Weight, Size and Shape.	187
4. Degradation and Analysis	189
(i) Drastic Degradation, 189 - (ii) Analysis, 189 - (iii) Milder Degradation; Residue Sequence Studies. 194	
5. Synthesis of Peptides	202
(i) Stepwise Synthesis, 202 - (ii) Polymerisation, 210	
6. Comparison of Synthetic and Natural Specimens	210
7. Conformations of Polypeptide Chains in Proteins	211
(i) Fibrous Proteins, 212 - (ii) Crystalline Globular Proteins, 217	
8. The Structure of Nucleoproteins	222

General Index to Vols. I-V

by R. E. FAIRBAIRN

Guide to the General Index	234
General Index	237
