PREFACE (A. J. C. Wilson)	xxxi
PREFACE TO THE SECOND EDITION (E. Prince) .. .	xxxi
PART 1: CRYSTAL GEOMETRY AND SYMMETRY	
1.1. SUMMARY OF GENERAL FORMULAE (E. Koch) .. .	
1.1.1. General relations between direct and reciprocal lattices	
1.1.1.1. Primitive crystallographic bases	
1.1.1.2. Non-primitive crystallographic bases	
Table 1.1.1.1. <i>Direct and reciprocal lattices described with respect to conventional basis systems</i>	
1.1.2. Lattice vectors, point rows, and net planes	
1.1.3. Angles in direct and reciprocal space.. .. .	
1.1.4. The Miller formulae	
1.2. APPLICATION TO THE CRYSTAL SYSTEMS (E. Koch)	
1.2.1. Triclinic crystal system.. .. .	
1.2.2. Monoclinic crystal system.. .. .	
1.2.2.1. Setting with 'unique axis b' '	
1.2.2.2. Setting with 'unique axis c' '	
1.2.3. Orthorhombic crystal system.. .. .	
1.2.4. Tetragonal crystal system	
Table 1.2.4.1. <i>Assignment of integers $s \leq 100$ to pairs h, k with $s = h^2 + k^2$</i>	
1.2.5. Trigonal and hexagonal crystal system	
1.2.5.1. Description referred to hexagonal axes	
1.2.5.2. Description referred to rhombohedral axes	
Table 1.2.5.1. <i>Assignment of integers $s \leq 100$ to pairs h, k with $s = h^2 + k^2 + hk$</i>	
Table 1.2.5.2. <i>Assignment of integers $s_1 \leq 50$ to triplets h, k, l with $s_1 = h^2 + k^2 + l^2$ and to integers $s_2 = hk + hl + kl$</i>	
1.2.6. Cubic crystal system	
Table 1.2.6.1. <i>Assignment of integers $s \leq 100$ to triplets h, k, l with $s = h^2 + k^2 + l^2$</i>	
1.3. TWINNING (E. Koch)	
1.3.1. General remarks.. .. .	
1.3.2. Twin lattices	
1.3.2.1. Examples	
Table 1.3.2.1. <i>Lattice planes and rows that are perpendicular to each other independently of the metrical parameters</i>	
1.3.3. Implication of twinning in reciprocal space	
1.3.4. Twinning by merohedry	
Table 1.3.4.1. <i>Possible twin operations for twins by merohedry</i>	
Table 1.3.4.2. <i>Simulated Laue classes, extinction symbols, simulated 'possible space groups', and possible true space groups for crystals twinned by merohedry (type 2)</i>	
1.3.5. Calculation of the twin element	
1.4. ARITHMETIC CRYSTAL CLASSES AND SYMMORPHIC SPACE GROUPS (A. J. C. Wilson)	
1.4.1. Arithmetic crystal classes	15
1.4.1.1. Arithmetic crystal classes in three dimensions.. .. .	15
1.4.1.2. Arithmetic crystal classes in one, two and higher dimensions	16
Table 1.4.1.1. <i>The two-dimensional arithmetic crystal classes</i>	15
1.4.2. Classification of space groups	20
Table 1.4.2.1. <i>The three-dimensional space groups arranged by arithmetic crystal class</i>	16

CONTENTS

1.4.3. Effect of dispersion on diffraction symmetry	21
1.4.3.1. Symmetry of the Patterson function	21
1.4.3.2. 'Laue' symmetry	21
Table 1.4.3.1. Arithmetic crystal classes classified by the number of space groups that they contain	20
References	21
PART 2: DIFFRACTION GEOMETRY AND ITS PRACTICAL REALIZATION	23
2.1. CLASSIFICATION OF EXPERIMENTAL TECHNIQUES (J. R. Helliwell)	24
Table 2.1.1. Summary of main experimental techniques for structure analysis	25
2.2. SINGLE-CRYSTAL X-RAY TECHNIQUES (J. R. Helliwell)	26
2.2.1. Laue geometry	26
2.2.1.1. General.. .. .	26
2.2.1.2. Crystal setting	27
2.2.1.3. Single-order and multiple-order reflections	27
2.2.1.4. Angular distribution of reflections in Laue diffraction	29
2.2.1.5. Gnomonic and stereographic transformations	29
2.2.2. Monochromatic methods	29
2.2.2.1. Monochromatic still exposure	30
2.2.2.2. Crystal setting	30
2.2.3. Rotationoscillation geometry	31
2.2.3.1. General.. .. .	31
2.2.3.2. Diffraction coordinates	31
2.2.3.3. Relationship of reciprocal-lattice coordinates to crystal system parameters	33
2.2.3.4. Maximum oscillation angle without spot overlap	33
2.2.3.5. Blind region	34
Table 2.2.3.1. Glossary of symbols used to specify quantities on diffraction patterns and in reciprocal space	32
2.2.4. Weissenberg geometry	34
2.2.4.1. General.. .. .	34
2.2.4.2. Recording of zero layer	34
2.2.4.3. Recording of upper layers	34
2.2.5. Precession geometry	35
2.2.5.1. General.. .. .	35
2.2.5.2. Crystal setting	35
2.2.5.3. Recording of zero-layer photograph	35
2.2.5.4. Recording of upper-layer photographs	35
2.2.5.5. Recording of cone-axis photograph	36
Table 2.2.5.1. The distance displacement (in mm) measured on the film versus angular setting error of the crystal for a screenless precession ($\bar{\mu} = 5^\circ$) setting photograph	35
2.2.6. Diffractometry	36
2.2.6.1. General.. .. .	36
2.2.6.2. Normal-beam equatorial geometry	36
2.2.6.3. Fixed $\chi = 45^\circ$ geometry with area detector	37
2.2.7. Practical realization of diffraction geometry: sources, optics, and detectors	37
2.2.7.1. General.. .. .	37
2.2.7.2. Conventional X-ray sources: spectral character, crystal rocking curve, and spot size.. .. .	37
2.2.7.3. Synchrotron X-ray sources	38
2.2.7.4. Geometric effects and distortions associated with area detectors	41
2.3. POWDER AND RELATED TECHNIQUES: X-RAY TECHNIQUES (W. Parrish and J. I. Langford)	42
2.3.1. Focusing diffractometer geometries	43
2.3.1.1. Conventional reflection specimen. $\theta - 2\theta$ scan	44
2.3.1.1.1. Geometrical instrument parameters	44
2.3.1.1.2. Use of monochromators	46
2.3.1.1.3. Alignment and angular calibration	46
2.3.1.1.4. Instrument broadening and aberrations	47
2.3.1.1.5. Focal line and receiving-slit widths	48
2.3.1.1.6. Aberrations related to the specimen	48

CONTENTS

2.3.1.1.7. Axial divergence	50
2.3.1.1.8. Combined aberrations.. .. .	50
2.3.1.2. Transmission specimen, θ - 2θ scan	50
2.3.1.3. Seemann-Bohlin method	52
2.3.1.4. Reflection specimen, θ - θ scan	53
2.3.1.5. Microdiffractometry	53
2.3.2. Parallel-beam geometries, synchrotron radiation	54
2.3.2.1. Monochromatic radiation, 8-20 scan	55
2.3.2.2. Cylindrical specimen, 2θ scan	57
2.3.2.3. Grazing-incidence diffraction	58
2.3.2.4. High-resolution energy-dispersive diffraction	58
2.3.3. Specimen factors, angle, intensity, and profile-shape measurement	60
2.3.3.1. Specimen factors.	60
2.3.3.1.1. Preferred orientation	60
2.3.3.1.2. Crystallite-size effects	62
2.3.3.2. Problems arising from the $K\alpha$ doublet	62
2.3.3.3. Use of peak or centroid for angle definition	63
2.3.3.4. Rate-meter/strip-chart recording	63
2.3.3.5. Computer-controlled automation	63
2.3.3.6. Counting statistics	64
2.3.3.7. Peak search	65
2.3.3.8. Profile fitting	66
2.3.3.9. Computer graphics for powder patterns	69
Table 2.3.3.1. Preferred-orientation data for silicon	61
Table 2.3.3.2. $R(\text{Bragg})$ values obtained with different preferred-orientation formulae	61
2.3.4. Powder cameras	70
2.3.4.1. Cylindrical cameras (Debye-Scherrer)	70
2.3.4.2. Focusing cameras (Guinier)	70
2.3.4.3. Miscellaneous camera types	71
2.3.5. Generation, modifications, and measurement of X-ray spectra	71
2.3.5.1. X-ray tubes	71
2.3.5.1.1. Stability	72
2.3.5.1.2. Spectral purity	72
2.3.5.1.3. Source intensity distribution and size	73
2.3.5.1.4. Air and window transmission	73
2.3.5.1.5. Intensity variation with take-off angle	74
2.3.5.2. X-ray spectra	74
2.3.5.2.1. Wavelength selection	75
2.3.5.3. Other X-ray sources	75
2.3.5.4. Methods for modifying the spectrum	75
2.3.5.4.1. Crystal monochromators	76
2.3.5.4.2. Single and balanced filters	78
Table 2.3.5.1. X-ray tube maximum ratings	72
Table 2.3.5.2. β filters for common target elements	78
Table 2.3.5.3. Calculated thickness of balanced filters for common target elements	79
2.4. POWDER AND RELATED TECHNIQUES: ELECTRON AND NEUTRON TECHNIQUES	80
2.4.1. Electron techniques (J. M. Cowley)	80
2.4.1.1. Powder-pattern geometry.. .. .	80
2.4.1.2. Diffraction patterns in electron microscopes	80
2.4.1.3. Preferred orientations	80
2.4.1.4. Powder-pattern intensities	80
2.4.1.5. Crystal-size analysis.. .. .	81
2.4.1.6. Unknown-phase identification: databases	81
2.4.2. Neutron techniques (A. W. Hewat)	82
2.5. ENERGY-DISPERSIVE TECHNIQUES	84
2.5.1. Techniques for X-rays (B. Buras and L. Gerward)	84
2.5.1.1. Recording powder diffraction spectra	84

CONTENTS

2.5.1.2. Incident X-ray beam	84
2.5.1.3. Resolution	85
2.5.1.4. Integrated intensity for powder sample	85
2.5.1.5. Corrections	86
2.5.1.6. The Rietveld method	86
2.5.1.7. Single-crystal diffraction	86
2.5.1.8. Applications	86
2.5.2. White-beam and time-of-flight neutron diffraction (J. D. Jorgensen, W. I. F. David, and B. T. M. Willis) ..	87
2.5.2.1. Neutron single-crystal Laue diffraction	87
2.5.2.2. Neutron time-of-flight powder diffraction	87
2.6. SMALL-ANGLE TECHNIQUES	89
2.6.1. X-ray techniques (O. Glatter)	89
2.6.1.1. Introduction	89
2.6.1.2. General principles	90
2.6.1.3. Monodisperse systems	91
2.6.1.3.1. Parameters of a particle	91
2.6.1.3.2. Shape and structure of particles	93
2.6.1.3.3. Interparticle interference, concentration effects	97
2.6.1.3.2.1. Homogeneous particles	93
2.6.1.3.2.2. Hollow and inhomogeneous particles.. .. .	96
2.6.1.4. Polydisperse systems	99
2.6.1.5. Instrumentation	99
2.6.1.5.1. Small-angle cameras	99
2.6.1.5.2. Detectors	100
2.6.1.6. Data evaluation and interpretation	100
2.6.1.6.1. Primary data handling.. .. .	100
2.6.1.6.2. Instrumental broadening – smearing	101
2.6.1.6.3. Smoothing, desmearing, and Fourier transformation	101
2.6.1.6.4. Direct structure analysis	103
2.6.1.6.5. Interpretation of results	103
2.6.1.7. Simulations and model calculations	103
2.6.1.7.1. Simulations	103
2.6.1.7.2. Model calculation	104
2.6.1.7.3. Calculation of scattering intensities	104
2.6.1.7.4. Method of finite elements	104
2.6.1.7.5. Calculation of distance-distribution functions	104
2.6.1.8. Suggestions for further reading	104
Table 2.6.1.1. <i>Formulae for the various parameters for h and rn scales</i>	92
2.6.2. Neutron techniques (R. May)	105
2.6.2.1. Relation of X-ray and neutron small-angle scattering	105
2.6.2.1.1. Wavelength	105
2.6.2.1.2. Geometry	106
2.6.2.1.3. Correction of wavelength, slit, and detector-element effects	106
2.6.2.2. Isotopic composition of the sample	106
2.6.2.2.1. Contrast variation	107
2.6.2.2.2. Specific isotopic labelling	107
2.6.2.3. Magnetic properties of the neutron	107
2.6.2.3.1. Spin-contrast variation	108
2.6.2.4. Long wavelengths	108
2.6.2.5. Sample environment	108
2.6.2.6. Incoherent scattering	108
2.6.2.6.1. Absolute scaling.. .. .	108
2.6.2.6.2. Detector-response correction	109
2.6.2.6.3. Estimation of the incoherent scattering level	109
2.6.2.6.4. Inner surface area	109
2.6.2.7. Single-particle scattering	110
2.6.2.7.1. Particle shape	110
2.6.2.7.2. Particle mass	110

CONTENTS

2.6.2.7.3. Real-space considerations	110
2.6.2.7.4. Particle-size distribution	111
2.6.2.7.5. Model fitting	111
2.6.2.7.6. Label triangulation	111
2.6.2.7.7. Triplet isotropic replacement	111
2.6.2.8. Dense systems	112
2.7. TOPOGRAPHY (A. R. Lang)	113
2.7.1. Principles	113
2.7.2. Single-crystal techniques	114
2.7.2.1. Reflection topographs	114
2.7.2.2. Transmission topographs	115
2.7.3. Double-crystal topography	117
2.7.4. Developments with synchrotron radiation	119
2.7.4.1. White-radiation topography	119
2.7.4.2. Incident-beam monochromatization	120
Table 2.7.4.1. <i>Monolithic monochromator for plane-wave synchrotron-radiation topography</i>	121
2.7.5. Some special techniques	121
2.7.5.1. Moire topography	121
2.7.5.2. Real-time viewing of topograph images	122
2.8. NEUTRON DIFFRACTION TOPOGRAPHY (M. Schlenker and J. Baruchel)	124
2.8.1. Introduction	124
2.8.2. Implementation	124
2.8.3. Application to investigations of heavy crystals	124
2.8.4. Investigation of magnetic domains and magnetic phase transitions.. .. .	124
2.9. NEUTRON REFLECTOMETRY (G. S. Smith and C. F. Majkrzak)	126
2.9.1. Introduction	126
2.9.2. Theory of elastic specular neutron reflection	126
2.9.3. Polarized neutron reflectivity	127
2.9.4. Surface roughness	128
2.9.5. Experimental methodology	128
2.9.6. Resolution in real space	129
2.9.7. Applications of neutron reflectometry	129
2.9.7.1. Self-diffusion	129
2.9.7.2. Magnetic multilayers	130
2.9.7.3. Hydrogenous materials	130
References	130
PART 3: PREPARATION AND EXAMINATION OF SPECIMENS	147
3.1. PREPARATION, SELECTION, AND INVESTIGATION OF SPECIMENS (P. F. Lindley)	148
3.1.1. Crystallization.. .. .	148
3.1.1.1. Introduction	148
3.1.1.2. Crystal growth	148
3.1.1.3. Methods of growing crystals	148
3.1.1.4. Factors affecting the solubility of biological macromolecules.. .. .	148
3.1.1.5. Screening procedures for the crystallization of biological macromolecules	150
3.1.1.6. Automated protein crystallization	150
3.1.1.7. Membrane proteins.. .. .	150
Table 3.1.1.1. <i>Survey of crystallization techniques suitable for the crystallization of low-molecular-weight organic compounds for X-ray crystallography</i>	149
Table 3.1.1.2. <i>Commonly used ionic and organic precipitants</i>	150
Table 3.1.1.3. <i>Crystallization matrix parameters for sparse-matrix sampling</i>	151
Table 3.1.1.4. <i>Reservoir solutions for sparse-matrix sampling</i>	152

CONTENTS

3.1.2. Selection of single crystals	151
3.1.2.1. Introduction	151
3.1.2.2. Size, shape, and quality	151
3.1.2.3. Optical examination	154
3.1.2.4. Twinning	155
Table 3.1.2.1. <i>Use of crystal properties for selection and preliminary study of crystals; morphological, optical, and mechanical properties</i>	153
3.2. DETERMINATION OF THE DENSITY OF SOLIDS	156
3.2.1. Introduction (P. F. Lindley)	156
3.2.1.1. General precautions	156
3.2.2. Description and discussion of techniques (F. M. Richards)	156
3.2.2.1. Gradient tube.. .. .	156
3.2.2.1.1. Technique	156
3.2.2.1.2. Suitable substances for columns	157
3.2.2.1.3. Sensitivity	158
3.2.2.2. Flotation method	158
3.2.2.3. Pycnometry	158
3.2.2.4. Method of Archimedes	158
3.2.2.5. Immersion microbalance	158
3.2.2.6. Volumetry	158
3.2.2.7. Other procedures	158
Table 3.2.2.1. <i>Possible substances for use as gradient-column components</i>	157
3.2.3. Biological macromolecules (P. F. Lindley)	159
3.3. MEASUREMENT OF REFRACTIVE INDEX (E. S. Larsen Jr. R. Meyrowitz. and A. J. C. Wilson)	160
3.3.1. Introduction	160
3.3.2. Media for general use	160
Table 3.3.2.1. <i>Immersion media for general use in the measurement of index of refraction</i>	160
3.3.3. High-index media	160
3.3.4. Media for organic substances	161
