

CONTENTS

One The Crystalline State	1
Two Lattice Geometry and Crystal Symmetry	19
Three Electrons in Metals	35
Four Alloys and Dispersions	59
Five Lattice Faults	87
Six Some Properties of Dislocations	109
Seven Experimental Approach	143
Eight Elastic Strain and Internal Stress	177
Nine Unidirectional Plastic Strain and Static Strength at Normal Temperature	197
Ten cyclic Strain and Fatigue Strength	255
Eleven Combined Unidirectional and Cyclic Strain	287
Twelve Deformation at Elevated Temperatures and Creep Strength	313
Thirteen Search for Strong Solids	351
Appendices	369
INDEX	379
