

CONTENTS

1. Solution and Solubility, Solubility and Supersolubility	1
2. The Artificial Preparation of Crystals	43
3. The Curie Theory of Crystal Growth	105
4. The So-Called Velocities of Growth	121
5. The Diffusion Theories	147
6. Recent Theories of Crystal Growth	169
7. Ideal and Real Grystals	225
8. Miscellaneous Types of Crystalization	254
9. Dissolution Phenomena	304
10. Crystal Habit Modification by Impurities	339
11. Relationship of Substances during Crystallization	388
12. Peculiarities of Crystal Growth	461
Appendix: Habit Modification in Crystals as a Result of the Presence of Impurities	529
Name Index	561
Subject Index	567
