PART I	INORGANIC INFRARED SPECTROSCOPY	1
	Introduction	3
	Applications of Infrared Spectroscopy to Mineral Studies	4
	Instrumentation and Experimental Techniques	5
	The spectrometer; Sampling techniques— sample selection, pressed discs, mulls, solid deposits, other techniques	
	Quantitative Analysis	9
PART II	SPECTRA-STRUCTURE AND GROUP FREQUENCY CORRELATIONS	11
	Binary compounds	14
	Halides; Oxides; Sulphides, selenides, tellurides and arsenides	
	Diatomic ions	15
	Cyanides; Hydroxides (and water)	
	Triatomic ions	16
	Linear YXY ions—uranyl; Linear XYZ ions—cyanates, thiocyanates; Bent XO <sub>2</sub> ions—metaborates, chlorites, nitrites	
	Four atom ions	19
	Pyramidal XO <sub>3</sub> ions—chlorates, bromates, iodates; sulphites and selenites, arsenites; titanates, stannates, niobates and tantalates. Planar XO <sub>3</sub> ions—borates; carbonates; nitrates	

<p><b>Five atom ions</b>                  Ammonium; Spinels; Arsenates, vanadates and phosphates; Sulphates; Selenates, tellurates and tantalates; Periodates and perchlorates; Oxyanions of the transition metals—tungstates, molybdates, perrhenates, pertechnates and permanganates; chromates and ferrates; Germanates</p>	<p><b>24</b></p>																																																																																												
<p><b>Silicates</b>                  Ortho and ring silicates (neso-, soro-, cyclo-); Chain silicates (ino-)—single chains, double chains; Sheet silicates (phyllo-)—clay minerals; Framework silicates (tecto-)—silica group minerals, feldspars</p>	<p><b>29</b></p>																																																																																												
<p><b>PART III EXPLANATORY NOTES AND DATA TABLES</b></p>	<p><b>35</b></p>
