

## CONTENT

	Page
1. Molecular Sieve Science and Technology: A Historical Perspective	1
2. Zeolites: Their Nucleation and Growth	11
3. Precursors in Zeolite Synthesis: A Critical Review	28
4. Structure and Properties of Aluminosilicate Solutions and Gels	49
5. Applications of NMR Spectroscopy to the Study of Zeolite Synthesis	66
6. Observed and Calculated Silicate and Aluminosilicate Oligomer Concentrations in Alkaline Aqueous Solutions	83
7. Influence of D <sub>2</sub> O and Alcohols on the Crystallization of Zeolites	98
8. Influence of Autocatalytic Nucleation on Zeolite Crystallization Processes	110
9. Role of Gel Aging in Zeolite Crystallization	124
10. Silicate Species with Cagelike Structure in Solutions and Rapid Solidification with Organic quaternary Ammonium Ions	140
11. Role of the Tetramethylammonium Cation in the Synthesis of Zeolites ZK—4, Y, and HS	152
12. Stabilizing Role of Linear Polyamines as Pore Fillers During the Crystallization of Zeolite NU—10	161
13. Zeolite Synthesis in the Presence of Fluoride Ions: A Comparison with Conventional Synthesis Methods	176
14. Cancrinite Crystallization from Alkaline Aluminosilicate Systems Containing Large and Small Cations	196
15. Nonaqueous Synthesis of Silica Sodalite	209
16. Contribution of Propylammonium Species to the Stabilization of the MFI-Type Structure	221
17. Effect of Gravity on Silicalite Crystallization	233
18. Crystallization of Pentasil Zeolite in the Absence of Organic Templates	244
19. Crystal Growth Regulation and Morphology of Zeolite Single Crystals of the MFI Type	257
20. Synthesis of Pentasil Zeolites With and Without Organic Templates	274
21. Synthesis of VPI—5	291
22. Synthesis of Microporous Silicoaluminophosphates in Hexanol-Water Biphasic Systems	305
23. Synthesis and Characterization of Metal Aluminophosphate Molecular Sieves	329
24. Significant Parameters in the Synthesis of Large Alkaline-Free MFI-Type Zeolites and AFI-Type Aluminophosphates	346
25. Disordered Pentasil-Type Borosilicates: Synthesis and Characterization	360
26. Isomorphous Substitution of Boron in Mordenite and Zeolite Y	374
27. Hydrothermal Isomorphous Substitution of Boron in Zeolite ZSM-5/Silicalite	393
28. Isomorphous Substitution of Iron in the Faujasite Lattice	405
29. Zeolite Chemistry: Substitution of Iron or Titanium for Aluminium in Zeolites via Reaction with the Respective Ammonium Fluoride Salts	420
30. High-Silica Faujasite by Direct Synthesis	436
31. Secondary Synthesis of Faujasitic Catalysts	448
32. Quadrupole Nutation NMR Studies of Second Generation Faujasitic Catalysts	465
33. Mechanism of Rapid Zeolite Crystallizations and Its Applications to Catalyst Synthesis	479
34. Kinetics and Mechanism of Crystal Growth of Zeolite Omega	493
35. Synthesis of the New Large-Pore Zeolite ECR—1	506
36. Directing Parameters in the Synthesis of Zeolites ZSM—20 and Beta	518
37. Synthesis and Characterization of Zeolite ZSM—20	544
38. Studies on the Kinetics of ZSM—23 Crystallization	560
39. High-Resolution Electron Microscopic Studies of Zeolite ZSM—48	574
40. Competitive Role of Organic and Inorganic Cations in Directing One-Dimensional Zeolitic Structures: ZSM—48 and EU—1	587
41. Phase Identification of Hydrothermal Crystallization Products from M <sub>2</sub> O—SiO <sub>2</sub> —SnO <sub>2</sub> —H <sub>2</sub> O Gels or Solutions	603
42. Computational Studies of Zeolite Framework Stability	617
