PART I

CONSIDERATIONS AND EQUIPMENT

Chapter

1	Preliminary Considerations	3
2	Practical Considerations	6
3	Apparatus and Equipment	11

PART II

METHODS—DESCRIPTION OF PRINCIPLES AND TECHNIQUES

4	Loss on Ignition	37
5	Decomposition of the Sample.	39
6	Determination of Silica	48
7	Determination of Alumina	56
8	Determination of Iron Oxide	66
9	Determination of Titania	71
10	Determination of Lime	72
11	Determination of Magnesia	77
12	Determination of Alkalis	81
13	Determination of Manganese Oxide	85
14	Determination of Chromic Oxide	86
15	Determination of Lead Oxide, Zinc Oxide, Stannic Oxide and Barium Oxide, particularly in the Analysis of Glazes	90
16	Determination of Zirconia	95
17	Determination of Borate	96
18	Determination of Fluoride	97
19	Determination of Sulphate	99
20	Determination of Phosphate	101
21	Determination of Soluble Salts	103
22	Determination of Lead Solubility of Frits and Glazes	105
23	Determination of Resistance to Acids and Acid Soluble Iron	106

PART III
METHODS OF ANALYSIS

		<i>Pane</i>
24	Stock Reagents; Prepared Reagents; Indicators; Standard Solutions	111
25	Analysis of High-silica Materials, Aluminosilicates and Aluminous Materials: Accurate Method	123
26	✓Analysis of High-silica Materials and Aluminosilicates: Spectrophotometric Method	133
27	Direct Determination of Alumina in High-silica Materials	146
	(A) Oxine Gravimetric Method	146
	(B) Oxine Spectrophotometric Method	148
	✓(C) EDTA Volumetric Method ✓	150
28	Direct Determination of Alumina in Aluminosilicates and Aluminous Materials	153
29	Analysis of High-silica Materials and Aluminosilicates: Rapid Method	155
30	Analysis of High-silica Materials, Aluminosilicates and Aluminous Materials: Classical Method	161
31	Analysis of "Pure" Alumina Materials (Containing more than 95% Al_2O_3)	173
32	Analysis of Chrome-bearing Materials	179
	(A) Classical Method	179
	(B) Direct Determination of Chromium Sesquioxide	189
	(C) Direct Determination of Ferric Oxide	190
	(D) Direct Determination of Alumina: Mercury Cathode Method	191
	(E) Routine Method for the Determination of Silica, Alumina, Manganese Oxide and Titania	194
	(F) Ion Exchange Method for the Determination of Chromium Sesquioxide, Silica and Lime	198
33	Analysis of Dolomites, Limestones, Magnesites and their Manufactured Products	203
	(A) Classical Method	203
	(B) Modification of Classical Method in the Presence of Chromium	210
	(C) Routine Method for Magnesites	212
34	Analysis of Zirconia, Zircon and Zirconia-bearing Refractories	220
35	Analysis of Frits and Glazes (Containing PbO and/or B_2O_3)	229
	(A) General Method	229
	(B) Specific Method for Lead Bisilicate Frits	245
36	Analysis of Bone Ashes	252

37	Notes on the Analysis of Cornish Stones	262
38	Determination of Alkalis .	266
	(A) Flame Photometric Method .	266
	(B) Lawrence Smith Procedure	270
39	Colorimetry and Methods of Calibration. .	273
40	Determination of Ferrous Oxide in High-silica Materials and Aluminosilicates	284
41	Determination of Sulphate in Silicate Materials .	286
42	Determination of Small Amounts of Fluorine in Silicate Materials	288
	(A) Pyrohydrolytic Method .	288
	(B) Chemical Method .	291
43	Determination of Carbon Dioxide (Carbonate) in Ceramic Materials	295
44	Determination of Small Amounts of Phosphate in Clays, etc.	297
45	Determination and Analysis of Soluble Salts in Clays and Bricks .	299
46	Determination of Lead Solubility of Frits and Glazes .	304
47	Determination of Resistance to Acids and Acid-soluble Iron	308
48	Possible Future Developments in Ceramic Analysis .	310
49	Rational Analysis	315
	APPENDIX: Some Specimen Analyses .	317
	Index	325
