

CONTENTS

<i>Chapter</i>		<i>Page</i>
I.	Experimental Methods	1
	<i>By G. W. BRINDLEY</i>	
	Bmic procedures, 3; comparison of photographic and diffractometer methods, 5; X-ray photographic techniques for clay-mineral studies, 7; X-ray diffractometer equipment for clay-mineral studies, 15; types of powder specimen, 17; X-radiation, filters, and monochromators, 22; evaluation of X-ray powder diagrams of clay minerals, 25; auxiliary techniques, 33; general techniques of clay-mineral study, 39; references, 45.	
II.	Kaolin, Serpentine, and Kindred Minerals	51
	<i>By G. W. BRINDLEY</i>	
	Basic structural features, 52; structure of kaolinite, 55; disordered kaolinite structures, 64; structure of halloysite, 68; structure of dickite, 77; structure of nacrite, 81; anauxite, 83; X-ray identification of the kaolin minerals, 84; the serpentine minerals, 88; the structure of amesite, 98; structure of cronstedtite, 102; structure of chamosite (berthierine) and greenalite, 104; nickel serpentines (garnierite), 109; tables of powder data, 111; references, 126.	
III.	Phase Changes which occur on Heating Kaolin Clays	132
	<i>By H. M. RICHARDSON</i>	
	Heat-treatment in the range 600–800°C, 132; heat-treatment in the range of 900–1400°C, 135; summary and conclusions, 141; references, 142.	
IV.	Montmorillonite Minerals	143
	<i>By D. M. C. MACEWAN</i>	
	Structure, 145; chemical constitution, 155; X-ray powder diagram, 164; interlamellar sorption and complex formation, 169; identification of montmorillonites, 183; effect of heat on X-ray diagrams, 188; tables of diffraction data, 191; references, 203.	
V.	Mica Clay Minerals	208
	<i>By W. F. BRADLEY and R. E. GRIM</i>	
	Structure of the micas, 209; polymorphism of the micas, 212; parameters: relations of structures to chemical compositions, 217; illite, 220; mixed-layer mica-montmorillonite minerals, 223; differential thermal analysis, 225; optical data, 228; chemical data, 230; cation-exchange capacity, 230; effect of heat on illite, 232; syntheses, 234; nomenclature, 236; tables of powder data, 237; references, 240.	

<i>Chapter</i>		<i>Page</i>
VI.	Chlorite Minerals	242
	<i>By G. W. BRINDLEY</i>	
	Structures of chlorites, 243 ; classifications of chlorites, 254 ; identification of chlorites by X-rays, 260 ; identification of chlorite species by X-rays, 266 ; relations between 146 and 76 structures: questions of nomenclature, 276 ; swelling chlorites and mixed-layer chlorites, 280 ; tables of powder data, 288 ; references, 293 .	
VII.	Vermiculite Minerals	297
	<i>By G. F. WALKER</i>	
	The magnesium-vermiculite structure, 299 ; powder data, 307 ; clay vermiculites and their identification, 311 ; tables of powder data, 319 ; references, 321 .	
VIII.	Sepiolite	325
	<i>By S. CAILLÈRE and S. HÉNIN</i>	
	General description, 326 ; structure of sepiolite, 326 ; formula and chemical composition, 332 ; X-ray powder and electron diffraction data, 336 ; behaviour on heating, 336 ; physicochemical properties, 338 ; table of powder data, 340 ; references, 342 .	
IX.	Palygorskite	343
	<i>By S. CAILLÈRE and S. HÉNIN</i>	
	General description, 343 ; structure of palygorskite, 344 , chemical composition, 346 ; physicochemical properties, 349 ; effect of heat, 360 ; table of powder data, 362 ; references, 363 .	
X.	Oxides and Hydroxides of Aluminium and Iron	354
	<i>By H. P. ROOKSBY</i>	
	Method of X-ray examination, 355 ; nomenclature, 357 ; preparation and identification of aluminium hydroxides, 358 ; the mono- hydrates of alumina; products of low temperature heat treatment of trihydrates, 360 ; the anhydrous forms of alumina, 363 ; natural and synthetic hydrated oxides of iron, 370 ; anhydrous oxides of iron, 372 ; effect of heat treatment on goethite and lepidocrocite, 376 ; delta ferric oxide, 378 ; the nature of laterites and bauxites, 379 ; methods for the removal of aluminium and iron oxides from clays, 382 ; tables of X-ray data, 384 ; references, 390 .	
XI.	Interstratified Clay Minerals	393
	<i>By D. M. C. MACEWAN, A. RUIZ AMIL, and G. BROWN</i>	
	Types of interstratification, 394 ; calculation of diffraction from mixed-layer structures, 397 ; the direct Fourier transform method, 418 ; mixtures of layers with different structure factors, 423 ; nomenclature of mixed-layer clays, 424 ; naturally occurring interstratified minerals, 425 ; interpretation of diffraction patterns of mixed-layer clays, 431 ; tables of powder data, 438 ; references, 444 .

XII. X-ray Diffraction by Layer Lattices with Random
Layer Displacements

446

By G. W. BRINDLEY

Diffraction from the standpoint of the reciprocal lattice, 447; **diffraction** by crystals of **finite** size, 451; X-ray **diffraction** from a crystal with randomly **displaced** layers, 462; X-ray powder diffraction **from** randomly **displaced** layer **crystals**, 453; the analytical procedure of **Brindley** and **Méring**, 456; effect of crystal size on diffraction by two-dimensional crystals, 467; examples of two-dimensional diffraction effects, 458; diffraction by partially disordered **minerals**, 462; references, 466.

XIII. Other Minerals

467

By G. BROWN

Silica, 467; titanium oxides, 469; **pyrophyllite** and talc, 469; **sulphide**, 469; carbonates, 469; **sulphates**, 470; phosphates, 470; **felspars**, 470; **firing** products, 472; tables of powder data, 473; references, 487.

XIV. Quantitative Analysis of Clay Mixtures

489

By G. W. BRINDLEY

X-ray diffraction by he-grained mixtures, 490; quantitative analysis of **mixtures**, 493; the choice of standard minerals. 501; general **procedures**, 509; references, 515.
